t was midnight some 175 years ago that a man rode through the countryside calling his neighbors to arms.

Freedom was at stake.

History with deadly finality records the outcome of the struggle set off by that ride-a struggle that ended in freedom for all the people of this country-a freedom we take too lightly today.

Maybe it's because 175 years is a long time and none of us can remember that far backmaybe it's because we have gotten used to this thing called freedom-maybe it's because we have had it so long we can't imagine life without it-maybe we believe we just cannot lose it.

But we can!

Today, the threat against the freedom of the American people is as great as it was that memorable night 175 years ago. In some sense greater. Guns do not threaten us-not yet at least-but an idea, a plan, artfully disguised, promises us the "secure" life.

What will it cost? Not much-just our freedom.

Now, let's forego all the high sounding language and get down to cases. What threatens our freedom?

The threat is two-fold . . . from the outside and from within. It isn't hard to identify the danger from the outside. Some twenty years ago, the leaders of Communism and Socialism brought their threats into sharp focus when they declared their operating policies for the future. Both contained a simple philosophy. Bore from withintake a little at a time. Usurp high office-guide the evolution until it becomes complete.

Has any of that happened?

The Communist trials in our country have been most revealing. Every day the press and radio tell us of new infiltration into high places. Nor have the ranks of labor escaped.

What about the inside?

That can easily be answered by another question. Do the American people have as much freedom of use of the money they earn as they did ten years ago? They do not! More people surrender a larger part of their money for tax use than ever before in history. More restrictions curb more people than ever before. More compulsion over the entire populace is advocated. It is a mounting trend becoming more inclusive every year. All of this is offered under the glib promise of liberating man from economic servitude-of a planned life-a total welfare.

So, we have the two threats . . . one from the outside and one from within.

It is doubtful that the American people are fearful that Communism will take over our country in the foreseeable future. It is doubtful too that they are unduly alarmed that Socialism as a method of government will replace our govern-

But, what they do not understand is that a creeping Socialistic pattern is spreading itself from within-that it can advance to a point from which there can be no retreat. Because this Socialistic pattern moves forward a little at a time, it is not spectacular enough to be recognized for the dangerous thing it is. It is so easy to accept glittering promises-broad generalities, that mask the eventual result.

So, what is to be done about it?

We believe the state of the nation calls for a Command Performance from Business-a performance to stop this creeping Socialistic pattern which threatens the freedom of all.

Why does business get the call? There are two reasons.

First, business should do this job because of its obligation to people. That is not a new contention at Ceco. For three years, Ceco has been advancing the thought that the prosperity and security of our nation are tied unremittingly to a four letter word W-O-R-K. Ceco has said and still says management must work more at managing. We believe this job is the most important task in the over-all concept of management. It is

or American Business

up to alert management to provide real security in the present, as well as the future, to prove that responsibility for economic welfare belongs in private, not in public hands.

The second reason is that business—business men—are the best qualified for the job because American business knows most about selling. Businesses grow because business men sell their product. Is merchandise more important than the system which produced it? Isn't the system worthy of our best selling talents too? Yes... Business must and should sell the idea that real security and freedom for all are possible only under a virile free enterprise system.

Business must expose the alluring misrepresentations that spawn the myth "you can get something for nothing." It must boldly proclaim the simple truism that welfare projects cost money-cost the people their own money. For government has no money except that which is given it by the people through taxes. It must show that excessive taxation is creating a competition to industry which is challenging its right to lead-its right to guarantee economic freedom to people. It must question the cost which could be more than money. Unchecked, taxes can bankrupt the people, bankrupt business, thus making it impossible for individuals acting in private capacities-for business, through free enterprise management-to provide jobs, improve working conditions, assure real security.

It was protest against excessive taxation that occasioned the midnight ride 175 years ago. Now, as then, the same danger threatens.

Yes, freedom is at stake!

Business must create a crusading attitude toward free enterprise. Here the problem is not simple. For lately, the people are taking lightly our system of private endeavor which has had a moving influence on life around the world and given us the highest living standards ever. They are "going along" thinking little of where it leads. They are not yet alarmed. Therefore, unreserved belief in that which we so casually call the American Way of Life must practically be revived. New vigor must fire appreciation of the system of individual effort and reward. There must be reaffirmation of faith in the dignity of man, in the real security to be found only in the individual acting in self-interest guided by conscience and a sense of fair play. All the people must be awakened. There must be 150 million individual crusades in this country, acting in concert, to keep the American Way of Life vital.

Business men must light the fire of a passionate belief within all the people—a belief in our way of life that burns brighter than any fanatical faith in the destiny of any other system.

Once the people know the danger, once their enthusiasm for incentive living reaches crusading fervor, they will know how to act. They will see through the will-o'-the-wisp promises of an inexhaustible public purse. They will recognize the fallacy of "something for nothing." Their "horse-sense" will renounce it. But to bring all this about, business men must become vocal. Each business must inform its own people. From little companies employing only a few, to big corporations employing many thousands. This program can succeed. The drift toward public dependency can be stopped but business men must be articulate and act decisively.

Mr. Chairman of the Board, Mr. President of Industry, Vice Presidents, Managers, yes—all of us—must get off of our pants and into the plants. We must meet with the people...talk with the people... work with the people. This isn't something that can be done by writing a check!

Let's accept this call for a Command Performance now! Today!! This very minute!!!

Combating a 12,000 gpm Corrosion Threat in the

"AIR-CONDITIONED CITY"

To completely air-condition the 1000-room Rice Hotel at Houston, Texas, 12,000 gallons of water per minute must be circulated between the engine room and the giant cooling tower on the roof of the hotel garage, 700 feet distant. To combat the inescapable corrosive attack, the engineers used Byers Wrought Iron plates in fabricating the 18-inch pipe which handles the flow. A substantial quantity of Byers Wrought Iron pipe was also supplied for cooling and condenser water lines within the hotel building.

Houston, which claims more airconditioning than any other city in the world except Washington, D.C. calls itself the "Air-Conditioned City". This concentration of installations gives engineers and users ample opportunity to determine the worth of various materials. It is significant that wrought iron appears in practically every specification.

The durability of wrought iron in services like these comes from the unusual character of the material. Tiny fibers of glass-like silicate slag, threaded through the body of high-purity iron, halt and "detour" corrosive attack. The fibers also anchor the initial protective scale, which shields the underlying metal just as a scab protects a wound.

If you are contemplating any airconditioning installations, or are concerned with the maintenance of any existing systems, you will find some helpful information on J. RUSS BATY, Architect on Hotel Garage; REG F. TAYLOR, Consulting Mechanical Engineer; CHAS. G. HEYNE & CO., Mechanical Contractors on Air Conditioning; KANE BOILER WORKS, Fabricators of 18" pipe; O. W. ROSIN, Chief Engineer, Rice Hotel.

JOHNSON BUILDS ANOTHER LANDMARK!

John A. Johnson & Sons, Inc. have long been recognized as builders of outstanding structures. Creating landmarks, meeting "impossible" deadlines, getting around "unsolvable" material shortages have become routine with Johnson in the course of more than 350 million dollars of construction. Pictured above is another Johnson "unusual"—the Syracuse Veterans Administration Hospital, largest building ever to be awarded for that city.

Never in its entire 125-year history has Syracuse seen a building as large as this new Veterans Hospital, now under construction by John A. Johnson & Sons, Inc. Also pictured below is the Veterans Hospital at Lebanon, Pa. This latter substantial contract has included the erection of several additional structures adjacent to the main hospital.

Johnson's success in erecting hospitals is duplicated in other public service structures, such as schools, institutions, urban and suburban housing projects, and entire communities, including utilities and all necessary facilities.

When new hospitals or extensions are contemplated, the tendency is to contact Johnson in the interest of efficiency, know-how, speed and economy. Let us show you why.

CONTINUED HIGH BUILDING VOLUME ESTIMATED; SOME ADJUSTMENT STILL EXPECTED

The old year closed at or near the peak of the renewed postwar construction boom which developed in the last five months of the year, Thomas S. Holden, president of F. W. Dodge Corporation, says.

Last year opened with market adjustment in full swing. In the past, Mr. Holden points out, such an adjustment following postwar price inflation has customarily been accompanied by a fairly severe recession in construction and in general business activity. In early 1949 the decline in construction volume was moderate and of short duration, but it was sufficient to arrest the upward trend of construction costs.

"It was apparently sufficient," Mr. Holden observes, "to convince the investing public by midsummer that costs had become relatively stabilized and no important advantage was to be gained by further deferment of needed projects."

Adjustment Factors Cited

The ease with which the market adjustment was accomplished is attributed by Mr. Holden to five main factors: (1) government supports for farm prices and industrial wage scales; (2) previous absence of speculation and absence of large-scale liquidation of private debt; (3) continued liberalization of home financing; (4) large-scale government spending; and (5) the inherent strength of the American economy.

This last factor, as reflected in the amazing postwar production performance of American industry and American agriculture, Mr. Holden sees as the most important of all.

Our economy produced in the year 1948 goods and services to the amount of \$179 billion, and approximately the same amount again in 1949. Mr. Holden estimates that \$43 billion of this staggering total represents improvement over the consumption standards of 1929, an earlier year of very high prosperity. Such improvement means more and better goods and services, because the figure was arrived at after making full allow-

ance for population and price changes since 1929.

At the same time, and in spite of record dollar volume of construction last year, new construction investment was less in proportion to national income than it had been in earlier years of great prosperity. Physical volume of construction also, with the exception of new dwelling units, was less than the total physical volume of those earlier boom years and less than the wartime peak volume of 1942.

Mr. Holden suggests that these comparisons indicate that the American people have the financial resources to invest even larger amounts in new construction than they did in 1948 and 1949.

Demand for new construction arises principally from the growth factors in the economy. Population growth, new family formations and migration of populations create demands for new housing facilities, new school buildings and other types of community facilities. New industries and new products require new industrial plants; new developments in transportation require ground facilities and terminal facilities.

Although growth factors were temporarily devitalized in the 1930's, this defeatism happily proved to be a temporary ailment, says Mr. Holden, and potentially, the United States has "the capacity to develop its material prosperity and its enormous productivity into a truly great civilization."

"Great civilizations," he adds, "are known to history by the quality and magnitude of their achievements in architecture, engineering and construction techniques."

What Blocks 1950 Upswing?

Consideration of the huge potential growth factors in our economy, Mr. Holden feels, may well prompt the questions: Why will not a considerable measure of this potential growth be realized in 1950? and why is construction volume not expected to increase substantially this year?

Among the lines of reasoning reported by Mr. Holden to underlie Dodge figures on the construction outlook, which estimated a 4 per cent decline from the 1949 total in dollar volume of contracts, are these:

First, the belief that in many respects the readjustments of last year were not fully realized in all lines of business and that readjustments will continue this year.

Government Impact Felt

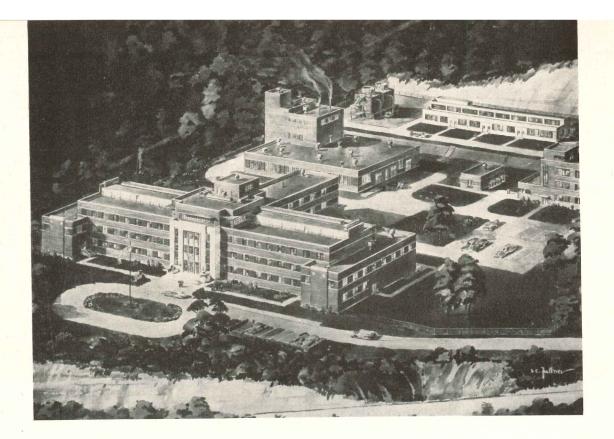

Second, the knowledge that the recent upsurge in construction was in large part stimulated by the federal government. Dollar volume of private contracts increased less than 2 per cent over 1948, but public construction contracts increased 26 per cent. Besides direct spending and large outlays for grants-in-aid, there was in midsummer a new injection of liberal home-financing credit to stimulate home building.

"It appears to be a deliberate policy of the federal government," Mr. Holden observes on this point, "to use every means at its disposal to maintain construction activity at something approximating the present high levels. Whether this policy is sound, from the point of view of the whole economy, and whether it can be continued indefinitely are questions open to argument."

Our high productivity and our great prosperity, Mr. Holden continues, can be attributed largely to our having invested in production facilities more capital per worker than any other people ever did.

Mr. Holden cites as "but one testimonial among many" to the industry's strength the report issued by a delegation of British industry construction people who visited this country last summer under the auspices of ECA. That report said the American construction industry is "at least 50 per cent more efficient" than Great Britain's.

It looks as though the construction industry will have another good year, Mr. Holden concludes.

BUILT FOR EXPANDING RESEARCH

The H. K. Ferguson Company, Engineers and Builders; Harry Porter, Project Architect

The main research building of a new organic chemicals research center for the Carbide and Carbon Chemicals Corp. has just been put into operation on its 140-acre tract near the company's South Charleston, W. Va., plant.

The new structure, first of five scheduled in the largest single laboratory project the corporation has ever undertaken, is equipped according to the most recently developed requirements for chemical research. The completed project will eventually house fundamental organic chemical and resin research, as well as process development work for the Chemicals Corp.

The laboratory building proper is designed as a three-story T-shaped structure of steel and brick, 325 ft long by 96 ft deep. It contains 69 individual laboratories and 48 offices, a large-scale laboratory, a large library, an audi-

torium seating 125, and necessary storage and service rooms. Now in operation also are a 40,000-lb-per-hr steam plant, a maintenance and equipment fabricating shop, and a cooling tower, all connected by subways carrying utility lines.

Complete air conditioning, vibration absorption, a multitude of safety devices, fluorescent lighting providing an average of 40 footcandles at all working levels are provided.

TITLE VIII PROGRAM MOVES SLOWLY

The desperate need for more adequate housing for military personnel throughout the world is claiming increasing attention. The Title VIII program enacted last year (Wherry Bill) will make some inroads on this complex problem but it is necessarily slow in getting started. As of Dec. 1, Federal Housing Administration had received application for loan insurance for only 5057 units of the rental-type construction, had written insurance on only 1000.

Confusion surrounded the initial phases of this program last fall and architects, along with others in the building industry, have been uncertain of procedures.

Each of the three services involved — Army, Navy and Air Force — has its own plan of operation. While there are varying degrees of centralization in Washington, architects interested in these housing projects can learn of them earlier by contacting field personnel.

The Navy, for example, recommends its projects through a chain of command starting with the local public works official at the yard or station location. This recommendation passes through the district public works office and then

By Ernest Mickel

to the Bureau of Yards and Docks in Washington. In the Army setup, the application originates with a housing officer at the camp, post or station, goes through the commanding officer, the Army Command and finally to Washington. The Air Force has a more centralized scheme, but early information on proposed projects originates at the field or base.

A prospective sponsor—a private contracting firm or experienced operative builder—may find himself in competition with others for the same project;

(Continued on page 182)

RICHMOND AND GOLDBERG AWARDED 1949 HARLESTON PARKER MEDAL

For excellence in the design and construction of the Southern Brookline Community Center, Temple Emeth," the Harleston Parker Medal for 1949 has been awarded to Isidor Richmond and Carney Goldberg, Architects and Engineers, of Boston. Established in 1921 by J. Harleston Parker of Parker, Thomas & Rice, the award is made at intervals of not more than three years for "the most beautiful piece of architecture, building, monument or structure within the limits of the City of Boston or of the Metropolitan Parks District." The Boston Society of Architects selects the recipient.

WINS AWARD
IN AUSTRALIA

This house designed by an architect for his own family has recently won for him the Sir John Sulman Medal given annually since 1932 "for the design of a building of exceptional merit" built in New South Wales or the Australian Capital Territory during the previous year. Overlooking a natural bush-covered valley, the house has pink tiles, grey walls and white accessories. Each room except bathroom and laundry faces north and has sunlight all day.

MEMORIAL STIRS CONTROVERSY

Lionel Freedman - Pictor

THAT old argument has a new storm center — and some very familiar protagonists.

Percival Goodman's design for a memorial for the 6,000,000 Jews killed in Europe (composite photos above) has the architect, the sponsoring committee and the New York City Department of Parks in battle joined over civic art.

The Museum of Modern Art has leaped to the fray by giving the model a month-long exhibition "to get the public reaction." A site for the memorial, on Riverside Drive at 84th Street, already has been dedicated as a gift from the city.

Is the controversy fresh evidence that the old guard never dies? Or is this a case where the esthetic truly has not been reconciled with the functional?

After failing to approve a group of

statuary sketched at their invitation by Jo Davidson, the committee invited designs from five artists: William Zorach, Chaim Gross and Leo Friedlander, sculptors; Eric Mendelsohn and Mr. Goodman, architects.

Mr. Goodman says the committee accepted his design subject to modifications in the sculptured parts and that the Department of Parks rejected it because of its severe, modern lines.

Administrative Chairman A. L. Lerner of the committee, the American Memorial to Six Million Jews of Europe, Inc., has said that although the directors favored the design they did not finally accept it.

For the Department of Parks, Executive Officer Arthur Hodgkiss explains that the Department rejected the design not because of its style but because

it would take up an inordinately large amount of space in one of the city's most crowded parks and because the candelabrum, set between the West Side Highway and Riverside Drive, might cause automobile accidents by attracting the eyes of drivers.

The beleaguered architect writes:

"The issue seems to me to be this: In general, the Department of Parks is interested . . . in a design that will stir no comment, awaken no feeling, positive or negative, arouse no interest. From this point of view, the best work would not be noticed at all as art, but as a mere decorative adjunct; and the best means to this is to approve only works like those that exist, that are, I fear deservedly, not noticed. But thus we shall never have a monumental art at all."

LARGEST SWEET'S FILE—ARCHITECTURAL IS DISTRIBUTED

The six volumes, 33 sections and 8400 pages of the 1950 Sweet's File — Architectural make the new file easily the largest collection of pre-filed manufacturers' catalogs ever put together. Nine hundred manufacturers are represented.

The idea of filing catalogs before distributing them so as to insure their maintenance and instant accessibility in users' offices was originated by Sweet's Catalog Service in 1905. The first file, cumbersomely titled "Sweet's" Indexed Catalogue of Building Construction for the Year 1906, comprised only one volume of 760 pages. Since then many new classifications have been added and the prefiling idea has extended to other fields — product design, engineering,

mechanical industries, power plants, etc. Distribution of the new Sweet's File —

Distribution of the new Sweet's File— Architectural is now being made to nearly 17,000 qualified architects, engineers, general building contractors, government offices and libraries.

Don't Trap Vapor in Walls!

HEAT FLOW thru space of NON-INSULATED WALL: Conduction 5% to 7%; Convection 15% to 28%; Radiation 65% to 80%.

Use an insulation which has zero permeability to vapor, is non-condensation forming, can retain no moisture, and will force out fortuitous vapor

Jo force out vapor, permeability of insulations should be AT MOST 1/5th that of outer walls. Otherwise, trapped inside walls, moisture REDUCES insulation values; and DAMAGES wood, plaster and paint.

Water vapor at 32°F has a volume 205,625 that of water. To prevent condensation, and allow for evaporation, a large space is needed between outer walls and insulations which permit vapor to flow through. Reducing the space or the temperature converts vapor to moisture, retains existing moisture.

Most "vapor barriers," asphalt paper for example, are only waterproof. Water molecules are too large to pass through the pores. But minute particles of gas, such as water vapor, sieve through and accumulate in wall spaces and in ordinary insulations. Vents at top and bottom have little value. Vapor travels the shortest distance to the cold wall and condenses.

Breaks in the outer wall, or infiltration under flanges because of vapor pressure, or seasonal changes of direction of heat flow and vapor, sometimes permit vapor or moisture to leak into the space between wall and insulation.

With Infra, they will be PUSHED OUT as vapor, gradually, through the outer walls by PRESSURE FROM WITHIN; because compared to Infra's ZERO PERMEABILITY to vapor, the outside walls have a substantial permeability. Infra Multiple Aluminum Accordion Insulation is also non-condensation-forming, and can retain no moisture.

THERMAL FACTORS, INFRA TYPE 4

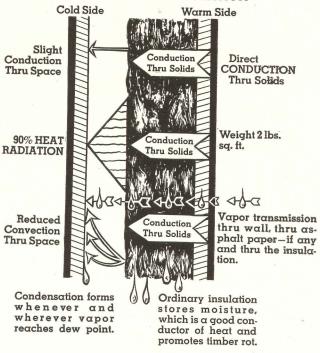

Down Heat C .064 equals 5" Dry Rockwool
Up Heat C .109 equals 3" Dry Rockwool
Wall Heat C .105 equals $3\frac{1}{7}$ " Dry Rockwool

Vapor Permeability equals ZERO

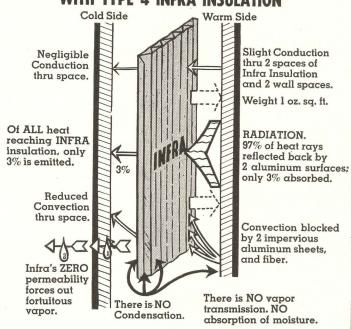

The cost of Infra Type 4 installed between wood joists, material and labor, should be under 8¢ sq. ft. in new construction.

PRORATING YOUR INCOME CAN EFFECT TAX SAVINGS

By Everett J. Mann, Certified Public Accountant

The tax relief under Section 107 of the Internal Revenue Code, as set forth in this article, has no relation to the Silverson Plan. The Silverson Plan is merely contemplated legislation which may some day become part of the tax laws. The tax relief herein described can be of immediate benefit to professional men who meet the qualifications.

An architect is often required to spend several years in working out and developing a project. Only when he has completed the work does he receive his fee, or the bulk of his fee. This has the effect taxwise of piling up income within one taxable year and causing his income to soar into higher brackets. The result is that he pays a much higher income tax than he would have paid had his income been received ratably over the period of his work.

Several years ago Congress recognized this inequity and drafted Section 107 into the Internal Revenue Code. Section 107 provides tax relief for any professional person who receives lump sum income in one year by allowing the individual to go back over a period of years and amend his tax returns for the period over which he did the work.

There are certain strings attached, of course, if one is to take advantage of this privilege. Specifically, there are three criteria imposed. First, the compensation received must be for personal services rendered. No architect should have any difficulty here. Secondly, the services rendered must have covered a period of at least 36 months; and, third, 80 per cent of the compensation for the work must have been received in one year.

Savings Through Income Proration

For the purposes of examining the practical effects of the law, let us assume that on Dec. 13, 1949, an architect receives a fee of \$45,000 for services performed over the period March 7, 1946 to Nov. 26, 1949. In passing, it should be noted that fractional months are disregarded unless the fractional period amounts to more than half a month. In

this event, the fractional period is considered equivalent to one month. In the situation just outlined, the architect has earned \$45,000 over a period of 45 months and is entitled to prorate his earnings as follows:

Year	Months	Amount
1946	10	\$10,000
1947	12	12,000
1948	12	12,000
1949	11	11,000
	· —	
	45	\$45,000

It can be seen that the proration of income is by actual months from the time the work was begun; it is not blanketed merely by calendar years. The architect in question may amend his 1946, 1947 and 1948 income by adding thereto the amounts shown above. He adds \$11,000 to his other 1949 income.

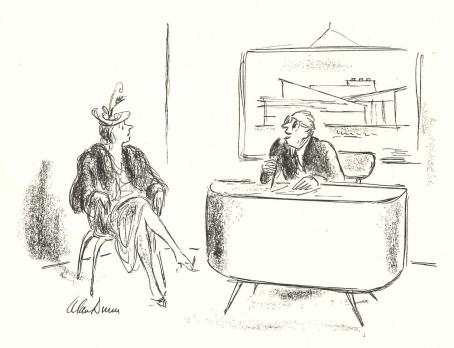

To illustrate the amount of tax savings possible, let us further assume that the architect had net taxable income, other than from that of the above fee, of \$10,000 per year in each of the years

1946, 1947, 1948 and 1949. The following table will show his net tax saving if he amends his prior year returns rather than including the entire \$45,000 in his 1949 income.

	Income Before	
	Proration	Tax
1946	\$10,000	\$ 2,508
1947	10,000	2,508
1948	10,000	2,303
1949	55,000	26,882
Total Tax		\$34,201
	Prorated	
	Income	Tax
1946	\$20,000	\$ 6,897
1947	22,000	7,961
1948	22,000	7,354
1949	21,000	6,862
Total Tax		\$29,074

From this example, it can be seen that a saving of \$5127 would result from amendment of former returns as against paying the tax on the income when received.

Make your projects pay of these successfu

Cash in on the sales success of these building projects! Equip your homes with the timesaving, worksaving, moneysaving advantages of the General Electric Complete Kitchen Package. Your houses will sell faster and you'll gain more prestige—as these delighted builders will tell you!!!

"Everything for approximately \$65.00 a month — includes taxes, interest, and principal." That's what attracted and sold prospects who saw this Oman & Sons home equipped with a complete General Electric Kitchen-Laundry!

"Sold 125 houses in 10 days!"

arthur H. Oman

 Mr. Arthur H. Oman of ARTHUR OMAN and SONS, Brockton, Massachusetts, says:

"We sold all the houses in ten days, due to the right combination of houses and appliances. Tens of thousands went through the Model Home . . . were favorably impressed with the complete line of General Electric appliances."

"We sold 54 the first week end!"

• Mr. J. J. Carey of Hutchinson and Carey, Denver, Colorado, says:

"We offered three bedroom houses for \$9850. The first week end we sold 54 and they have been moving steadily ever since.

"We feel that General Electric equipment contributed in a great measure to this successful operation."

General Electric range, refrigerator, automatic washer a steel cabinets are included in the \$9850 Hutchinson and Car homes. Today any home buyer can afford a G-E Kitch Laundry.

"A low-cost luxury home with fully equipped General Electric Kitchen worthy of a \$30,000 home!" That's how Kensington advertised and sold 250 \$9990 to \$10,990 houses in 10 days!

"Sold 250 houses in 10 days!"

Mathem Bricker Brasidant of VENICIAISTON

 Nathan Brisker, President of KENSINGTON ESTATES, INC., Brentwood, Maryland, says:

"The phenomenal success of our project, in our opinion, is due to a soundly built house well planned, good financing, and the complete General Electric Kitchen. The public deserves better living in the lower-priced home!"

builders do!!

"Sold our 67 houses the first Sunday!"

Caladia

 Mr. E. A. Ballin of Hewlett Harbor Construction, Inc., East Rockaway, L. I., N. Y., says:

"Our model house was featured in national magazines and thousands visited it. The item which caused the greatest comment was the G-E Kitchen. We sold the entire development—67 houses—the first Sunday!"

In the Ballin Houses there are complete General Electric Kitchens! Today it's possible for you to offer General Electric Kitchens at a price any homeowner can afford!

The buyer of this Spurr Home saves on operation and maintenance of efficient General Electric appliances...often enough to cover the slight increase in monthly payments.

"Sold not only the 40 houses, but 37 additional!"

 Mr. Mark S. Waggener, President of SPURR HOMES, INC., Denver, Colorado, says:

"We held open house for 3 days . . . sold not only the 40 houses under construction, but 37 additional on the basis of many factors in the house, particularly the General Electric Kitchen!"

"Sold 44 houses from 1 sample in 1 day!"

 Mr. Ralph Talbott, President of the Talbott Building Co., Baltimore, Maryland, says:

"We produced a sample home here with complete General Electric Kitchen... advertised it one Sunday. At the close of business we sold 44 houses to be built at Lochearn." (A week later a total of 71 houses were sold!)

Included in each of the 160 Talbott homes are the following: General Electric dishwasher and sink, 52-gallon electric water heater, electric range, Disposall® and cabinets!

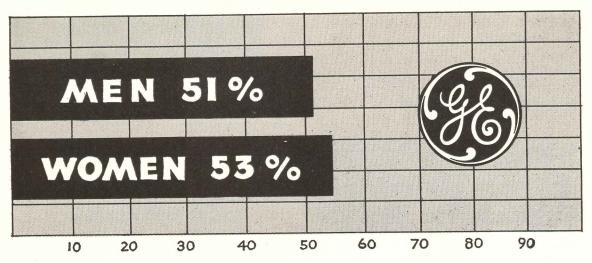

To help you sell more houses ... Z

General Electric offers you merchandising

High national acceptance for General Electric equipment means faster turnover for your homes!

People prefer General Electric appliances to all other brand names combined!

Join in . . . make the #1 winner work for you!

National surveys show that your prospects prefer General Electric appliances over all other brand names!

You owe it to yourself to take advantage of this high consumer preference . . . a preference that helps presell your houses.

a <u>Gomplang</u> program!!

Include electrical living for as little as \$4.80 a month!

You offer your prospects the added advantage of complete electrical living when you include the G-E Kitchen Package in the long-term realty mortgage.

Everyone who can afford a home can afford an extra few dollars a month for a General Electric Kitchen! Further, the economical operation, low maintenance and long life of General Electric appliances may offset the slight increase in monthly payments!

3

Tested builder advertising and promotion plans!

Your General Electric distributor is ready to offer you a complete merchandising program, supported by tested builder advertising and promotional material . . . all designed to help you sell your homes faster.

Make the most of these tested plans that have helped so many builders throughout the country. Contact the General Electric distributor in your area.

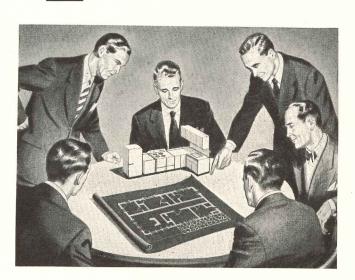

4

Architectural Consulting Service for you!

Visit the General Electric Home Bureau in Booths No. 74 and 75, and sit down with us at our roundtable. There will be General Electric planning experts there to talk with you about your 1950 projects.

Our Architectural Consulting Service, we believe, can be of great assistance to you in designing and improving kitchens and layouts for *your* houses!

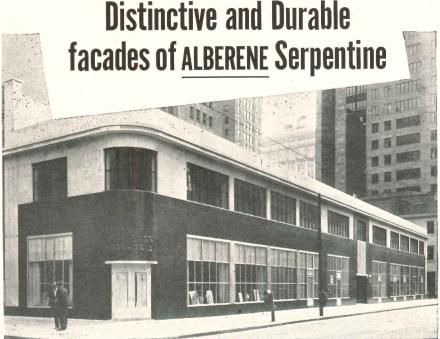

You've all to gain by bringing your house plans to Chicago. However, if you can't be at the Convention, contact your G-E distributor, or just address a note to us and we'll see that you receive all the facts you need. Home Bureau, General Electric Company, Bridgeport 2, Connecticut.

You can put your confidence in-

Flanders Bar & Grill, Philadelphia, Pa.; George W. Pepper, Jr., Architect.

You can count on attractive design effect and long-lasting service when you use *Alberene Virginia Black Serpentine*. The distinctive facades pictured above were built more than a decade ago, and they're still in excellent condition . . . still richly handsome in appearance.

You'll find Alberene Virginia Black Serpentine doubly economical—low in installation cost and free of maintenance expense. It can be cut into sections as thin as $\frac{7}{8}$ ", because it has great toughness and density. We'll be glad to send you a set of samples, conveniently boxed, showing the range of dark stones available from our quarries. Just write to—

THE RECORD REPORTS

(Continued from page 15)

Elections To Consider

A few technical details are perhaps necessary to clarify further the workings of Section 107. First of all, it should be noted that the right to amend prior year returns is an election, not a mandate, under the law. For instance, in the example cited above, if the architect had large 1949 losses from other ventures, he might be "tax wise" to include the entire \$45,000 in his 1949 income and not bother with amending his former returns. It is not always easy to say that the relief provided in the tax laws is the best individual solution. A careful computation of taxes must be made before deciding to amend former returns.

This gives rise to the further thought that most architects report their income on a cash basis — that is, they report their incomes in the year they are received in cash and deduct only those expenses paid in cash. This is contrary to the rule in most businesses, where tax returns are filed on the accrual basis. Thus, for the "cash basis" architect, although the income he earns may be prorated over a period of years, the expenses of producing that income are not prorated. He can control his expenses to suit his best interests. In the years when taxes are high, he can plan his expenditures and deductions to be at a maximum; in low tax years he can keep expenses at a minimum. By doing this, he secures the greatest tax advantages.

Time of Completion of Project

It often happens that the time of the completion of a work and its payment do not happen simultaneously. In that case, the event that takes place first controls the period over which income may be prorated. In the above case, assume that the architect was paid for his services on Aug. 18, 1948 instead of on Dec. 13, 1949 as originally supposed, or on Nov. 26, 1949, when his work was completed. Despite the lapse between the time of payment and the time of completion, the architect is entitled to prorate his income only over the 30month period from March 7, 1946 to Aug. 18, 1948. This would be at the rate of \$1500 a month. He may qualify for relief because his services were ac-

(Continued on page 21)

(Continued from page 20)

tually performed over a 45-month period even though he received his fee at a time when he had worked only 30 months.

On the other hand, if the architect were to be paid at any time after Nov. 26, 1949, possibly in a succeeding year, he is entitled only to a 45-month proration for the period March 7, 1946, to Nov. 26, 1949. His 1946, 1947, 1948 and 1949 returns are affected as shown by the first table above.

Others Eligible For Relief

If a partnership is in existence, all the partners are entitled to secure tax relief even though the services were performed by one of the partners. This would mean that the firm's partnership returns would have to be amended and all of the partners would have to file amended individual returns to reflect the differences in the partnership's income.

It is perfectly possible that an individual architect or a firm may have several jobs being completed in one year that are eligible to qualify for proration. In that case, some fairly complicated scheduling and computations might be necessary, but all of the jobs may be worked out on the prior year returns.

Ordinarily claims for tax refund are outlawed within three years after the returns have been filed. This is not true of income eligible for proration. Returns for as many as 20 years back may be opened up and income restated, if the taxpayer can show he was truly engaged in working on a job over this period of time.

Cautions To Be Observed

In conclusion, it should be reiterated that 80 per cent of the income from a job must be received in one year. If 79.9 per cent of the total fee is received in one year and 20.1 per cent in another, the privilege of proration is gone. By the unwise billing of jobs, substantial tax advantages may be sacrificed.

The task of securing tax relief under Section 107 may require many hours of computations and large consumption of midnight oil. At the same time, the tax relief that can be secured may offset even longer hours spent over a drafting board.

MODULAR PLANNING CITED AS

AID IN KEEPING COSTS DOWN

EXTENSIVE use of uninterrupted glass exterior walls and modular interior partitioning systems providing an unusual versatility of room arrangement helped the architects for this quarter-million-dollar Jewish Community Center in Englewood, N. J., to create a building with a variety of social, educational and recreational facilities at a cost far below that of the usual structure of this type.

In working out a suitable structural design, the architects and Structural Engineer Fred Severud considered all usual and several unusual methods of spanning large areas. These included laminated wood arches, metal and concrete rigid frames, etc. For this particular job it was determined that more conventional steel framing provided the least expensive and from the design point of view the most satisfactory method of enclosing the space.

The building will occupy a plot 125 ft by 345 ft adjacent to an existing small temple belonging to the same congregation.

Interior and exterior wood construction was found to be most economical. The auditorium portion will have steel framing and brick cavity walls. Precast concrete planks are used for the main auditorium roof. Briar Hill stone will be used on the front elevation only. Continuous strips of steel windows located between bearing wood mullions will contribute to good daylighting for classrooms, which have clerestory windows on the upper north wall for cross ventilation and augmented daylighting.

The auditorium, seating 700 and for use also as a gymnasium, will open off a 60 ft lobby. Mezzanine dressing rooms over the stage will serve as choir room and organ loft when the auditorium is used for high holiday services.

The school section, normally comprising six classrooms and a kindergarten, is designed as a modular system for flexibility to meet any change in space requirements. The kindergarten opens on an interior patio.

A youth game room 64 ft by 33½ ft is part of the social and recreational area in the basement, which also includes a special exercise room, a darkroom for camera enthusiasts, and an arts and crafts room.

BRAB WEATHER CONFERENCE

The first Research Correlation Conference of the Building Research Advisory Board held Jan. 11 and 12 in Washington was in the nature of an exploratory meeting designed to bring out what weather data is available, how this data is applied now and, more important, how it might be put to better use in the future and also what further data is needed.

The problem of designing the structure to fit the climate, as brought out by the speeches and panel discussions, can fairly well be divided into four main points.

First of all is climate itself, the climate of a fairly large area (macroclimate) and the climate of a site (microclimate). The more important of these to the designer, who needs more information on how to determine it, is microclimate. Second, there is greater availability than demand for existing weather data, and new methods of exploiting it are needed for determining durability of building materials and performance of climate control devices. Third, economics of construction must be considered as well as optimum design from the scientific angle. And fourth, people are looking for psychological satisfaction as well as thermal comfort in a structure.

Conference Chairman C. F. Rassweiler, who is BRAB Executive Committee chairman and vice president in charge of research for Johns-Manville Corp., opened the program and at the end summarized the results of the meeting from the standpoint of building technology. Francis W. Reichelderfer, chief of the U.S. Weather Bureau, summarized the conference for the weather sciences.

The conference led off with reports on recent climatological research by government and Army weather experts

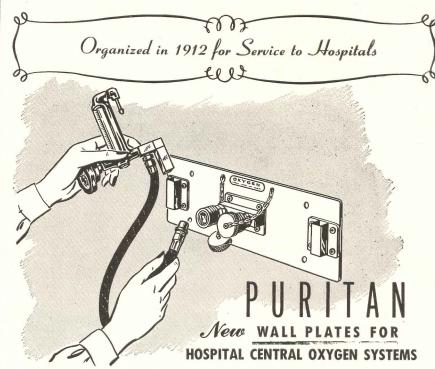

Dr. C. F. Rassweiler, Conference Chairman

including Dr. Paul Siple, U. S. Army General Staff military geographer and Dr. Helmut Lansberg, executive director of the Committee on Geophysics and Geography of the Research and Development Board.

Walter A. Taylor, director of the A.I.A.'s Department of Research and Education, was moderator for the discussion "Climate and the Design of Building," which included talks by James M. Fitch, architectural editor of House Beautiful, on "Buildings Designed for Climate Control," and by Dr. L. P. Herrington, director of research for the John B. Pierce Laboratory of Hygiene, on "Human Factors in Planning for Climate Control." Speakers in the discussion that followed were William B. Caudill, Robert W. Cutler, Carl Koch. Alfred B. Parker, Buford L. Pickens.

Taft-Hartley Results Called "Disappointing" to Builders

Counsel General Robert N. Denham of the National Labor Relations Board addressed some 1100 leaders in the building industry at the January 12 annual dinner of the Building Trades' Employers Assn. of New York City. Speaking on the application of the Taft-Hartley Act to the building industry,

Denham summarized: "It is pretty disappointing to find how little we seem to have accomplished (to achieve) a crystallization of official thought as to the meaning and intent of the law." "Difficulty in obtaining a divorcement of thinking . . . from (the) old Wagner Act formulae," "expectation that the Taft-Hartley Act would be repealed," and "honestly held conflicting opinions" were among the factors he advanced for

the present state of uncertainty. Many of the pitfalls for both labor and emplovers were stressed.

On the rosier side, Denham felt that before the end of 1950 there would be "some constructive decisions of the Courts" to clarify the situation. A tribute was paid the New York organization of contractors and labor to handle disputes, cited in a previous speech by Peter W. Eller, chairman of the BTEA Board of Governors. The group gave "a very real inspiration" for the National Joint (Dunlop) Board for the Settlement of Jurisdictional Disputes, Denham added. Since the forming of this board in 1948, "losses to builders and employees throughout the nation . . . from work stoppages based on jurisdictional disputes . . . have been reduced to less than 10 per cent of (those before) the Taft-Hartley Act went into effect."

Earlier that same day, the New York Building Congress met to hear Nelson Rockefeller speak on "The Growth of the Community." Architect Louis Skidmore, president of the Building Congress, presided at the meeting.

Mr. Rockefeller was introduced by Architect Wallace K. Harrison, Honorary Chairman, who cited the large volume of construction done by Rockefeller, particularly in South America. Beginning with a discussion on Rockefeller Center, Mr. Rockefeller continued with comments on the operation of the community as it applies to the world and our special obligations of today.

ASHVE MEETS IN DALLAS

The American Society of Heating and Ventilating Engineers held its 56th annual meeting in Dallas, Texas, January 22-26. Highlighting the five-day meeting was a series of technical sessions devoted to discussing new developments in the field.

The first session covered night-air cooling and a physiologic examination of the effective temperature index. Topics of interest in the following meetings included heat pump performance, solar heating and baseboard radiation. Panel heating and cooling were analyzed from such varied aspects as heat flow within concrete panels and effect of panel location on skin surface temperature.

C. Rollins Gardner was general chairman of the committee on arrangements.

Acres of Diamonds

You see only the structures of commerce, soaring skyward... the strange new shapes of industry stretching beyond. Yet all around you are acres of diamonds. Diamonds that identify the thousands of Jenkins Valves on duty in the many different types of buildings essential to modern civilization.

Nothing holds its value like the diamond, in valves as in gems. Four generations of American builders have placed their trust in the Jenkins diamond and signature trade mark. Today, as in 1864, Jenkins Valves are the choice of men who plan shrewdly, always with an eye to future maintenance and operating costs.

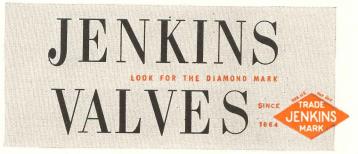

They know that Jenkins builds extra endurance into Valves — proved by long life and low upkeep cost

records in every type of service. They know, too, that there is extra value in the *experience* Jenkins Valve specialists can apply to any question of selection, installation, or maintenance.

You pay no more for Jenkins Valves, despite their superior quality and service. So why not let the Jenkins diamond serve as your guide to valve economy... for new installations, for all replacements. Sold through leading Industrial Distributors everywhere.

1935	95.1	90.1	104.1	108.3	105.4	89.5	84.5	96.4	103.7	99.7
1930	108.9	108.3	112.4	115.3	111.3	90.8	86.8	100.4	104.9	100.4
1925	118.6	118.4	116.3	118.1	114.4	91.0	86.5	99.5	102.1	98.0

The index numbers shown are for combined material and labor costs. The indexes for each separate type of construction relate to the United States average for 1926–29 for that particular type — considered 100.

Cost comparisons, as percentage differences for any particular type of construction, are possible between localities, or periods of time within the same city, by dividing the difference between the two index numbers by one of them; i.e.: index for city A = 110index for city B = 95

(both indexes must be for the same type of construction).

Then: costs in A are approximately 16 per cent higher than in B.

$$\frac{110-95}{95} = 0.158$$

Conversely: costs in B are approximately 14 per cent lower than in A.

$$\frac{110-95}{110} = 0.136$$

Cost comparisons cannot be made between different types of construction because the index numbers for each type relate to a different U. S. average for 1926–29.

Material prices and wage rates used in the current indexes make no allowance for payments in excess of published list prices, thus indexes reflect minimum costs and not necessarily actual costs.

These index numbers will appear whenever changes are significant.

STANWORTH, Princeton, N. J. (Below) Comprises 23 one and two-story garden-type apartment buildings, designed to harmonize with surrounding fine private homes. Architects: Holden, McLaughlin and Assoc. Gen. Contractors: Wm. L. Crow Const. Co. Floor Contractors: Builders' Wood Flooring Co.

MANHATTAN HOUSE, New York City When completed in 1950, will contain 582 apartments in a 19-story and penthouse building occupying an entire block. Associated Architects: Mayer & Whittlesey—Skidmore, Owings & Merrill. General Contractors: Cauldwell-Wingate Co. Floor Contractors: Builders' Wood Flooring Co.

FRESH MEADOWS, Queens, Long Island A modern residential community of 3,000 apartments in 138 two and three-story and two thirteen-story structures. Architects: Voorhees, Walker, Foley and Smith. Gen. Contractors: George A. Fuller Co. Floor Contractors: Builders' Wood Flooring Co.

Ho Bruce Block Hardwood Floors

The apartment developments of the New York Life Insurance Company, pictured above, vary widely in location, architecture, planning, size, and rental rates. But, in all three, ideas and materials have been used which provide beautiful, modern apartments for tenants and sound investment value for the owners.

Take the floors, for example. In Fresh Meadows, Stanworth, and Manhattan House, Bruce Blocks give rooms the natural, friendly beauty of hardwood plus decorative modern design. These floors are beautiful and stylish, yet so homelike and livable. They are warm, quiet and comfortable underfoot . . . and are easy to keep clean and shining at all times.

These solid hardwood floors are thrifty for owners because they last the life of the building. Even after many years of hard service, all their original beauty can be restored by refinishing.

Used in 9 out of 10 largest apartment projects

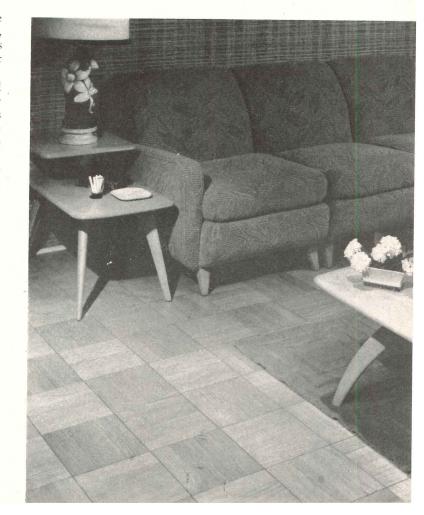

Bruce Hardwood Blocks have been selected for 9 out of 10 of the nation's largest apartment developments owned and operated by life insurance companies. Over 100,000,000 sq. ft. have been used in apartments, homes, offices, schools and stores from New York to California. This hardwood flooring is particularly adapted to modern construction because it can be laid in mastic directly over concrete, without wood subfloor or screeds.

See our catalog in Sweet's Files, and write for new full-color booklet on "Modern Hardwood Floors."

TWO ON HOSPITALS

Design and Construction of General Hospitals. The Modern Hospital Publishing Co., Inc. (919 N. Michigan Ave., Chicago 11, III.), 1949. 110 pp., 8¾ by 11½ in.

This collection of articles originally published in "The Modern Hospital" is intended, according to an introductory statement, to give hospital architects "the same familiarity with hospital functioning that they would have if they worked on the floors and in the kitchens, boiler room, laundry, and other hospital departments."

Although no architect could qualify for a nurse's aide certificate on the basis of his reading of this book alone, many will find here in convenient form a great deal of general information about hospital procedure as it affects building design. The flow charts, area tables, and equipment schedules should be particularly useful for check-list purposes.

Washington State Hospital Study: A Guide to Expanding Hospital Service. Washington State Department of Health (Smith Tower, Seattle, Wash.), 1949. 79 pp., 8½ by 11 in.

Methods being used in the State of Washington for determining specific hospital and public health service needs are set forth in this report, which is intended to explain criteria for allocating the federal funds for hospital construction available to the states through the Hospital Survey and Construction Act, Public Law 725. Aside from its interest as a survey document, this report presents study methods of interest to all planners of hospital service.

TWO ON FURNITURE

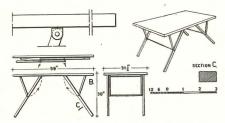

Modern Furniture. By Mario Dal Fabbro. Reinhold Publishing Corp. (330 West 42nd St., New York 18, N. Y.), 1949. 11½ by 8¾ in. 174 pp. illus. \$5.00.

Furniture Forum. Published quarterly by Phillip L. Pritchard, 254 West 54th St., New York 19, N. Y., 8½ by 11 in., 64 pp., illus. \$4.50 per year.

Mario Dal Fabbro, ex-Italian furniture designer now in the U.S.A., has produced his first American book—probably not his only one, if his future work can be predicted from his past.

This venture is at least refreshing: mostly drawings which have a flavor foreign to this country, it shows us what the furniture of several designers looks like when viewed by an ex-Italian.

Perhaps half a dozen American designers' chairs, tables, cabinets, stools, etc. are included; the remainder are Italian or Swiss, with a few pieces of Swedish, English, or German origins. The drawings are quite carefully accurate, and at first glance convey the impression of full detail; over-all dimensions are given for each piece; but close examination reveals that in actuality the details which matter are appallingly absent. There is great preoccupation with the mechanical operation of the

One of the diagrams from "Modern Furniture" by Mario Dal Fabbro

furniture; everything tilts or hinges or folds or demounts or collapses - one hopes not accidentally. All this is indicated with lots of arrows. When one tries to ferret out the design of a joint, however, to see just how that surface is continued so sleekly from a vertical plane around a corner and over a horizontal — well, none but the most obvious are included. (Perhaps furniture designers and manufacturers consider these trade secrets.) There is almost no upholstered furniture. Nor are there any notes on the specific materials, colors, or finishes: wood is wood, metal metal, cloth cloth, and that's that.

In the back of the book are 16 simple pieces laid out for the amateur craftsman to build. Here the details are fairly complete, although the hatracks and night tables shown are not much advanced over the projects built in the average high school manual arts class. Indeed, the examples so carefully selected throughout the entire book have the spindle-legged, delicate, too-nicely-

balanced look of much contemporary Italian work. There is a faint odor of decadence about them — or does this come from the style of drawing? Surely not all of Charles Eames', George Nelson's, or even Mario Dal Fabbro's furniture has exactly that unsubstantial quality.

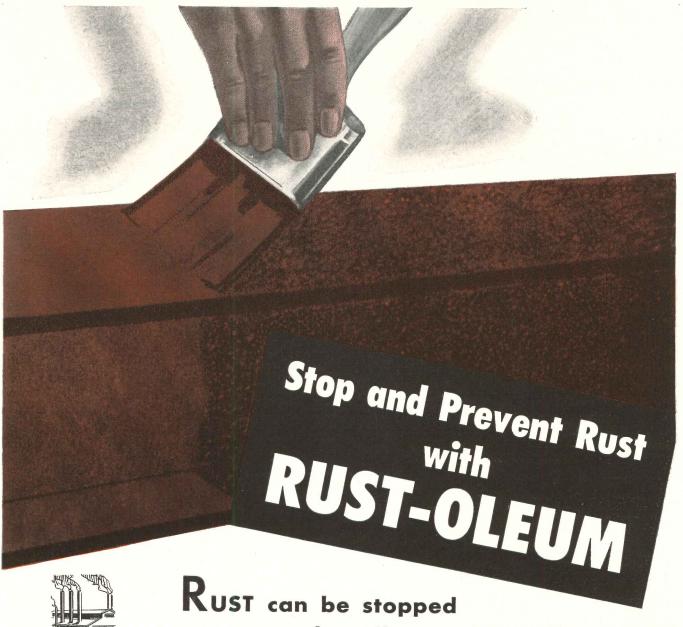

In contrast, "Furniture Forum," a quarterly started in 1949, contains a nearly complete presentation of good contemporary American furniture, plus several of the standard modern fabrics, accessories, and lamps. In reality a catalog obtainable by subscription, this publication contains not only photographs of all pieces, their prices, dimensions, species and finishes of wood, colors, fabrics, etc.; it also includes thumbnail biographies of the designers, and addresses of both manufacturers and retailers. The more recent issues include brief articles by designers in various fields. These aren't long, and every designer has pet subjects concerning which he can often write entertainingly and sometimes profoundly. But even though this reviewer agrees thoroughly with Alvin Lustig, for instance, when that able dialectician squares off versus the current preoccupations with superflexibility and super technology, is a catalog the place for expressions of opinion? Aside from this, and an occasional bit of typography so carefully designed as to be unreadable, the quarterly catalog deserves a big hand. We venture the guess that it would save every architect who buys furniture for his clients many times the cost of a subscription.

NEW EDITIONS

Architectural Practice. By Clinton H. Cowgill, A.I.A., and Ben John Small, A.I.A. Reinhold Publishing Company (330 West 42nd St., New York 18, N. Y.), Revised Edition, 1949. 8¾ by 11½ in. 422 pp. illus. \$12.50.

Originally published in January, 1948, this manual for the practicing architect has now been brought up to date with recent changes in registration requirements, new sample examinations, and new material on professional liability insurance in the contracts section. Two new features are the results of a study (Continued on page 30)

ARCHITECTURAL RECORD

... stopped easily, surely, economically!

RUST-OLEUM is the answer. For 25 years it has proved its capacity to stop and prevent rust at sea, in fume-choked industrial areas, on railroad rolling stock, bridges and signaling equipment.

RUST-OLEUM . . . an exclusive formula . . . protects metal with a tough, long-lasting pliable film that dries to a hard, firm finish that defies rain, snow, salt air, fumes and weathering. It adds years of extra use to metal roofs, tanks, sash, fences, stacks, gutters, downspouts, machinery and other metal surfaces.

RUST-OLEUM decorates as well as protects. It is available in all colors, aluminum and white. It can be applied to metal where rust has already started. You don't have to remove all the rust.

RUST-OLEUM is stocked and sold by Industrial Distributors in most principal cities. See our complete catalog in Sweets, or write for full information.

of the rating of architects and draftsmen made by the Michigan Society of Architects, and the findings of a survey on product specification.

Planning: The Architect's Handbook. By S. Rowland Pierce and Patrick Cutbush. Hiffe & Sons, Ltd. (Dorset House, Stamford St., London S.E. 1, England), Sixth Edition, 1949. 8½ by 10¾ in. 487 pp. illus. 21 s.

Many sections of the book have been enlarged in this new Sixth Edition, and the page size has been reduced, making the volume easier to handle.

The Autobiography of An Idea. By Louis H. Sullivan. Peter Smith (321 Fifth Ave., New York 16, N. Y.), Third Printing, 1949. 5½ by 8½ in. 330 pp. \$3.50.

The publication of Frank Lloyd Wright's *Genius and the Mobocracy* makes timely this new printing of the Sullivan apologia, made from the original 1924 plates by arrangement with the American Institute of Architects.

PIONEER ARCHAEOLOGIST

Frederick Catherwood Archt. By Victor Wolfgang von Hagen, with introduction by Alaous Huxley. Oxford University Press (114 Fifth Ave., New York 11, N. Y.), 1950. 6 by 9 1/4 in. 177 pp. + 31 plates. \$5.00.

Best known for his drawings of Mayan culture, the British artist and archaeologist Frederick Catherwood seems to have pursued a career of unique accomplishments coupled with a strange fate of misfortune and obscurity.

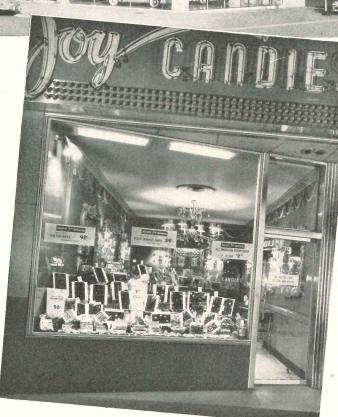

With the noted explorer John Lloyd Stephens he published the first authentic accounts of Mayan culture in their two books on "Incidents of Travel" and in his own book, "Views of Ancient Monuments," all appearing in the mid-1840's. More than a dozen years' study in Rome, Greece, Egypt and the Holy Land enabled him to place his Central American discoveries both in time and in origin with an accuracy supported by later research.

Mr. von Hagen has put together from almost non-existent records an interesting account of this strange figure who also built for New York its first Panorama and for South America its first railroad. Inclusion of the Introduction and 25 lithographs of the "Views" adds a flavor of Catherwood's individuality.

HOMES WITH A FUTURE HAVE TELEPHONE RACEWAYS

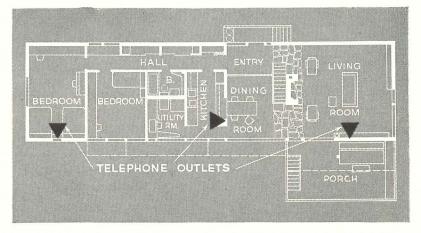

Modern home planning considers the future as well as the present needs of the owner. Telephone raceways conceal telephone wires within walls. They also provide for the relocation or addition of telephones later on.

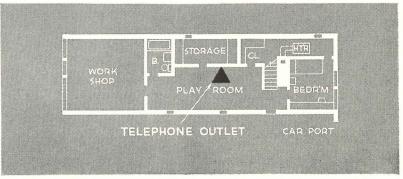

It's easy and inexpensive to provide for telephone facilities during construction. A few lengths of pipe or tubing placed in the walls will carry telephone wires to outlets located at key points throughout the house.

Your Bell Telephone Company will be glad to co-operate in planning telephone raceway systems. Just call your nearest telephone company Business Office and ask for "Architects and Builders Service."

BELL TELEPHONE SYSTEM

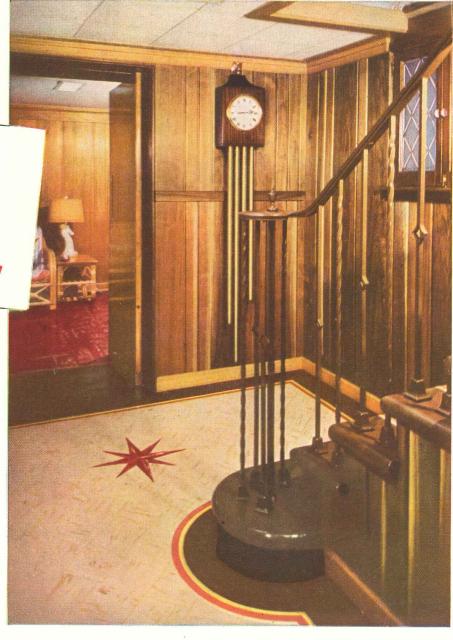

Design a

Graceful, Welcome

into clients' homes

Every home owner wants his floors to provide the rare combination of tasteful, unusual beauty and serviceable, down-to-earth durability.

Next time that problem comes up, specify Flexachrome*. You'll give your client everything he wants in a floor.

This modern, plastic-asbestos flooring material really provides what its name implies . . . flexible color. Its flexibility assures quick and permanent adhesion to all types of sub-floors. And you've never before seen such color in resilient flooring. 33 rich, vivid, true colors to

lighten, brighten and beautify any room in the house.

Tile-at-a-time installation gives you wide latitude in design...stripes, plaids, basket-weave, or any other pattern your clients want. Custom-cut inserts enable you to personalize Flexa-chrome floors.

Flexachrome's durability is exceptional, too. You can reassure your clients that, properly installed, his Flexachrome floors will last the life of his home. And, because it's greaseproof, Flexachrome is ideal for kitchens and dining areas . . . or any area where grease is a problem. Maintenance is easy, and those who prefer unwaxed floors will be delighted to discover that Flexachrome retains a soft, satiny beauty merely with dry buffing and an occasional steel wooling.

Let us send you complete details on Flexachrome and otherTile-Tex products. THE TILE-TEX DIVISION, The Flintkote Co., Dept. R, 1234 McKinley St., Chicago Heights, Ill.

OUR BUSINESS IS IMPROVING YOUR BUSINESS

HERE'S HOW WE DO IT...

Each York product is designed to cut costs, improve service, make a profit for those who install it. And in all your planning for clients, remember that any business can be made a better business with York air conditioning and refrigeration. York gives you really skilled help on every job, from the preliminary outline to the final installation. With York you get experienced aid all the way through, with full cooperation from a national organization that maintains branch offices and trained engineers throughout the country.

"See Your Architect, Engineer, Contractor, First" York believes in channeling contract work through You... and York gives you unequaled support in providing the owner with the finest central station system possible.

- a complete line of equipment
- competitive prices
- accurate, dependable product ratings
- technical assistance based on "case histories"
- cooperation with architects, engineers, and contractors
- practical help from York-Trained Engineers
- a national organization
- continuous product research and development
- certified maintenance

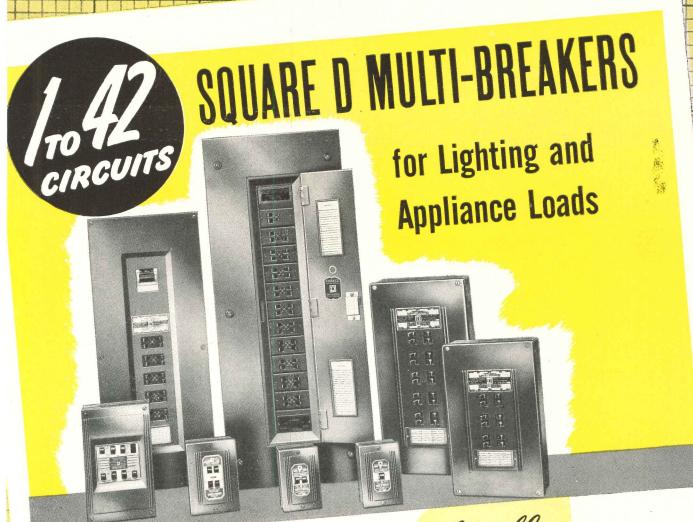

York engineers have at their command an inexhaustible supply of practical information gathered from thousands of successful York-equipped installations. This information and their services are at *your* disposal. If you are "planning" any work involving air conditioning or refrigeration, call your nearest York Office. You get impartial, experienced help from the start. Or write York Corporation, York, Pennsylvania.

PIONEERS IN INVENTION AND DEVELOPMENT SINCE 1874

Refrigeration and Air Conditioning

HEADQUARTERS FOR MECHANICAL COOLING SINCE 1885

THERMAL _ MAGNETIC. Thermal element deflects in proportion to temperature of wire insulation resulting from both surrounding air and losses within the conductor. Magnetic element responds instantly to heavy overloads or shorts. Both are needed for complete protection.

REPEAT PROTECTION. Nothing burns out . . . nothing to replace. No live parts are exposed. Anyone can quickly restore service.

NON-TAMPERABLE. Factory test-tripped and sealed. Eliminates well-intentioned but dangerous "doctoring" to accommodate higher loads.

SWITCHING. Circuits can be manually switched "ON" or "OFF" in addition to the automatic "TRIP" and manual "RESET" protective functions.

CONVENIENCE. Multi-breakers are attractive and occupy very little space. Mount them in any location. Provide for future expansion.

Write for Bulletin SA590. Square D Company, 6060 Rivard Street, Detroit 11, Michigan.

flexible

Basic multi-breaker mechanism lends itself to either single or multi-pole construction.

Types MO 1, MO 2 and MO 4 for branch circuits and small homes where high volume and low cost are controlling factors. Similar parts are assembled in 1, 2 and 4 pole blocks.

Type MO 8 for average homes. 4 pole basic block meets minimum requirements."Ad-On" single pole breakers increase total to 5, 6, 7 and 8 circuits as required.

Types MO 12 and MO 20 for larger homes. "Plug-In" 2 or 4 pole breakers cover the range of 4 to 20 circuits.

MO Panelettes and NMO Panelboards extend range to 42 circuits for stores, institutions, buildings and

Lighting at its best...FILTERED DAYLIGHT

There's no substitute for properly diffused daylight. With Blue Ridge Frosted Aklo* Glass in windows you provide daylight of pleasing quality that is easy on the eyes. Workers—in office or plant—enjoy an abundance of softly-diffused daylight without excessive solar heat.

REDUCES GLARE. Frosted Aklo Glass is a bluegreen diffusing filter between the sun or sky and the eyes of workers. Aklo's glare reduction makes seeing more comfortable—less tiring. Easier seeing means better workmanship—faster production—fewer accidents.

RETARDS SUN HEAT. Aklo Glass absorbs nearly all the infrared radiation of the sun and reradiates much of it externally. Interiors stay

cooler, providing more comfort and permitting lower air-conditioning costs.

Aklo Glass is manufactured by the Blue Ridge Glass Corporation of Kingsport, Tennessee, and sold through Libbey Owens Ford Glass distributors. To see for yourself how Frosted Aklo Glass reduces glare and sun heat, ask your distributor for a Radiometer demonstration.

Free Book on Reduction of Sun Glare and Heat.

Quality School Construction ...UNDER 60¢ PER CU. FT.

Exposed corridor roof shows Fenestra "D" Panels laid flat side down. Main roof area under panels at right was finished with suspended plaster ceiling. Roof was finished over a large area early in construction.

Exposed ceiling of structural Building Panels wall to wall. Factory prime-painted, Panels provide a smooth surface, economically finished by adding a coat of paint. Attractive, noncombustible. Note Fenestra Hollow Metal Doors, Fenestra Intermediate Windows.

Fenestra insulated "C" Panels used as a spandrel between windows of first and second floors. Four panels high. 14' long panels laid horizontally.

How Fenestra Steel Panels, Windows and Doors contributed to economical construction in the Robert N. Mandeville High School at Flint, Michigan.

Architects Bennett & Straight of Dearborn, Michigan, faced a familiar set of requirements:

- —Large size, with a layout involving considerable perimeter for good daylighting.
- —To be ready for fall occupancy.
- —Limited budget, calling for low cubic-foot cost.

Convinced of the speed of erecting with Fenestra* Building Panels, the architects checked costs . . . saw how on-the-site labor could be saved if the building was planned specifically to use standard units to minimize special work.

They decided on a 7' module. Classrooms were established in a 28' width, with partitions spaced at 14', 21', 28' and 35' intervals. The structural steel frame was designed in a bay size of 14' x 28', saving weight in steel. Saving in roof construction was achieved with standard Fenestra Type D Panels on the 14-foot span. Standard Type C Panels formed spandrels between floors and the window walls of Fenestra Intermediate Projected Windows.

For the roofs of the 100' x 100' gymnasium and the shop, Fenestra Acoustical Holorib Roof Deck was used. This provides a surface for application of roofing materials. The underside provides a soundabsorbing, perforated surface. It is noncombustible, and being steel, withstands impact. Holorib was used as the permanent reinforcing form for the seats in the spectator stands of the gymnasium.

Fenestra Panels—Fenestra Windows—Fenestra Doors—combined in this structure to help the architects and contractor achieve their triple goal of a sizable, sound structure, speedily erected, at low cost.

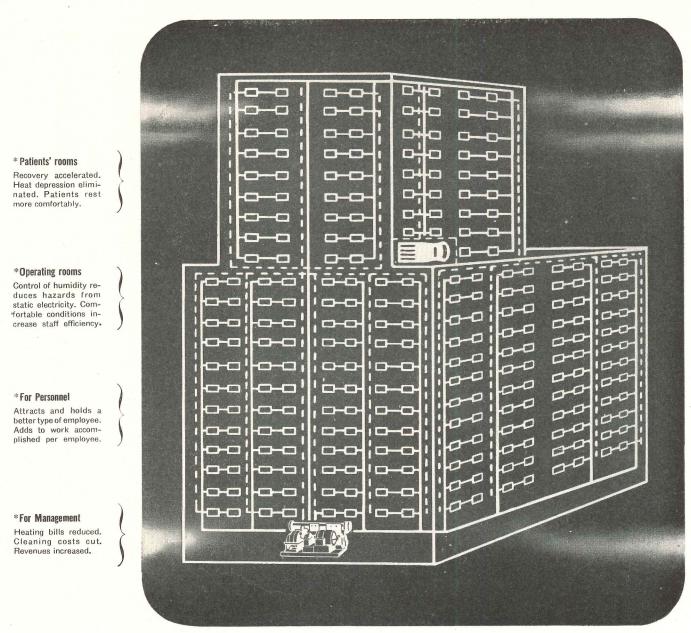

Your local Fenestra representative can help you capitalize on the time and money savings of these standard building components. Call him or mail the coupon below for full information.

*The "x-ray" shows how the Carrier Conduit Weathermaster System reaches out to hundreds of individually controlled units from a central source.

"X-RAY" OF A MODERN HOSPITAL

This "x-ray" shows the healthy state of affairs in a hospital air conditioned by the Carrier Conduit Weathermaster System. Invented by and exclusive with Carrier, this system is ideal for hospitals. A twist of a dial in each room provides individual control of temperature all year round.

The Carrier Conduit Weathermaster System provides other important advantages. It can be installed without interrupting hospital functions. Small-diameter conduits take the place of space consuming ducts—require only about 15% of the space. For information about the Conduit System—and a wide variety of other Carrier air conditioning and refrigeration equipment for hospitals—call your Carrier representative. Or write Carrier Corporation, Syracuse, N. Y.

• Among our products serving many famous hospitals are Carrier Reach-in Refrigerators for blood banks; refrigeration for kitchens; air conditioners for operating rooms, cafeterias and public spaces; and Weathermaster Systems for the comfort of the entire institution.

AIR CONDITIONING REFRIGERATION INDUSTRIAL HEATING

This Hospital is Endowed with

PATCHING and repainting ordinary hospital walls is a never-ending expense. But hospitals having Hauserman *Movable* Steel Interiors virtually eliminate this constant maintenance cost.

That's because Hauserman *Movable* Steel Interiors have a baked-on finish that won't chip, crack, warp or scale. This eliminates frequent patching and repainting. It means that a janitor can easily perform all the normal maintenance required ... occasional soap and water washing.

Hauserman *Movable* Steel Interiors also assure efficient operation for the life of the building. Hauserman Steel Partitions can be easily moved

whenever alterations or additions will make new floor layouts desirable.

A Hauserman representative will be glad to discuss these and all the other advantages of Hauserman *Movable* Steel Interiors with you, your architect and your contractor. Just call the Hauserman office or representative nearby or contact *The E. F. Hauserman*

YOU CAN BE SURE .. IF IT'S

Westinghouse

STOP!

... have you <u>planned</u> the power distribution system?

Designing a new production area? Everything laid out to do the job you've planned? Sure it is.

BUT... have you planned for the best system to power the new production lines? Their ability to produce depends directly on this power system.

Will the distribution system save your client money over a period of years? Have you thought about future loads? Is it flexible enough to handle shifting production lines?

Willit provide the voltage regulation needed?

Whatever the problem—Westinghouse can help you find the "one best" system for the plant you're designing.

Our engineers have worked with *all types* of industries for a good many years. They've found new and better answers to *all* phases of power distribution. Westinghouse offers this co-operation to all architects in getting power to do the best job at the lowest possible cost.

SYSTEM PLANNING SERVICE

in case of a HOSPITAL FIRE?

In case of fire, his chances might not be too good in many hospitals today.

Each day there are three fires of record in hospitals and institutions, and in those where fatalities occur an average of five lives are lost per fire! Isn't this proof positive that many trusted precautions are not adequate protection at all?

Unfortunately, too many people responsible for protection rely completely upon the elimination of ordinary fire hazards, important as this is. All too many more depend upon "fireproof" construction. Two facts show this to be false confidence: "Carelessness with matches and in smoking" continues to be the greatest cause of fires . . . and so-called "fireproof" buildings continue to become furnaces for flammable contents.

What most people ignore is that, regardless of the cause of fire, regardless of the building construction, it is the proper control of fire from the first spark that constitutes full and adequate protection against fire. Needless loss of life and property can be prevented by checking fire at its source, whenever and wherever it

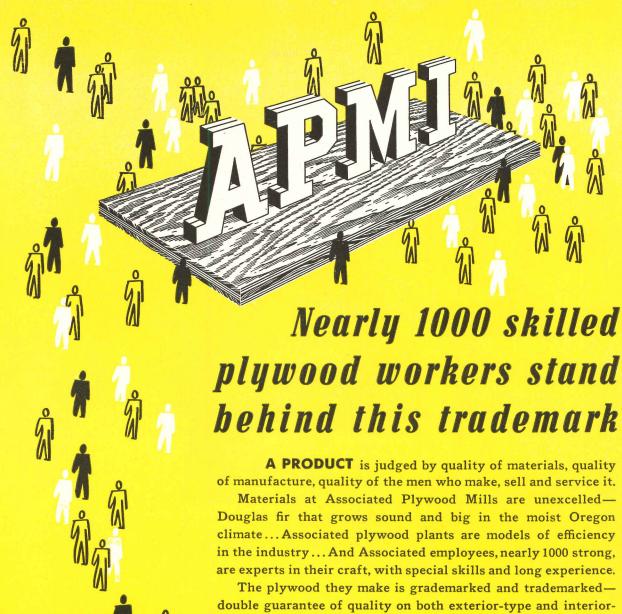

starts, night or day, automatically, with a Grinnell Automatic Sprinkler System. Seventy years experience shows that practically 100% of fires starting in buildings protected by Grinnell Automatic Sprinkler Systems are extinguished before doing material damage. Fire experts will tell you that your best protection against fire in any building is automatic sprinklers.

SEE THAT GRINNELL SPRINKLER HEADS ARE ON GUARD

In hospitals, as well as in schools, hotels, theaters and factories, there is a moral obligation upon management for the utmost in protection of life and property. For your own sake be sure the hospitals, the hotels, the plants, and the schools for which you are responsible are protected with the famous Grinnell Automatic Sprinkler heads—your assurance of positive, automatic protection against fire. Grinnell Company, Inc., Providence, Rhode Island.

marble

the Doctor's first assistant!

In every part of the Hospital, Cleanliness must be above suspicion—a Cleanliness in operating rooms, laboratories, wards, corridors, toilets, kitchens and reception lobbies, that extends beyond mere appearance and approaches the standards of sterilization established for bandages and surgical instruments.

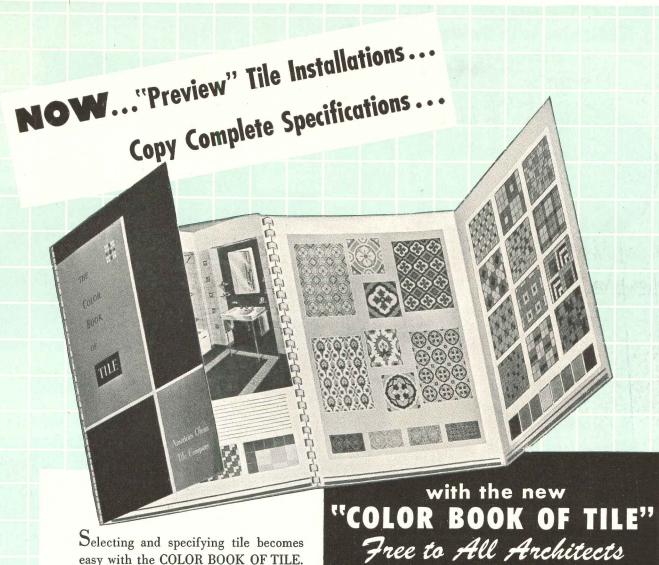

Marble meets fully all such demands. It is the easiest and cheapest of building materials to maintain or keep clean.

Write for latest literature on foreign and domestic marbles.

Marble Institute of America, inc.

108 FORSTER AVENUE, MOUNT VERNON, N. Y.

Selecting and specifying tile becomes easy with the COLOR BOOK OF TILE. No guesswork! You can show your clients typical installations in actual colors, with alternate floors and walls to choose from. No lost time! You can copy verbatim the complete, 42-word specifications given for each installation.

There's no other book like the COLOR BOOK OF TILE—none so complete and easy to use. Simply open the front and back sections *side-by-side*, and you have before you selected full-color illustrations of kitchens, baths, powder rooms and game rooms, with a variety of alternate

colors and patterns of all types of tile to consider for any installation. Other pages display a wide selection of American-Olean wall and floor tile, hand decorated tiles and bathroom accessories, with complete specificational details.

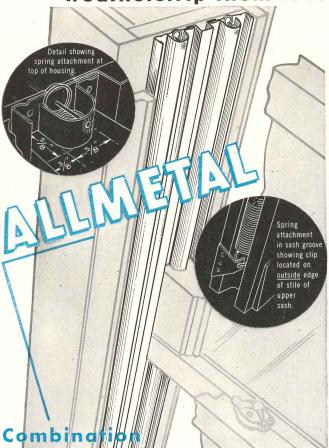

Copies of the COLOR BOOK OF TILE have been sent to most architects. Write us on your business letterhead if you have not received your copy, or if you need an extra one for a member of your staff.

4-WAY AIR DISTRIBUTION delivers conditioned air in any direction

— or all four directions

CH CH

-one big reason why YOU CAN'T MATCH

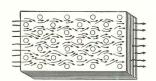

FRIGIDAIRE AIR CONDITIONERS!

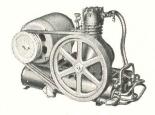

Yes, four-way selective air flow is a big reason for specifying Frigidaire Air Conditioners. Four grilles front and back and one on each side of the removable hood can be individually set to deliver conditioned air in any direction. Result—greater flexibility in locating units and simplified installation.

Ask your dependable Frigidaire Dealer to tell you about *all* the advantages of Frigidaire Air Conditioners. He'll also be glad to tell you about Frigidaire Room Conditioners and Central Systems. Look for his name in your Classified Phone Book, under "Air Conditioning" or "Refrigeration Equipment."

Styling by Raymond Loewy gives Frigidaire Self-Contained Air Conditioners their smartly modern appearance. They're finished in two-tone gray to harmonize with any surroundings.

Multipath Cooling swirls air through a maze of cold, reduces room temperature and humidity extra-fast, extra-evenly. High efficiency cooling unit.

Frigidaire Compressor is especially designed for these Self-Contained units — precision-matched with cooling unit and controls for low-cost, trouble-free service.

Thick Insulation—helps keep Frigidaire Air Conditioners whisper-quiet, prevents moisture from forming on cabinets.

FRIGIDAIRE AIR CONDITIONING

Over 400 Frigidaire commercial refrigeration and air conditioning products — most complete line in the industry.

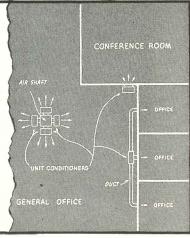

FOR INDIVIDUAL ROOMS in homes, offices, hotels and hospitals, Frigidaire Window Conditioners supply the same kind of air conditioning as big, theater-size systems. They're easily installed, powered by the famous Meter-Miser. Frigidaire also offers large capacity central systems.

Visit the Frigidaire Exhibit — Booths 6, 7, 8 — National Home Builders Show, Stevens Hotel, Chicago, Feb. 19 to 23

HERE'S A FAST, LOW-COST WAY TO AIR CONDITION EXISTING BUILDINGS!

For air conditioning existing or new buildings, a Frigidaire Multiple-Unit Installation is fast and simple. Since it employs the compact, self-contained unit shown above, installation costs are low—for little duct work and no major building alterations are required. Operating costs are equally low. Individual Frigidaire units can be turned off or on as needed—can be serviced without affecting other space.

Want the facts about a REALLY STABLE SOLID-CORE DOOR?

MENGEL Solid-Core Flush Doors Expand INTERNALLY— But NOT EXTERNALLY!

M engel Solid-Core Flush Doors represent a radically new Standard of Stability. Their unique construction does not undertake the impossible job of preventing expansion and contraction caused by changes in humidity — it controls these forces to an extent hitherto unknown.

All Mengel solid hardwood core members are deeply slotted at frequent intervals both with and across the grain. These slots effectively absorb expansion and contraction. Thus the solid wood between the slots can expand and contract as the weather changes, without in any way affecting the stability of the door itself! Futhermore, Mengel's exclusive key-lock dovetails and waterproof hot-press phenolic bonding keep the entire assembly permanently tight....

Get all the facts about Mengel Solid-Core Flush Doors—the really stable doors that co-operate with nature on the inside, ignore it on the outside! The coupon will bring you full information and specifications.

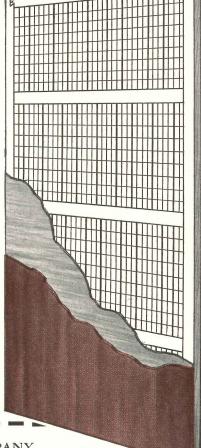

HIGH HUMIDITY

Wood expands under humidity, but expansion is absorbed by deep slots cut both with and across the grain. Note how the expansion of the solid wood has closed the slots.

HUMIDITY

Dry atmosphere has shrunk the solid wood between the slots, thereby increasing the width of the slots, without changing the dimensions of the door itself.

THE MENGEL COMPANY

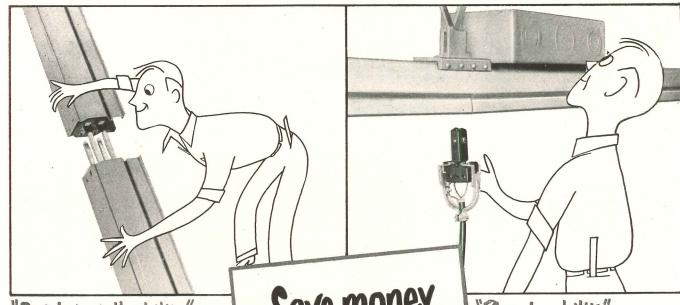

Plywood Division, Dept. AR-6, Louisville 1, Ky.

"Can I be sure the Structural Facing Tile I choose is a quality product?"

"Can I be sure it comes in dimensions most suitable for easy, economical use?"

There are other questions you could ask, but these two simple ones spring naturally to your mind when you're choosing Structural Clay Facing Tile—the "wall and finish in one."

They're more easily and satisfactorily answered, when you ask them of any one of the companies named above.

These companies are all members of the Facing Tile Institute. And the aim of the Institute, and of the members who maintain it, is to furnish you with fine quality, easy-

to-use Structural Facing Tile, glazed and unglazed.

The Institute, in fact, was formed for this purpose. Through the years, members have devoted continuous research toward improving quality, simplifying and standardizing shapes and sizes, and obtaining a full range of colors and finishes.

Each member of the Institute guarantees that any product "manufactured by him will conform to the quality standards, tolerances and grading rules established and maintained by the Institute.

For more information about the "10 good names to know" and technical data about Facing Tile, write to the Institute, Desk AR-2, for new catalog 50-C.

1818 HOPE'S 1950 SCHOOL WINDOWS

Crow Island School, Winnetka, Ill. Eliel Saarinen . . . Eero Saarinen: Perkins, Wheeler & Will, Architects

• In the plan of this most interesting school a series of class rooms projects from a corridor. The practically complete window-wall on two sides of each room provides full daylight with control of sunlight and ventilation at all times. According to this plan, each class room has a full view of its own private grass and pavement court. The illustration is of the kindergarten wing at the end of the building.

This treatment is enhanced by the harmony between the class-room window-wall and the window at the back of the court. The versatility of Hope's Steel Windows was important to the success of this layout and their substantial construction will prove a lasting satisfaction for the life of the building.

steel windows...known for their

STREAGE STATE

HERE'S THE REASON WHY!

Mesker Intermediate Windows, like those used in the project illustrated here, are $1\frac{3}{4}$ " in depth . . . the deepest section of any window made. Thus they possess strength necessary to resist wind pressure and shock when used in large openings.

Note the narrow $\frac{3}{4}$ " Mesker putty ledge. It facilitates glazing, looks much neater and gets away from thick wrinkled putty. The glass in Mesker Intermediate Windows lies in the same plane—a refinement that assures finest appearance after glazing!

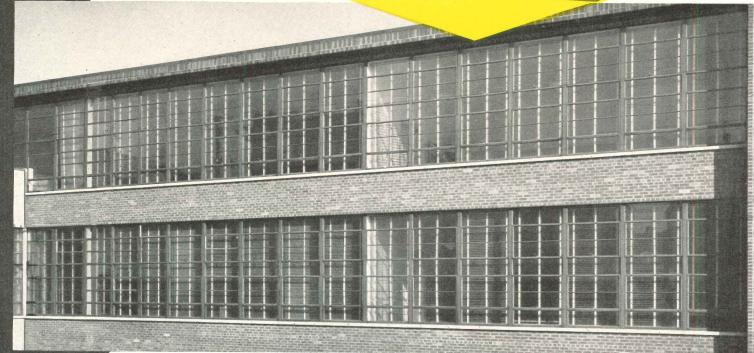

SAINT JOSEPH SCHOOL CHICAGO, ILLINOIS

> Architect: Edo J. Belli Chicago, III.

Contractor: Herlihy Mid-Continent Co. Chicago, III.

Mesker Sales Engineers: Branch-Nicoloff Co. Chicago, III.

Modern design, plus sound structure, with Mesker "window walls of glass"!

Here's an example of the design possibilities of the strongest windows made . . . Mesker Steel Windows! The two "window walls" above are 9'5" high and almost 70' long . . . each having more than 600 square feet of daylight area. Without sacrificing structural strength in the windows, the architect has been able to achieve an excellent functional design. What's more, this is a west elevation in Chicago, where high winds are commonplace.

STEEL means strength and there's more steel in

Mesker windows! Their 1¾" sections are the deepest sections made. Mesker Steel Windows are especially useful in large openings, providing maximum light and ventilation coupled with exceptional structural strength. You get higher resistance to wind and shock, greater safety, lower maintenance. Important too, Mesker's extra strength means less possible damage in transit, during installation, through the years. Specify heavier, stronger Mesker STEEL Windows . . . known for their strength.

Available now and FREE to architects

Just off the press—new 1950 Catalog of Mesker "Heavy Duty" Windows! An organized reference book that covers every aspect of steel window designing, engineering and specifying. Order your copy today by mailing the coupon at right!

American Blower-a time-honored name in air handling

In Cleveland, as in other cities, American Blower Air Handling Products service commerce, industry and public utilities. For air handling data in the Cleveland area, call American Blower—Main 6846. In other cities, consult your phone book.

All air handling equipment is not alike. There's a big difference in quality, design, quietness, operating costs and efficiency. American Blower products have stood the test of time—won the approval of architects, engineers and owners.

Air is free ... use it profitably!

A RCHITECTS know the importance of air in process work and as a sure means of improving both working and selling conditions.

They know, too, that the finest air handling equipment money can buy is, in the long run, the best investment.

Building better air handling equipment for America's commerce, industry and public utilities has been American Blower's business since 1881.

Out of the thousands of applications of American Blower drying, ventilating, dust collecting, air conditioning and air handling equipment have come vital technical data and firsthand experience that may prove invaluable on many of your jobs.

If you would like to know how you can profitably apply American Blower equipment to any business

or building, phone the nearest American Blower Branch Office. And remember, if you need data covering any phase of air handling, write for free factual American Blower technical bulletins.

AIR CONDITIONING THE MODERN HOSPITAL

By E. J. Benesch, Chief Air Conditioning Engineer, Syska & Hennessy, Inc. Consulting Engineers, New York, N. Y.

edward J. Benesch received his M.E. degree in 1926 from the Brooklyn Polytechnic Institute. He has since been continuously engaged in the fields of air conditioning, heating and ventilating. He has been associated with Syska & Hennessy, Inc., consultingengineers, since 1928 and now directs their

air conditioning, heating and ventilating work. Important projects on which he has worked include New York University, Bellevue Medical Center and the United Nations Permanent Headquarters in New York City. He is a member of the New York Association of Consulting Engineers, New York Society of Professional Engineers, and the Engineers Club.

Modern hospital practice demands that year-round automatically controlled air conditioning be provided for such sections as anesthesia rooms, the operating unit, delivery rooms, diagnostic x-ray unit and the allergy unit. This is dictated not only as an important aid in the treatment of disease and the promotion of the patients' welfare (since controlled temperature is often closely associated with rapid recovery), but for greater efficiency of the hospital's staff and personnel.

Although completely air conditioned hospitals may not have been common in the past, partly because of installation costs and operating expenses, today there is a steadily increasing recognition of the importance of comfortable environment for patients, doctors, interns, nurses, technicians, laboratory workers and others.

At present, engineering studies are being made which will undoubtedly result in bringing extensive air conditioning well within the construction and operating budgets of the average hospital.

OPERATING ROOMS

Operating units are practically always air conditioned. These, and anesthesia rooms, are first in importance. They must satisfy the following three conditions:

- **1. Provide comfort** for the surgeons and medical staff.
- 2. Provide an atmosphere that is not conducive to electrostatic spark discharges so as to reduce the possibilities of anesthetic explosions.

3. Make available a supply of clean, filtered air that is free from dust, dirt and bacteria.

The location of the operating unit has a definite relation to the design of the refrigeration plant that is part of the air conditioning system. An operating unit so located that the heat loss will be at a minimum, will probably require air cooling during the winter months. Even though 100% outside air is circulated, it may be necessary to supply heated air to permit the necessary humidification, and then to cool this air so that it can absorb the internal heat gain of the room. Because of this possible winter operation, it is essential that the cooling equipment for the refrigeration condenser water be so installed that the compressor can operate during the winter.

It is important that a high relative humidity be maintained in the operating room to eliminate the possibility of electrostatic spark discharges. In fact, the National Fire Protection Association states:

"The temperatures and humidity maintained in operating rooms should be chosen on the basis of well-being of patient and personnel. High humidity will reduce the hazard of electrostatic spark discharge under certain conditions, but it is not sufficiently reliable for their complete elimination."

Since the relative humidity favorable to the comfort of both personnel and patient is from 55 to 60%, there will be an automatic reduction of this fire and explosion hazard.

However, because of the high relative humidity that is maintained in operating rooms, double glass windows are often necessary to prevent condensation and frosting on the glass during the winter, and also as a means of reducing drafts.

OTHER APPLICATIONS

Beside the operating unit, it is important that air conditioning be planned for the recovery room to which the patient is removed following the operation. During summer, cool air not only stimulates recuperation but it also increases comfort.

Delivery and labor rooms should receive the same treatment as operating rooms.

While year-round air conditioning is not important in the nursery for full-term infants, there must be careful automatic control of the relative humidity and temperature.

Because of changing medical technique, it is important that the medical staff be consulted.

DESIGN CONDITIONS

Although it has been a practice to use 80°F. as in-

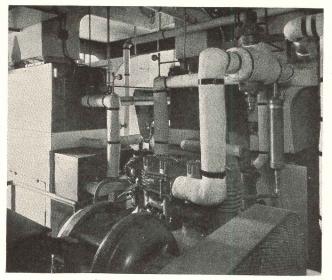

Photo courtesy of Carrier Corporation

side design conditions for summer, the operating staff of a large general hospital constructed in 1949 found that a maintained temperature of 68°F. provided the most satisfactory working conditions. It indicates that it is essential to have a plant capacity sufficient to produce air conditions at least 15°F. lower than current practice requires.

For overall hospital comfort in the tropics, one study indicates that the maximum inside temperature be 85°F. D.B. or 77.5° E.T. (effective temperature); the summer range of the inside temperature should be 75-83°F. D.B. or 70-77° E.T.; maximum relative humidity, 60%; the relative humidity may cycle between 25 and 50% if the dry bulb temperature is right; the dry bulb temperature may cycle through about 6°F. without being noticeable; for winter comfort, an acceptable condition is 70°F. D.B. and between 25 to 50% relative humidity.

TEMPORARY PROVISIONS

Some comfort cooling for patients has been provided in a few hospitals by supplying electric power outlets conveniently located for the installation of portable air-cooled, window-type conditioning units. While at best these are but a temporary expedient, they do provide some air conditioning, even if only for the private patient.

VENTILATION

Recirculation of air in an operating room air conditioning system is not permitted. The reason is obvious. Air recirculated would increase the concentration of possible explosive mixtures of anesthetics, raise the odor concentration, and build up the dust content of the supply air.

Use of an electronic or electrostatic air filter will reduce to a minimum the passage of dust particles on which bacteria ride. However, mechanical filters should be employed ahead of the electrostatic filter to guard, in the event of power failures, against unfiltered air entering the conditioned area.

The number of air changes has a definite bearing on the control of infections. It is essential to have a rapid air change, devoid of drafts, to reduce bacterial concentration and therefore the rate of infection. A minimum of 12 air changes per hour is recommended. The internal heat loads in an operating room are such that this number of air changes per hour are attainable without unreasonable temperature differentials between supply and room air.

Supply air outlets should be located not less than 6 feet from the floor, not only to prevent the cooled air from being blown directly on the room occupants, but also to prevent the circulation of anesthetics

through the entire room. Exhaust outlets should be provided both at the ceiling and near the floor.

For communicable disease wards, 100% fresh air is recommended for basically the source of infection is the patient. Rapid removal of the infected air, therefore, will reduce or help prevent the spread of infection.

FLOOR OR CEILING PANELS

Heating coils in the ceiling or floor, or in both floor and ceiling for some designs, have inherent advantages. Utilization of the heating panels for cooling surface will reduce the quantity of cooled air that must be introduced into the conditioned area by conventional means. Since the coils are already installed as part of the heating system, economical year-round operation may result when this coil surface is used as part of a residual cooling system.

With increased use of floor or ceiling coils for hospital heating, designers will do well to consider the advisability of using these coils as part of the means for supplying air conditioning during the summer.

Although at first, as has been stated, air conditioning was introduced in hospitals for maintaining comfortable conditions for the operating staff, it was later learned that controlled air conditions during operations resulted in better recovery by the patient. Now air conditioning is considered a necessary, and often an indispensable, adjunct in the proper therapy and treatment of a large number of diseases.

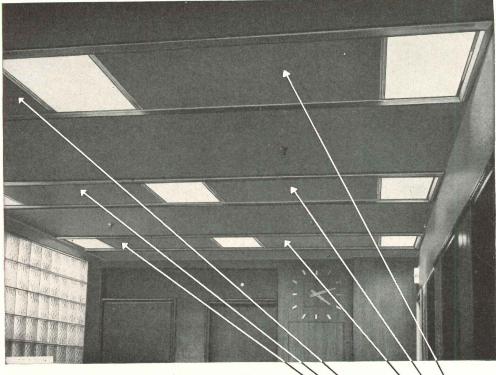

In recommending systems for the modern hospital, architects, consulting engineers, dealers and manufacturers unhesitatingly approve equipment designed to operate with "Freon" refrigerants. Refrigerating Engineering Application Data, Section No. 38, published by the A.S.R.E., recommends the use of "Freon" refrigerants for hospital air conditioning. "Freon" refrigerants are safe...nontoxic, nonflammable, noncorrosive and practically odorless. In addition, the purity and uniformity of "Freon" refrigerants aid in prolonging the efficient, economical performance of the installation. This is why it is to your client's advantage, to be certain that specified equipment is designed to utilize "Freon" safe refrigerants.

Kinetic Chemicals, Inc., Tenth and Market Streets, Wilmington 98, Delaware.

"Freon" is Kinetic's registered trade mark for its fluorinated hydrocarbon refrigerants.

For complaint-free low velocity air distribution

Use the Best...

THE CARRIER CORPORATION OFFICES, New York City. Multi-Vent panels, barely discernible in beautiful, plaque-type coffered ceiling. Remarkably fine temperature regulation achieved by varying air volume in each zone with thermostat controlled modulating dampers.

MULTI-VENT

Ceiling Panels

Though the cost of supply and return air outlets is a very small percentage of the overall cost of a good air conditioning system, economizing in the selection of air distribution media is often the cause of complaints from clients on drafts, uneven temperatures, insufficient air, noise and dirty ceilings.

Multi-Vent is better able than any other diffuser to provide widespread uniform air distribution, without these common objectionable conditions because the basic draft, noise and dirt hazards, inherent in all other diffusers, are non-existent in the unique Multi-Vent principle of distributing air entirely by displacement rather than by high velocity injection.

In distribution by displacement there are no strong air streams to aim and no change in air flow pattern when air supply is varied. Regardless of room size, ceiling heights and relative positions of partitions, beams, etc., all problems of outlet location and air direction adjustments for throw and drop to avoid drafts are eliminated.

Multi-Vent, moreover, can handle greater amounts of air in proportion to room size than any other diffuser and still maintain a rate of air motion low enough to meet not only the most exacting comfort zone requirements but also to solve the high load and high ventilating problems in critical laboratory and industrial processing areas.

Multi-Vent has many other advantages such as savings in basic heating, cooling and air handling equipment in addition to the important installation, maintenance and decorating economies.

Write for detailed literature and the name of our sales engineer in your vicinity.

YOUR ENTIRE AIR CONDITIONING SYSTEM WILL BE JUDGED BY THE PERFORMANCE OF THE OUTLETS

IMPORTANT CONSIDERATIONS

for the Architect
about to recommend
A SCHOOL TIME AND
PROGRAM SYSTEM

FIRST, let's define the function:

A School Time and Program System has two primary functions: (1) to give the correct time in each classroom, and (2) to sound signals at pre-determined intervals. It must work automatically 5 days a week (often longer), in buildings jam-packed with kids and staffed by teachers and a principal who have neither the time nor the inclination to fuss with complicated gadgets.

SECOND, let's examine the features:

The installation consists of a Master Clock — Program Controller with Secondary Clocks and Buzzers in classrooms (bells elsewhere). In order to function smoothly the system should have these advantages:

- Master Clock-Program Controller must be "on time" together at all times. In the STANDARD System they are one and the same mechanism, geared together. They can never get "out of step."
- Master Clock and Secondary Clocks must also reveal exactly the same time.

In the STANDARD System there is only one synchronous motor—a heavy-duty, slow speed, precision-built unit located in the Master Clock. Secondary Clocks have no motors, electrical contacts, tubes or other complicated parts—require no cleaning, oiling, adjustment or renewal.

Other synchronous systems have one or two motors in each secondary clock and 1, 2 or 3 motors in the control unit where the failure of one disarranges the entire system.

The Master Clock-Program Controller should keep running during current interruptions, so that when current is resumed the signals will sound on time.

In STANDARD Systems this is accomplished without a catching-up-to-time period — and without the use of batteries which require frequent attention or renewal.

4. Each Secondary Clock should reset itself automatically after current failure.

In STANDARD Systems each clock has a 25-minute corrective range (slow or fast) and the reset feature functions in two seconds, silently. In certain other systems the Secondary Clocks must be reset in groups.

The Program Controller should cover all the programming needs of the entire school. This means complete service with periods down to the minute, and silence during nights, weekends, etc.

Furthermore, it must be so simple that anyone can set up a program in a few minutes, and change schedules at a moment's notice.

STANDARD employs a special paper tape, marked in minutes and hours, and punched by the Principal according to the schedule desired. Spare tapes, with different schedules, can be installed in a few seconds when necessary. The tapes will last 15 years or longer, and are free.

Other systems employing lugs, pins, cams, etc., are not only difficult to set up, but are subject to failure when pins drop out or break off.

- For best performance and long-range economy, engineers agree that the wiring system for a clock and program service should be kept separate from light and power lines.
- 7 The system should be backed by years of dependable operation in schools under all conditions.

STANDARD can produce ample evidence of dependable performance in case histories running back to the turn of the century.

We shall be pleased to send you our new Bulletin No. 178, and to provide you with names of satisfied users to whom you may refer. Perhaps we can also assist you in preparing specifications for your time and program system. Please get in touch with us.

means low maintenance, high morale"

-E. F. Sperling, Director of Engineering, Helms Bakeries

When Helms Bakeries executives put their okay on the plans for this new plant, they knew from long experience, how well the vast areas of glistening-clean Northern Hard Maple Floors would serve them. They knew that neither nature nor man has yet produced another floor material so nearly perfect. Merchants, manufacturers, school authorities, home owners, by tens of thousands, know this, too. They esteem Northern Hard Maple for its lifetime endurance, its ever-modern beauty, its cheerful brightness, its permanent ease of cleaning and maintenance and the resilience that makes it so pleasant to stand on, walk on, work on, play on. MFMA is Northern Hard Maple Flooring at its splendid best-backed by rigid association grading supervision. It's plentiful again. Specify it where your judgment dictates, in fullest confidence of quality, economy and delivery-per-schedule. For catalog data, see Sweet's Arch. 13/g/6— Eng., 4/5/22. Write for latest listing of all the many MFMA-approved floor finishing products and processes.

Your most adaptable fluorescent lighting medium ...

Corning "ALBA-LITE"

ALBA-LITE "55" ALBA-LITE "66" ALBA-LITE "77"

ALBA-LITE "88"

This photograph gives you an idea of how well CORNING ALBA-LITE diffuses fluorescent light . . . especially desirable for office work. The qualities of diffusion and brightness control are contained within a thin opal glass panel. This makes ALBA-LITE adaptable to almost any type of installation whether recessed or exposed.

There is no limit to the design flexibility that can be achieved with ALBA-LITE. It is obtainable flat or bent in four standard patterns as shown.

Widths vary from 2" to 24", lengths from 8" to 100". It may be used in fixtures, or glass ceilings, as required.

Bulletin LS-17 describes this versatile lighting glassware in detail and illustrates many ways it is being used. This new 30 page bulletin is yours for the asking. Use coupon below.

It happened at night

In a hospital almost anything can happen at night... at any time. For births, accidents, emergency operations may demand attention at any hour. Thus dependable lighting in hospitals is extremely vital. And this means more than number, brilliance and location of lights. Provision should be made to offset the danger of failure of normal current supply.

Lighting failures are of frequent occurrence. For storms, fires, floods, collisions or other accidents beyond the control of ever-vigilant utility companies give little or no warning and are a serious menace to electric power lines.

You can safeguard the buildings you design against such power failure. Exide Emergency Lighting provides safe, sure, modern protection to hospitals, schools, theaters, stores and other buildings. *Instantly* and automatically it takes over the light-

ing load when other sources fail. It can be supplied in units or systems to meet any requirement.

You'll find this new 48-page Mills Catalog bound into Sweet's File, Architectural, for 1950—or we'll be glad to send you an easy-to-handle copy for your individual use. Just ask for Catalog No. 50.

ILLS MOVABLE METAL WALLS are distinguished by the simple refinement of their architectural design, the permanent solidity of their construction, the pleasing soft colors of their baked-on enamel finishes that keep their fresh new look with no other maintenance than ordinary washing.

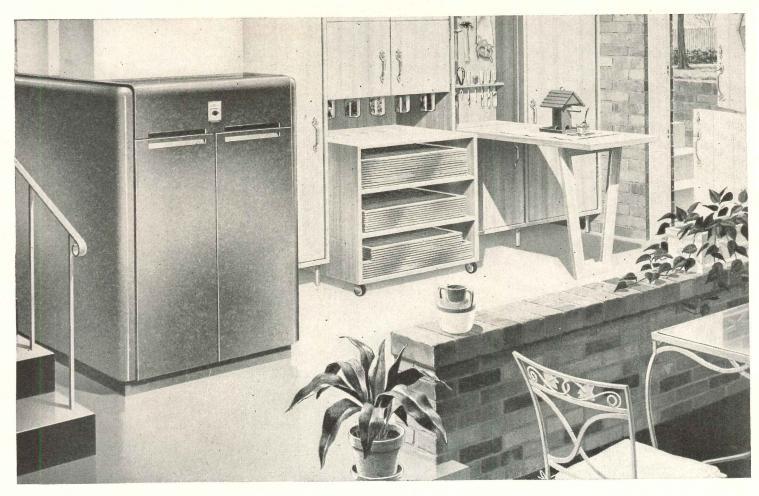

Insulated and soundproofed, with surfaces specially treated to eliminate all harsh light reflection, they create beautifully efficient business interiors.

Yet when progress requires changes in office layout, Mills Walls can be moved—quickly, easily, at very low cost—and completely re-used to fit any new space arrangement. An entire change can generally be accomplished overnight without interruption of business routine.

A NEW NAME ... A NEW PRODUCT

With major advantages in a wide variety of applications!

WHAT IS MIRAWAL?

Mirawal is a surface finishing material with a genuine porcelain-on-steel facing, designed for both interior and exterior use. The desirable qualities of glass are combined with the structural strength of steel to produce facings that are easy and economical to keep clean . . . facings that are durable, highly scratch resistant, with a colorful, fireproof, lifetime finish.

The vitreous porcelain surface of Mirawal is fused to specially prepared steel at temperatures up to 1600° F. The porcelain-on-steel sheet is then laminated to ½" Masonite Hardboard backing—producing a sturdy material with an inseparable facing.

Exterior Mirawal is manufactured to the same careful specifications as the interior facing material. It is

then reinforced and waterproofed with rigid sheets of 28-gauge galvannealed steel inseparably laminated to the back of the Masonite core.

CHARACTERISTICS OF MIRAWAL:

Mirawal will not fade, depreciate, peel or discolor. The surface is impervious to moisture, odors, ordinary household acids, oils, grease and solvents. There are no cleaning problems whatsoever connected with Mirawal. Stains or chemicals that might splash onto the surface are easily removed with a damp cloth, with no defacing stains remaining on the surface.

Wherever permanent, eye-catching beauty is desired, with low-cost maintenance, Mirawal offers many advantages at a reasonable cost. If you would like a sample of Interior and/or Exterior Mirawal with folder giving complete specifications, write us. We will be glad to send them to you.

Mirawal is Ideal for Exterior and Interior Application of Super Markets • Restaurants
Theaters • Dairies • Meat Markets • Candy Shops • Bakeries • Hospitals • Food
Processing Plants • Schools • Railway and Bus Stations.

BALTIMORE PORCELAIN STEEL CORPORATION

BALTIMORE 3, MD.

FIREPROOF GOLD BOND ROCK WOOL NOW AVAILABLE IN 8 FT. SEALED BLANKETS!

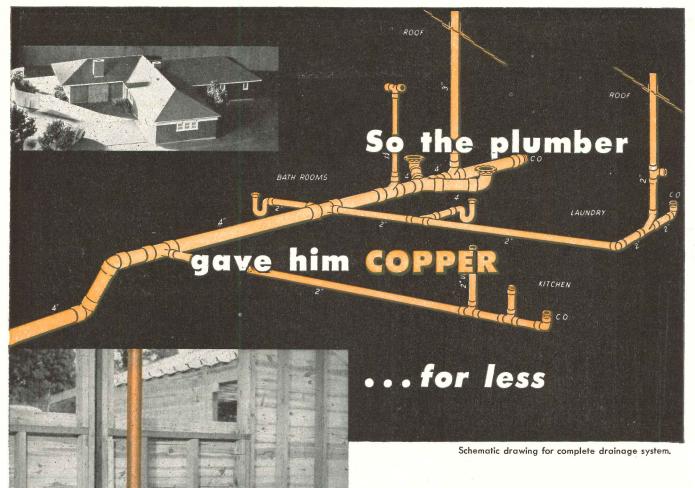

THESE days with the cost of fuel sky-high, you do your clients a bigger favor than ever when you specify top-quality insulation. You can now give them the best there is—fireproof, Full-thick Gold Bond Rock Wool—in new, easy-to-apply 8 ft. Sealed Blankets. The additional cost over thin, inadequate insulation will be more than paid back in year-round extra comfort and annual fuel savings. These savings often amount to a full 40% and continue for the life of the house!

Gold Bond manufactures a complete line of Rock Wool Insulation products to meet all your insulation requirements. Every one is completely fireproof—as fireproof as the rock from which it's made. Not just "fire-resistant" or "fire-retarding." For National Gypsum's new folder describing the full line of Insulation products, including data on thermal properties and specimen specifications, write Div. Y, Dept. AR-2.

Housing Project in New York Built With Open-Web Joists—This is the Abraham Lincoln Housing Project, a new low-rent, 1286-apartment development in Harlem. Built for the New York City Housing Authority, it consists of six 6-story and eight 14-story buildings. In the 6-story structures Bethlehem Open-Web Joists are used in combination with concrete floors and plaster ceilings. Steel joists were chosen because they reduced the weight of the buildings and thus effected a definite saving in the pile foundations. In addition, floors constructed with Bethlehem Open-Web Joists offer many other important advantages. They are non-combustible and shrink-proof. They retard the passage of sound, and are immune to attack by rodents. They permit maximum area between firewalls, and make exterior fire escapes unnecessary. They also allow the

architect complete freedom in locating exits and vented interior baths. See our catalog in Sweet's for complete information about Bethlehem Open-Web Joists. Architects: Skidmore, Owings and Merrill, New York; Vertner W. Tandy, New York; Edwin M. Forbes, New York. Structural Engineer: William A. Hoffberg, New York. Contractor: H.R.H. Sam Minskoff & Sons; Tile Contractor,
A. Tozzini Tile Works, Inc.—all of New
York, N. Y.

Fifth Avenue, New York, long has been one of America's finest residential areas.

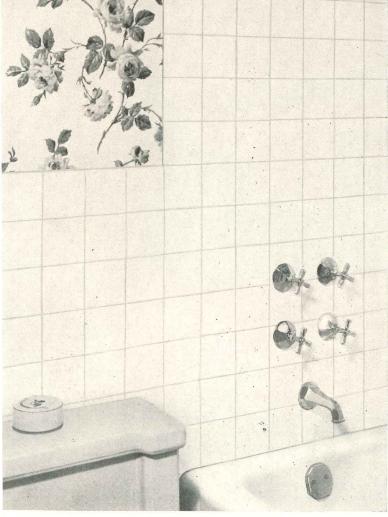

Typical of these residences is this new, modern apartment-hotel where only top quality materials have gone into both exterior and interior construction. In bathrooms and showers—the choice is *real clay* Suntile.

Suntile is an ideal selection for any building interior where there can be absolutely no compromise with quality. Suntile is manufactured under strict supervision to the highest standards in the clay tile industry.

When you select Suntile, you can be sure your tile will represent the best in form and finish—give greatest resistance to marring, chipping and cracking—reduce maintenance, repair and decorating costs to the very minimum.

Suntile will keep its good looks for the life of your building. It's Color-Balanced in beautiful, fadeless colors that give you wide selection of harmonious blends. And it's so easy to keep Suntile clean and fresh looking with merely a damp cloth.

Most important, Suntile is installed only by Authorized Dealers who guarantee their installations.

SEND FOR OUR EXCITING NEW COLOR PALETTE FOLDER

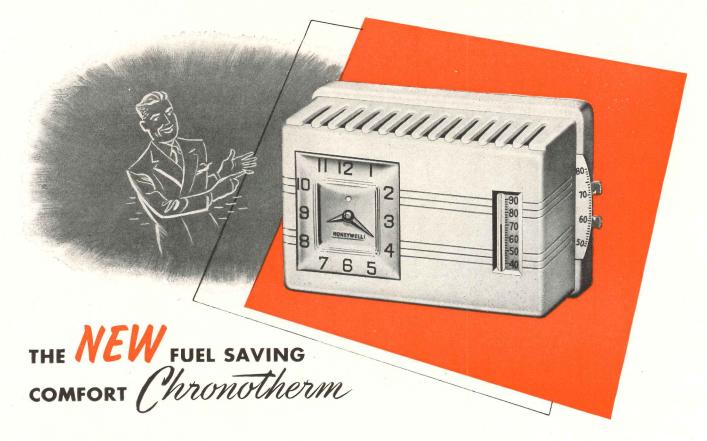

Color-Balance has been given real meaning in the new Suntile Color Palette created under the direction of Faber Birren, leading color authority. In this folder you'll see 22 exciting wall colors, 27 beautiful colors in unglazed ceramic mosaic tile and 10 unique Suntile Camargo colors. These colors have been selected to give you maximum flexibility in your search for effective color treatment in both walls and floors. Write us, Dept. AR-2, for your FREE copy today as well as the name of your Authorized Suntile Dealer. See our Sweet's Catalog. The Cambridge Tile Mfg. Co., Cincinnati 15, Ohio.

ENVIRONMENT CONTROLS DESIGN

House for Dorothy Levin, Palm Springs, California

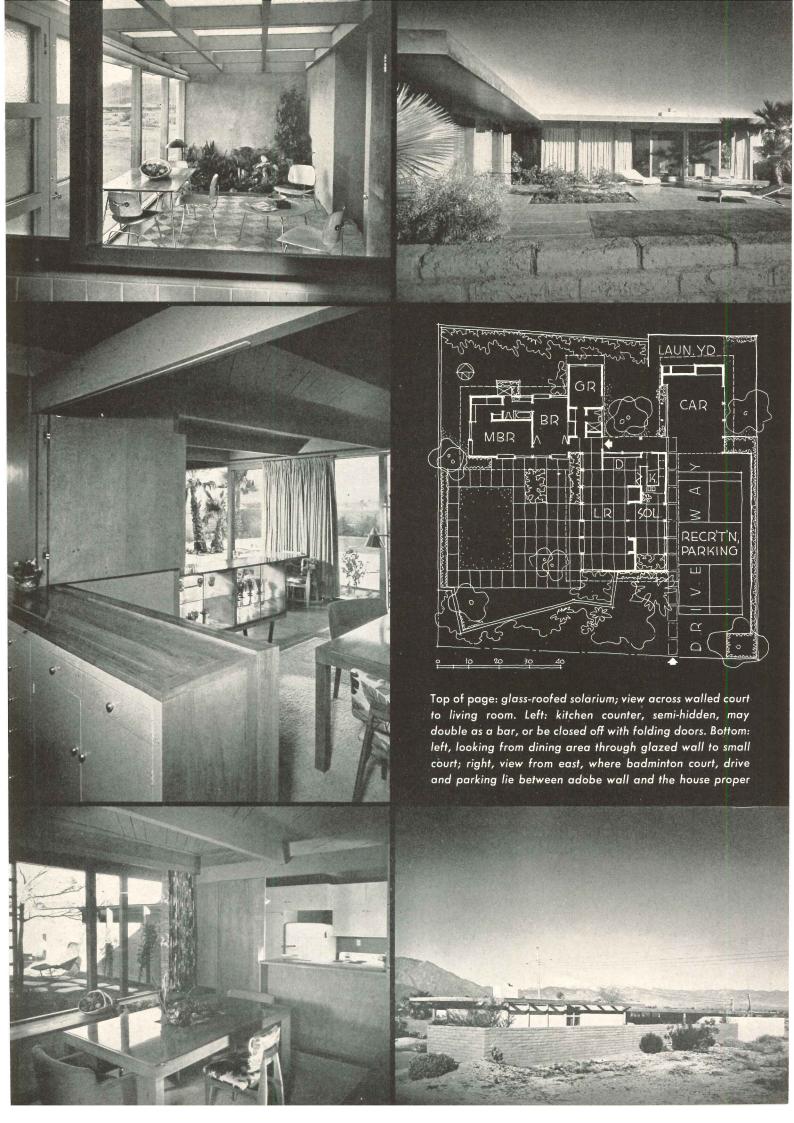

William F. Cody, Architect

Julius Shulman Photos

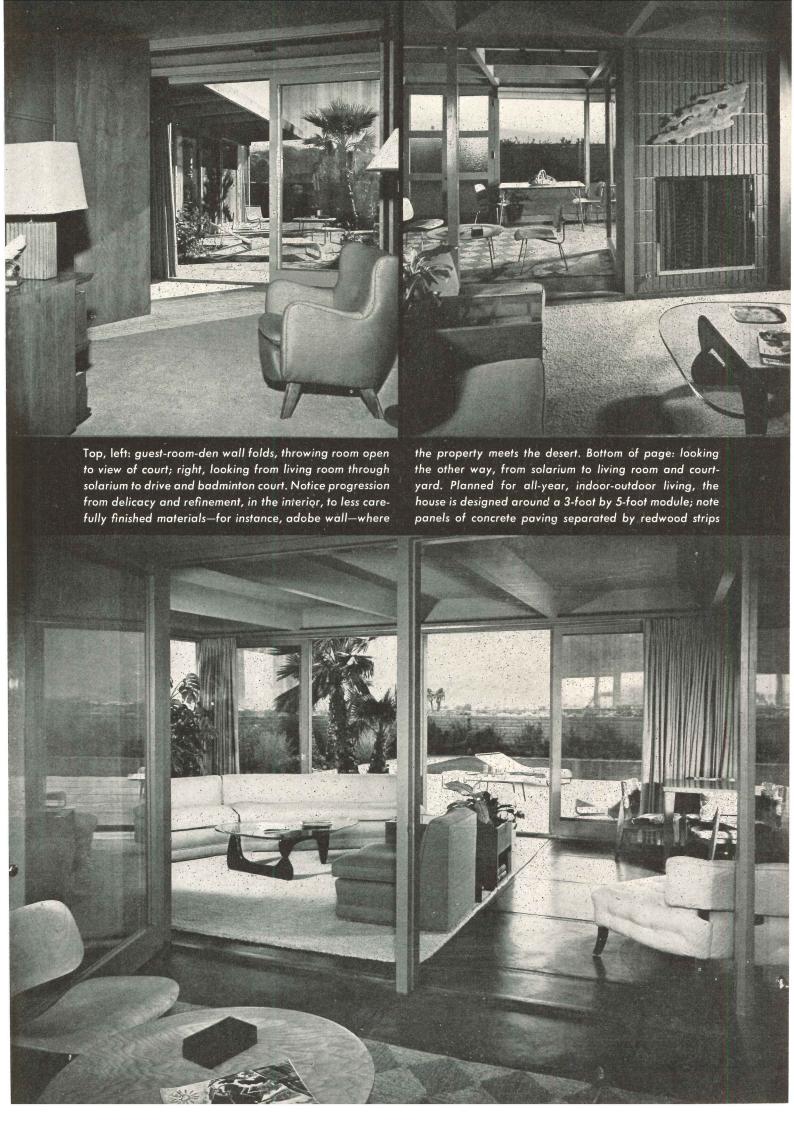

Good architecture has always taken into account local topography, climate, customs and economics; however, one seldom finds a building so closely related to its locale as is this house. In a new Palm Springs subdivision, it has a more distant view of the mountains than many of its type in the vicinity, and as the subdivision grows it is bound to acquire more urbanity than will outlying houses. Yet the desert's influence will continue. Protection against extreme temperatures and brilliant light, co-existent with glass walls, and development of the entire lot (not merely the house) as the living unit, were the principal design postulates. Terrace and living areas are laid out on a 3-by-5-ft module, expressed in floor stripping and window mullions.

Julius Shulman Photos

From almost any point indoors there is a pleasant vista through adjoining rooms, across the adobe wall surrounding the planted courts, to the San Jacinto Mountains. Interior walls of guest room and kitchen fold so these rooms can be thrown open or closed off. The exterior shower is for use with a possible future swimming pool. House is wood frame; ceiling joists are exposed in main rooms, with glass roof panels in solarium. Roof surfacing is heat-reflecting; insulation is mineral wool; heating, electrical. There is a cooling unit, and windows have awning-type screening to cut heat and glare. Floors are asphalt tile over concrete; terrace paving, cement with redwood strips.

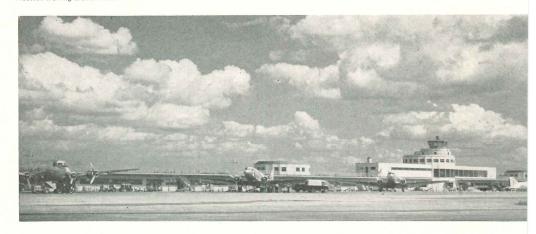

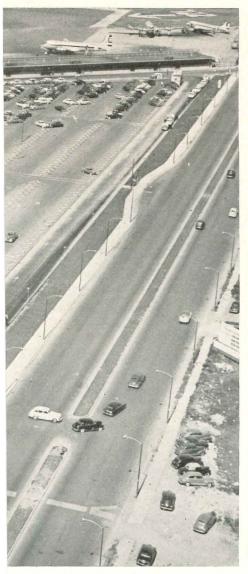

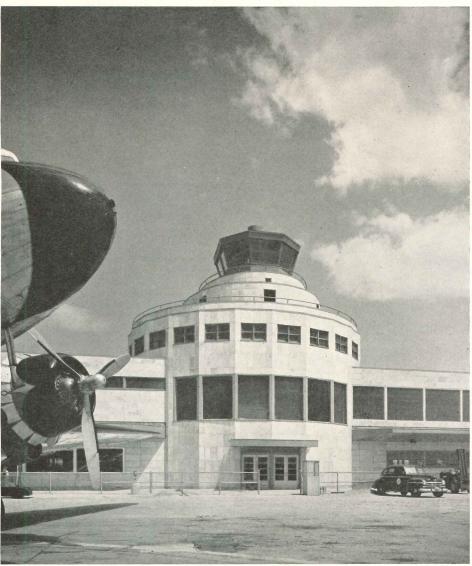

STANDARD UNIT SCHEME VARIED TO SPEED

Hedrich-Blessing Studio Photo

Paul Gerhardt, Jr.
City Architect

Hedrich-Blessing Studio Photo

AIRPORT TRAFFIC

Chicago Municipal Airport Terminal

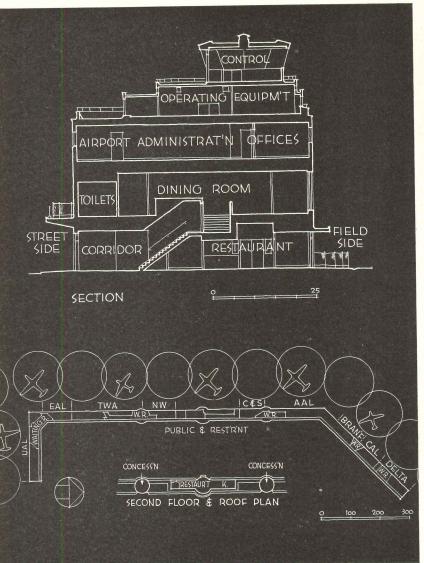

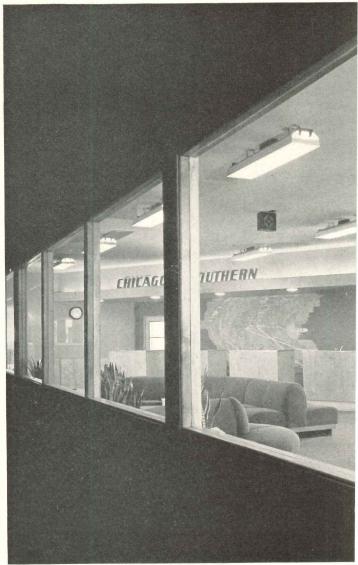

A extended unit scheme helps allay confusion for some 2,500,000 passengers accommodated yearly in the Chicago Municipal Airport Terminal: each air line has individual facilities to serve its planes and passengers. Two lines share each waiting room. A corridor links units to the central block housing administration, operational space and concessions. The two major zones, air and ground transport, are bridged by a narrow plan, permitting short, direct flow of separated passenger and baggage traffic. Casual spectators

have good observation posts, removed from operational activities, in a central public space and promenade roof deck.

The building was designed as low cost construction to be amortized within 10 years. Planning for a longer period was deemed unwise: perpetual change is expected in aviation requirements. For flexibility, the steel structure uses a module of 3 ft 4 in. longitudinally, six units to a bay. Exterior walls are buff-tinted concrete slabs, backed by concrete block; roof is poured gypsum.

CHICAGO AIRPORT

Hedrich-Blessing Studio Photo

Compact, private working space for airport operation and administration is provided on top floors of central tower. Glazed control room has remote controls for field lights, radar, radio and recording devices. Equipment is on floor below and in basement. Building is 40 ft wide, almost 1/3 mile long; has stations for 15 planes

Five waiting rooms (three shown below left) serve nine air lines. Each line has separate baggage rooms, ticket counters and offices. Design standards for furniture, signs, etc., set by air lines and architect. Counter design at top left provides extra baggage space, facilitates traffic. Floors are asphalt tile, ceilings acoustic plaster. Partitions are gypsum tile and plaster, built free of structure for easy change

Hedrich-Blessing Studio Photo

Hedrich-Blessing Studio Photo

Concessions help defray airport operating costs. Revenue is derived from parking meters, promenade deck, lockers, clocks and, above all, eating facilities. Main dining room overlooks field (above right), shares second floor of central tower with kitchens. Restaurant on first floor (below right) is served by dumbwaiters, remains open 24 hours a day. Refreshment stands are in flanking towers on promenade deck. Refrigerators and locker rooms are in basement

REDEVELOPED WITH A FLAIR

First Step in Scheme for Palm Springs Corp., Palm Springs, Calif.

A. Quincy Jones, Jr., Architect; Paul R. Williams, Associate

In this restaurant's first season, customers were so successfully drawn into the interior court and surrounding shops that the owners of the property are now trying to speed up the remodeling of the entire block. As the photographs on these four pages show, considerable flair and flavor were used to good effect as a customer lure.

The new restaurant building was the first step in the remodeling project. Its design was complicated by the fact that the existing foundation and basement had to be used, and also by the leases already signed with four different types of tenant. The building houses the Town and Country Restaurant, the offices of "The Desert Sun," Palm Springs' newspaper, and three shops, plus the offices of the Palm Springs Corporation, owners of the property, and four small apartments. Exterior walls are cement plaster and redwood; interior walls are plaster, redwood and Roman brick; ceilings are acoustically treated. Framing is steel.

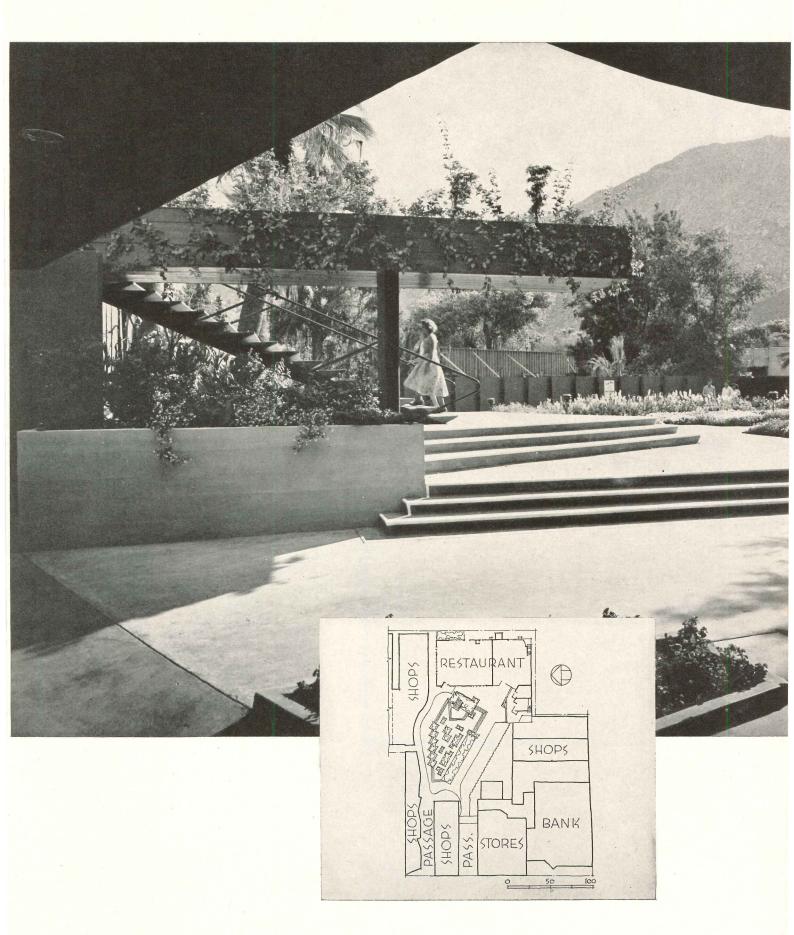

Completion of the entire project originally was expected to take two or three years and called for a careful construction schedule. To avoid even brief interruption of business, as one section is finished, a tenant from an untouched section is moved into it to make way for further remodeling or rebuilding.

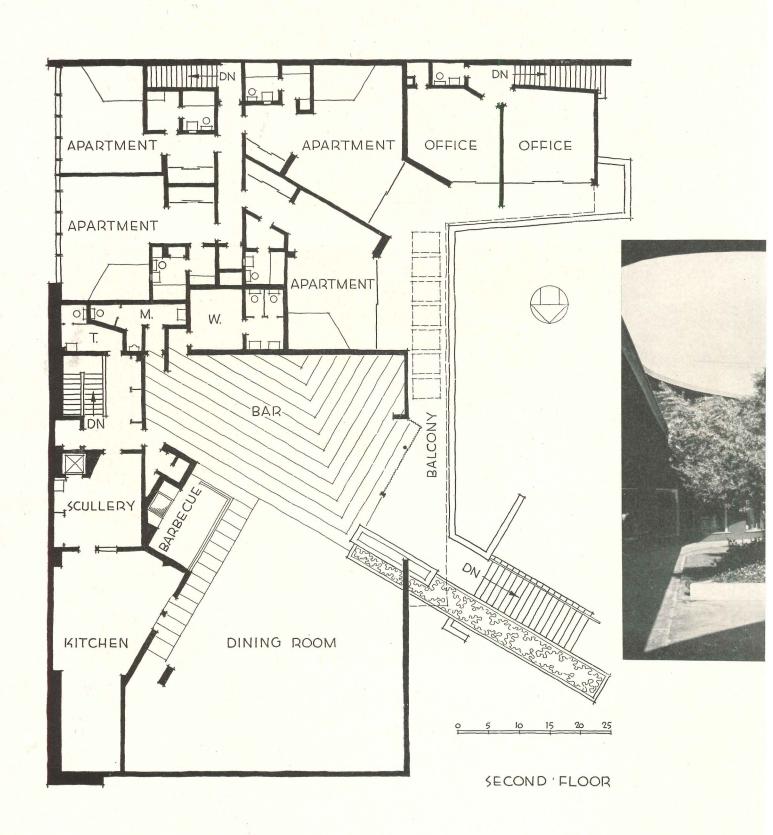

Julius Shulman Photos

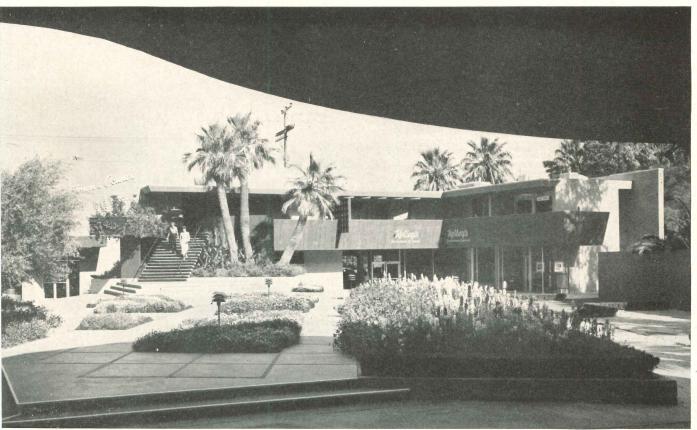

Spark of the redevelopment scheme is the atmosphere-packed patio leading to the Town & Country Restaurant. The restaurant building, first one completed under the plan, houses also offices and shops, and has four small apartments on second floor (see plan, next page)

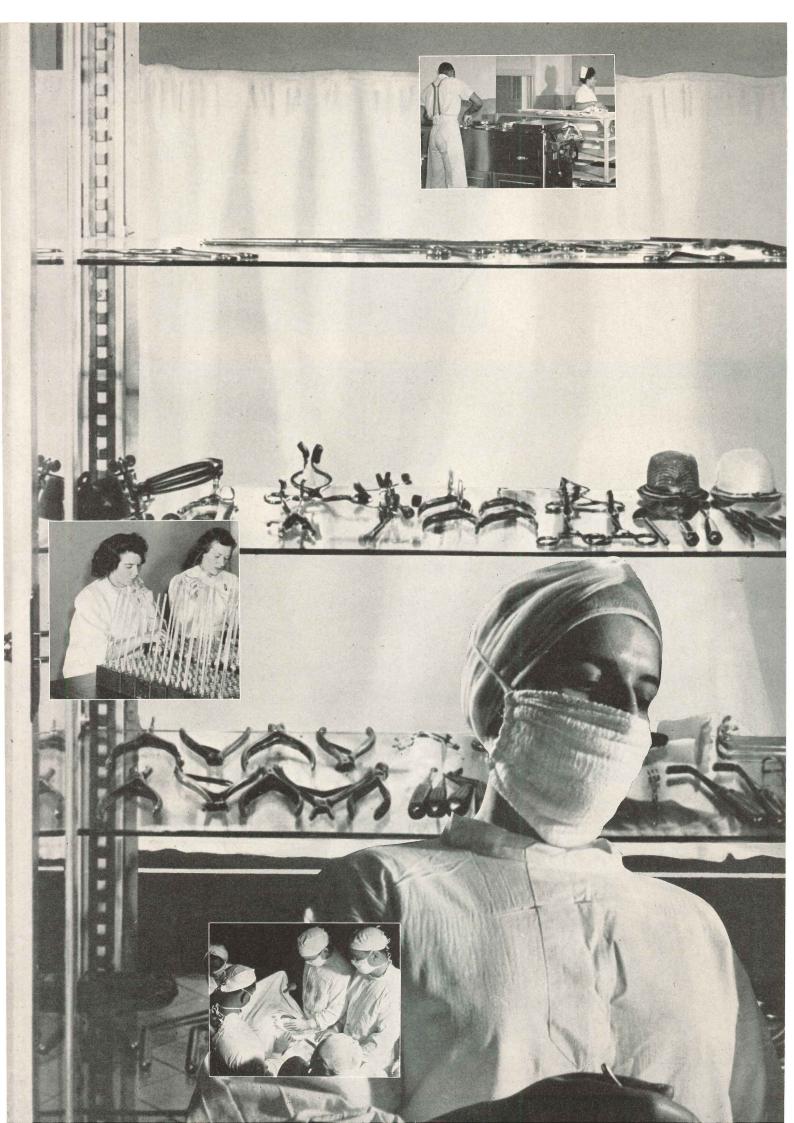

The second-floor apartments have their own entrance from Indian Avenue along the south side of the block, but shops and restaurant face the court (opposite page). Commercial tenants are varied, including the local newspaper, and three different types of store

Julius Shulman Photos

HOSPITALS

ARCHITECTURAL RECORD'S BUILDING TYPES STUDY NO. 158

DOUBLING the amount of federal funds for hospital construction — one of the final authorization acts of the Congress last fall - makes hospitals perhaps the most important of all planning assignments now before architects and engineers.

It means not only more hospitals, of all kinds, in the future; it also means more architects designing hospitals. What was once considered a fairly specialized task for designers is now work for any well organized architectural office, as America becomes increasingly determined to bring better hospital service and medical care to large city and remote area alike. Doing a hospital of course is still a highly intricate assignment, made more so by each advance in medicine. At the same time more and more data are available to planners. The careful basic research of the architectural staff of the U. S. Public Health Service, under the direction of Marshall Shaffer, has put before the design profession a valuable fund of planning information. (See the following studies in Architectural Record: "Elements of the General Hospital," June 1946; "Type Plans for the General Hospital," January 1948; "Public Health Centers," July 1942; and the Building Types Study on Hospitals, May 1949.)

In 1950 the RECORD will step up its coverage of hospital design. This current Study deals largely with special types of hospitals and other health facilities, though one general hospital is also included, and others will be presented throughout the year.

It is worth noting that the more special types of hospital may be expected to appear more frequently in the

lists of projects receiving early concentration was on the acute general hospital and the smaller health

federal aid. While the facilities for rural areas, the Hill-Burton Act is quite broad. It is to be expected that the increased allotments will reach further into the needs for facilities for cancer, T.B., mental illness, and for

Under terms of the new legislation, federal grants to states are increased from \$75 to \$150 millions annually, and the period during which allotments can be made is extended to June 30, 1955. In addition a new formula has been developed which permits a federal contribution ranging up to 66.6 per cent of the total construction costs for new hospitals as against 33.3 per cent under the original law. The new law provides also for federal grants totaling \$1,200,000 a year for five years for research programs looking toward coordination and improvement of hospital services.

Surely the new law speaks well of the concept and administration of the original hospital program, which took shape in the Hill-Burton Act of 1946. Whatever the fears about the "welfare state," there have been no agonized screams about the program for improving the country's health facilities. From federal offices to volunteer committees in outlying communities the program has won cooperation and interest.

Architects have responded in the planning, in the committee work, and also in the basic study. Large attendance at the Southern Conference on Hospital

Planning and the New **England Regional Seminar** on Hospital Planning sponsored by the A.I.A. have had their share in sharpening the techniques of hospital planning. Meanwhile similar groups of the American Hospital Association, the American Medical Association, and the new American Association of Hospital Consultants have been researching both the technical problems of

planning and the procedure of hospital programming, for better harmony between architects and consultants. Such efforts will add rapidly to the literature on hospital planning, and will insure wise spending of the immense sums available for extending health facili-— Emerson Goble

U. S. Public Health Service photos

TYPE PLANS FOR STATE PUBLIC HEALTH LABORATORY

FEDERAL SECURITY AGENCY

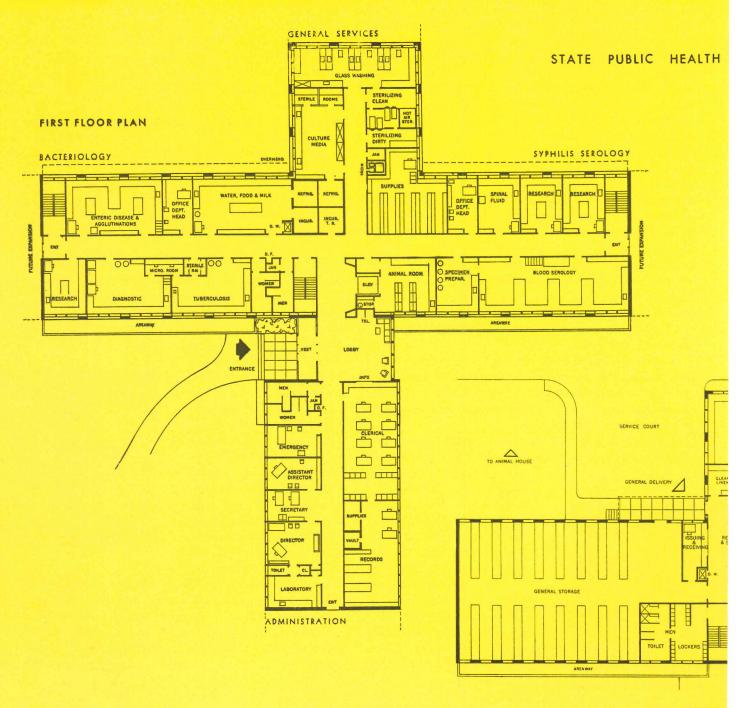

Public Health Service Division of Hospital Facilities

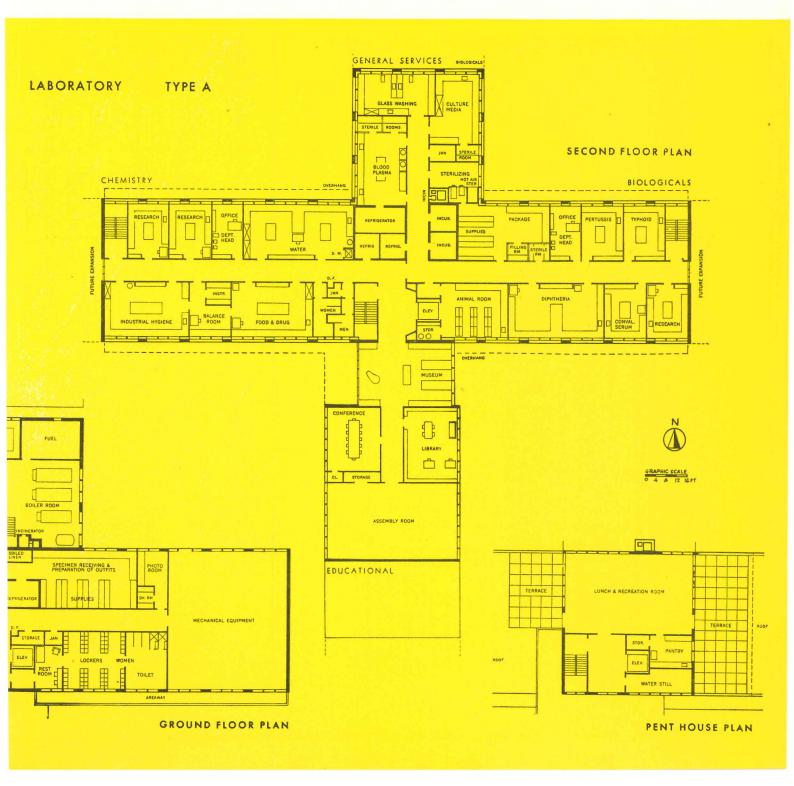

State health laboratories have steadily increased their activities in recent years, usually in facilities that were outdated and inadequate. The need for new buildings has become so apparent that two suggestive type plans have been developed through collaboration between the Conference of State and Provincial Public Health Laboratory Directors and the Division of Hospital Facilities of the Public Health Service.*

These plans are intended merely to assist the laboratory director and his architect in formulating a sound basic program for the solution of their particular problem. They serve also to explain the relationship of

^{*} Acknowledgement is made of the assistance of Dr. Seward E. Miller, Chief, Laboratory Div., Communicable Disease Center, Atlanta, Ga.

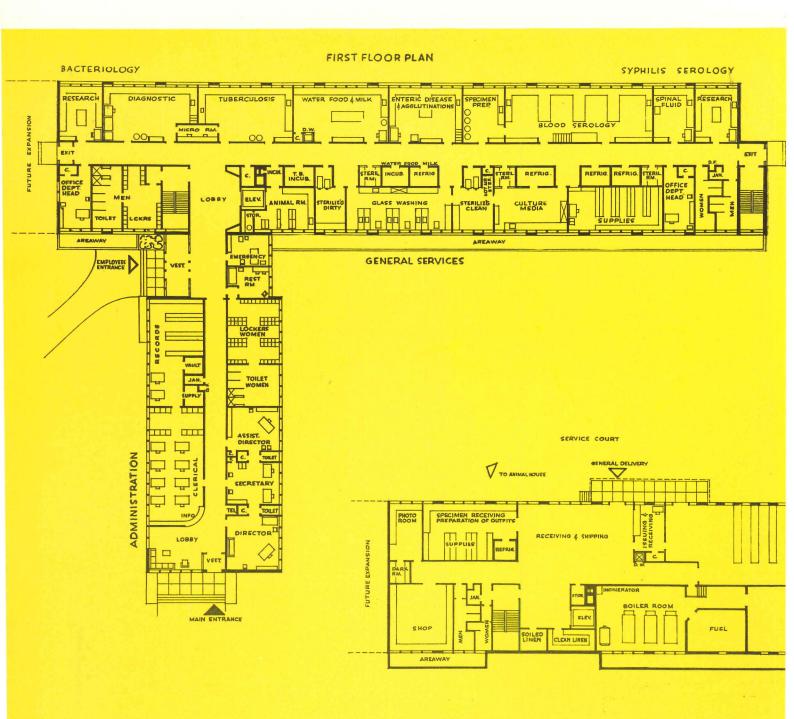

the various elements to be found in a laboratory building of this type. The basic requirements, such as the type of laboratory work to be done, the allotment of space to each department and local site conditions, will vary so much that it would not be possible to develop a plan that would be suitable to all situations. It will be found that the departments and their component elements as shown in these plans will exceed minimum requirements of some states and be somewhat below those of others.

Maximum flexibility, simplicity of piping and ease of expansion are essential in a laboratory building. It should be possible to rearrange spaces and equipment without making changes in the basic building structure or its mechanical and electrical system. Such flexibility will greatly reduce the time and expense required to

alter laboratory space as the changes in character of work occur. It should be possible also to expand the building without disturbing the basic arrangement of the plan.

The accompanying Type A plans illustrate this principle. The fixed facilities, such as the elevator, main stairs, toilets, "walk-in" refrigerators and incubator, have been placed in central location. The general services (glass washing, sterilizing and culture media) are located in the rear wing while the laboratories are in the two side wings. This arrangement will allow expansion of the general services and the laboratories.

Other solutions are possible, of course. An alternate plan, Type B (p. 102), has been developed by the Public Health Service, in which the laboratories have been placed on the north side of one wing and the general

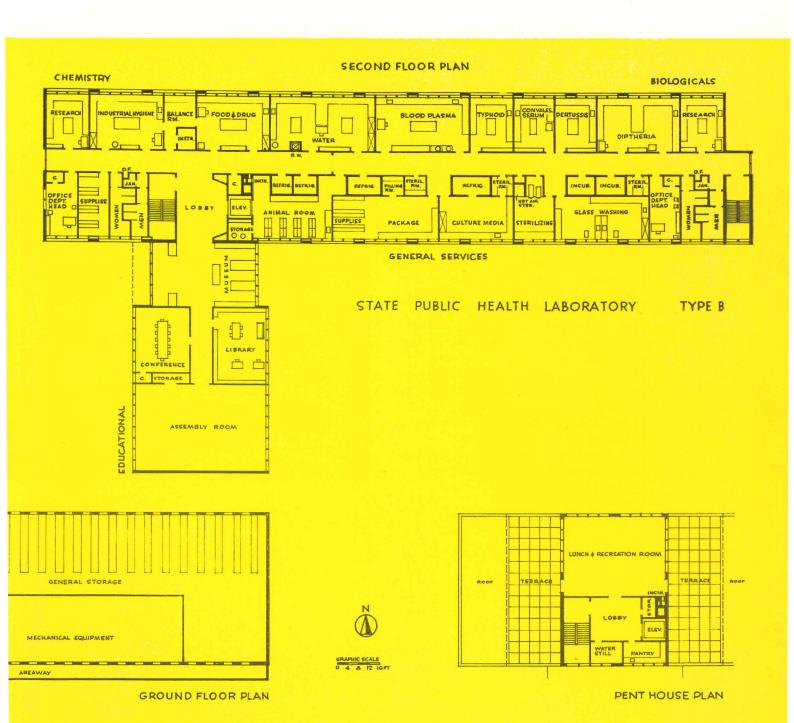

services on the opposite side. The administration and education departments are located in a separate wing on the south side of the building.

The major services provided in the state public health laboratories at the present time are in the fields of bacteriology, chemistry and syphilis serology. The manufacture of biologicals is done to a limited degree. Provision must also be made for research, teaching, central services, animal quarters, administration and storage facilities. It is highly desirable to provide a separate animal house. Where a virology department is required it too should be in a separate building.

The bacteriology department should be located near the general services because of the volume of sterilizing, glass washing and culture media required in its work. Considerable refrigerator and incubator space is required, and in most cases the "walk-in" type is desirable. The preferable location for the refrigerators is near the water, food and milk laboratory of the department. A separate incubator is suggested for tuberculosis work and at least one sterile room for the department is required. Generous provision of space for a research laboratory is highly recommended. In those laboratories which do a considerable amount of microscopic work, it may be desirable to provide a small room or alcove screened from the glare of natural light.

Sixteen feet in width and twenty feet in depth have been used for the smallest laboratory in these plans. This size permits use of laboratory benches on the exterior wall and side walls to take advantage of the natural light and an island table 3 ft. 6 in. wide (without utilities) in the center leaving sufficient space for circulation.

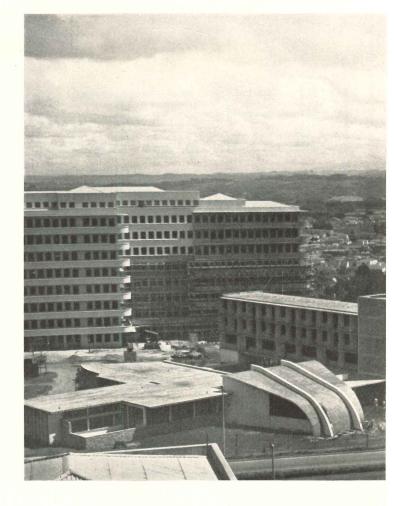

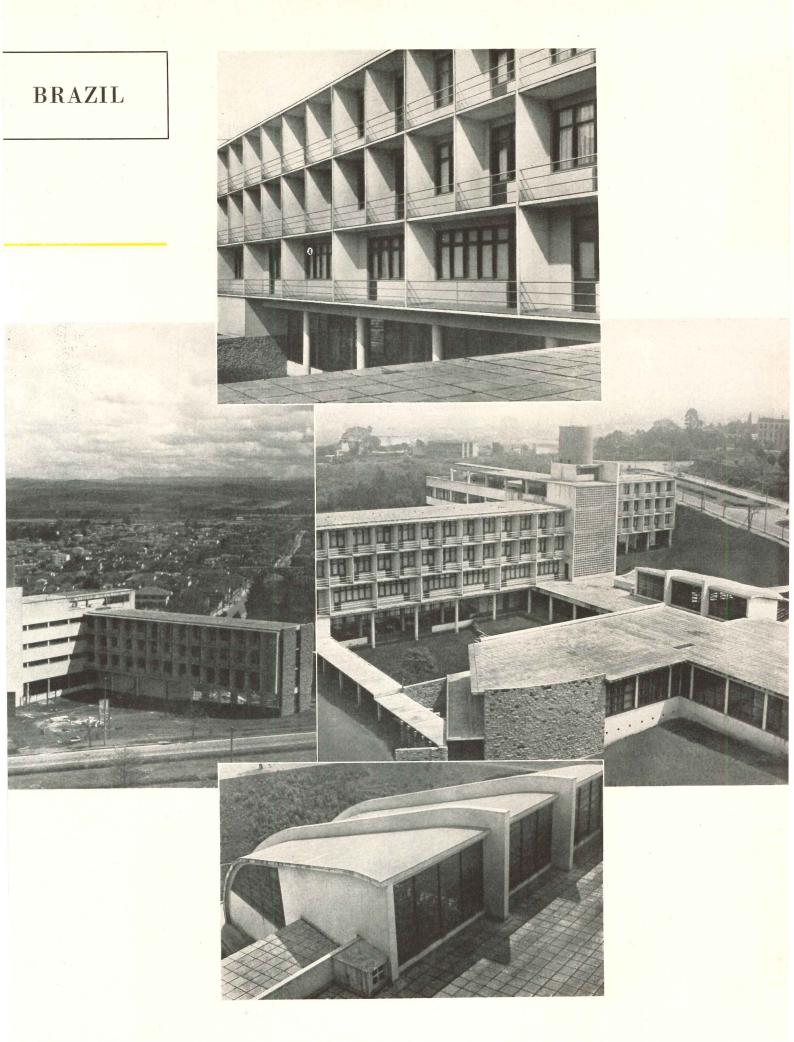

NURSES' SCHOOL AND RESIDENCE FOR SÃO PAULO

Peter Pfisterer, Chief Architect, Brazilian Field Party, Institute of Inter-American Affairs

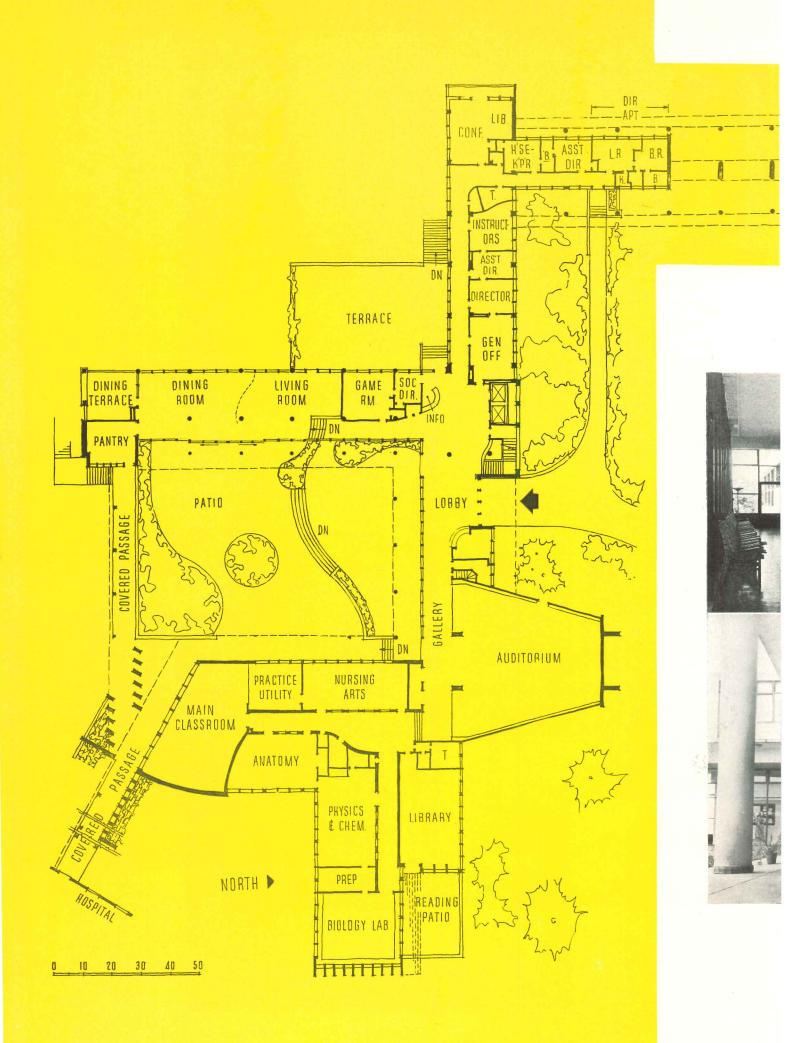

Social customs peculiar to South America make it difficult to attract girls of educated families to the nursing profession. It was therefore important in the building program of the Medical Center of the University of São Paulo not only to build a nurses' school and dormitory, but also to create a pleasant atmosphere of informal distinction, if not luxury, with particular emphasis on inviting living accommodations, ample facilities for social gatherings and recreational space. The following plan features were directed toward that end:

- 1. The loosely knit main floor, with multi-purpose auditorium and gallery forming a link between school and residence.
- 2. The design of the area for dining and social activities, extending on one side through sliding doors into an intimately landscaped, sheltered patio, and connected on the other side with an open terrace commanding a dramatic view over the city to distant mountains.
- 3. Indoor and outdoor access to a paved recreation porch under the center wing of the residence at basement level, opening onto garden and tennis courts.
- 4. Reading patio, surrounded by garden walls and partially shaded by the pergola, easily supervised and accessible from library.
- 5. Lounges and living rooms with kitchenettes at focal points of residence wings on each floor.
- 6. A large roof terrace over central wing of residence, partly shaded by canopies and pergola, partly open.

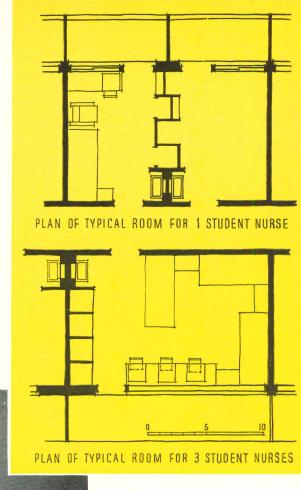

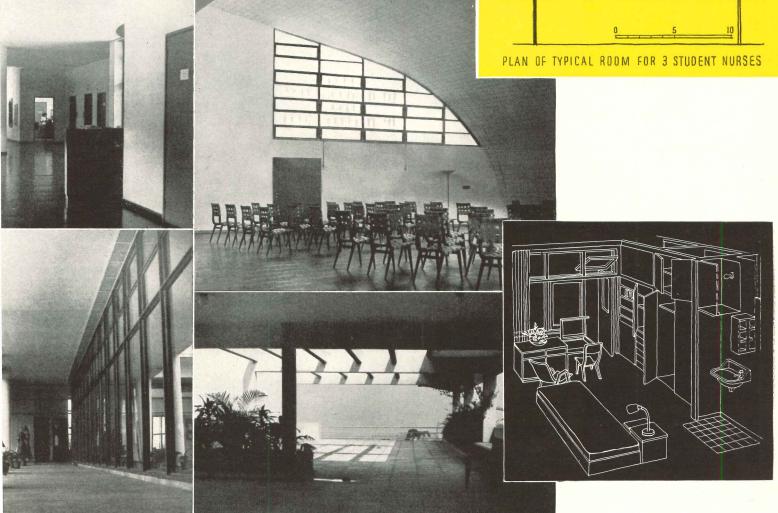

FEBRUARY 1950

In spite of costs, the building committee decided that most students should have private rooms. Many first-year students, on the other hand, seem to prefer the company of classmates. One floor of the Z-shaped residence was subdivided into rooms for three nurses each (see detail plan). Each of these rooms takes twice the area of a single room, and therefore does not disturb a modular layout with one single room as the unit. Each pair of rooms has brick non-bearing partitions at column points, and shop-fabricated, closet and cabinet wall as the separating partition, with built-ins to save usable space

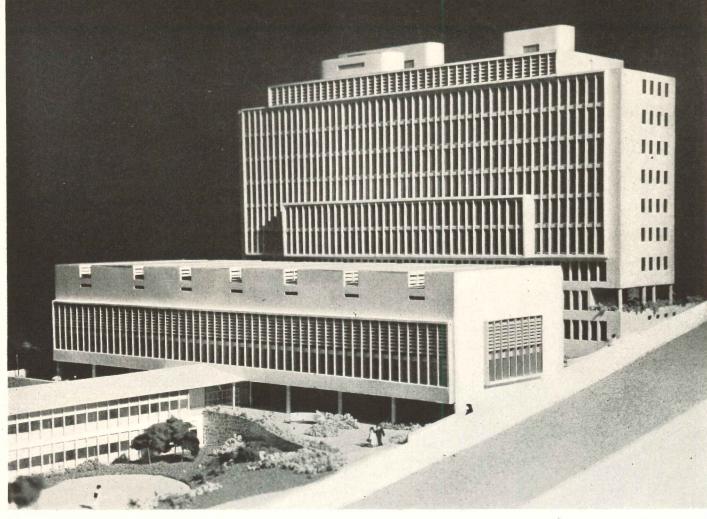

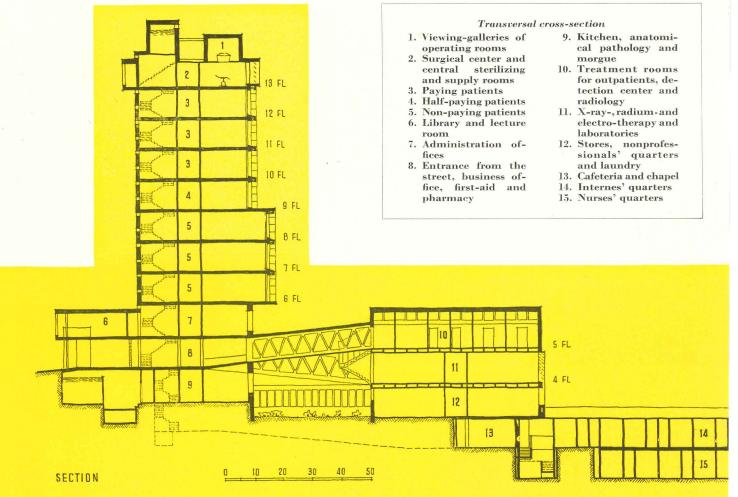

Foto-Curt

INSTITUTO CENTRAL DO CANCER, SAO PAULO

Hospital Antonio Candido de Camargo; Rino Levi, Roberto Cerqueira Cesar, Architects

This projected South American cancer hospital provides an interesting comparison with North American progress in hospital design, always remembering, of course, that there are some foreign customs to be taken into account. It might seem strange, for example, to see two separate banks of elevators, one for "paying patients," the other for "charity patients," but in South America it seems perfectly logical. One might hazard the guess that eventually such differences will gradually disappear, as each point is evaluated, but probably they never will completely.

The three building units shown are: one for hospitalization of some two hundred patients, a second for diagnostic and treatment facilities, the third for living quarters for doctors and nurses.

The hospitalization unit of eleven stories provides beds for about 125 charity, 30 semi-private and 45 private patients. Patient rooms are oriented away from the street to the northeast, receive sun from early morning to mid-afternoon, and are effectively isolated from traffic noises. They are, however, exposed to possible annoyance from the laundry and employees' dining room on the first floor of the adjoining adjunct service unit.

Wealthy upper class patients are the prime source of revenue in many countries. It is customary in Latin America to give them added facilities and complete privacy where conveniently possible. The separation of paying patients from charity patients in both inpatient and outpatient sections is clearly evident. Waiting rooms are separate and special bath and dressing rooms are provided where charity patients may presumably put on clean clothes before entering the hospital.

The architects state that the two separate elevator groups will be used indiscriminately for hospital service functions. It must be pointed out that while segregation of paying patients is successfully achieved by this division of elevators into two separate groups, a sizable service control problem has been created for the nurses on the patient floors and the operating room floor.

There are only fifteen patients, one to a room, in each paying patient nursing unit. This low patient-nurse ratio, which makes nursing care per patient excessively expensive, is due to the Latin American custom of providing an extra bed in each room for the patient's companion or private nurse.

An interesting feature in the plan is the cantilevered service corridor on the surgery floor which provides access from the elevator to service rooms and the sterilization center without congesting the main operating room corridor.

The three-story-and-basement second unit of the hospital group is closely connected by ramps to the hospitalization unit on the south and by corridor to the staff living quarters on the north. The hospital diagnostic and therapeutic facilities for both inpatients and outpatients have been planned in this section. Outpatients enter directly from the admission department by ramp up to the third floor examining and radiographic department or by ramp down to the second floor therapeutic services. Separate waiting rooms for charity and paying patients are again provided. Inpatients must descend to the first floor of the hospitalization building and cross over the same ramps used by outpatients to reach these facilities. There appears to be a lack of stretcher waiting space for inpatients.

The kitchen is well located with relation to nursing unit service. Food service from the kitchen to the help and staff dining rooms on the lower floor of the treatment building is perhaps a little inconvenient.

Translation and analysis by Edmund J. Whiting, A.I.A.

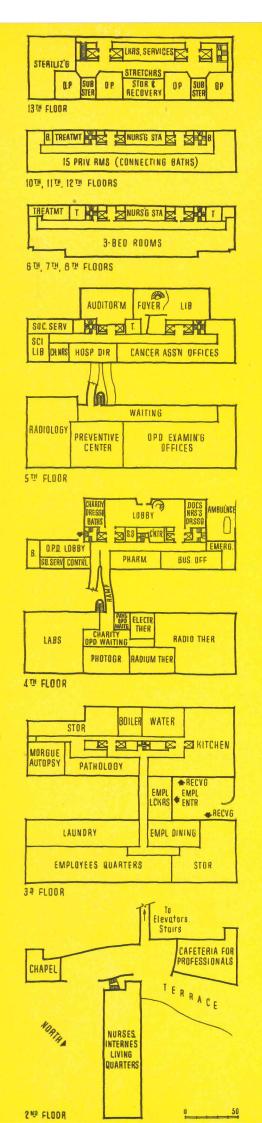

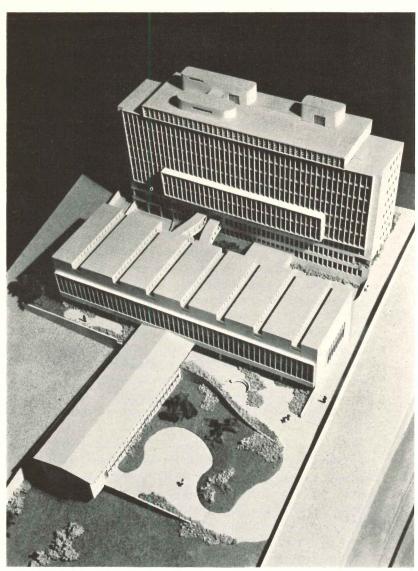

Foto-Curt

The isolated yet convenient relationship of the staff living quarters in the third building unit is well worked out. Terracing, using the natural slope of the property, has been done with pleasant informality.

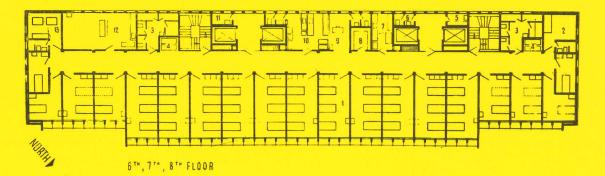

As a general observation on the hospital group it must be observed that no day rooms or solariums, nor recreational or occupational therapy facilities appear in the plan. It is unusual in a cancer hospital of this size and importance that facilities to encourage the psychological well being of patients were not included as a necessary part of the program and planning.

CANCER HOSPITAL FOR ROSWELL PARK MEMORIAL INSTITUTE, BUFFALO

For Department of Health, State of New York, Isadore Rosenfield, Architect

ONE of several projected cancer hospitals, this one well illustrates the complications of such an institution. It has everything from isotopes housed in thick concrete walls to a beauty parlor, the latter explained by the enlightened concept of hospital care which treats the whole patient, not merely his tissues.

The new buildings here will provide more than 500 beds and add a great variety of laboratory facilities to a 50-year-old institution that has gradually burst through each new building added. The present site will be used, and the new facilities must place their feet down carefully amid the old, many of which will later be torn down, and others converted.* These considerations largely determined the form and disposition of the new buildings. The architect would have liked, for example, to keep some of the wings in a linear arrangement, but had to turn their ends to form a shallow U because of site restrictions.

The basement contains the usual services and two unusual ones. The usual admonition not to put the kitchen in the basement is here taken figuratively. As the ground slopes from north downward to south, the basement kitchen will have ample light and ventilation. An elevator originating in the kitchen is to deliver food trucks directly to the serving pantries on the several patient floors.

Consistent with this age, the right hand south wing contains the radiation laboratories, with their radium and isotopes. Much possible grief is avoided by placing these services in direct contact with the earth. As an additional precaution, the overhead slab is to be two feet thick, many of the walls are to be of concrete from one to two feet in thickness, and various other measures are to be incorporated in the plans and specifications against contamination and injury from stray radiation.

The entire first floor is taken up by the outpatient department. Some of its features, like the diagnostic and the therapeutic x-ray departments, will serve inpatients as well as outpatients. These departments, therefore, are located under the block of nursing units for immediate accessibility by inpatients. The end spaces of the therapeutic x-ray department are occupied supporting piers.

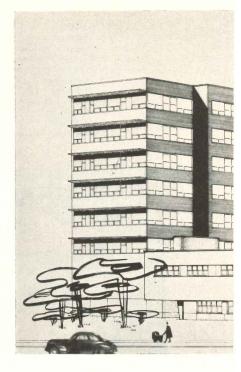

The remainder of the second floor, insofar as new construction is concerned, is occupied by administrative and related functions. Insofar as Simpson Hall (one of the old buildings) is concerned, its laboratories begin

respectively by one- and two-million volt machines. It was felt that even though these were surrounded by

two-foot concrete walls and floors, it would be well

to avoid human occupancy under them. For that reason,

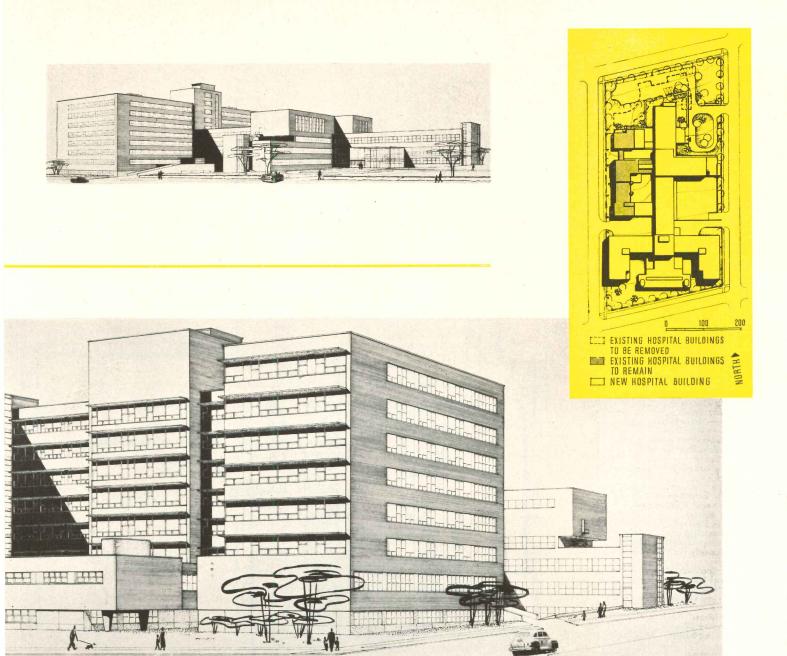

these rooms have no structure under them other than

The patients' quarters (nursing units) begin at the second floor and continue uniformly through the seventh floor, providing 516 beds in 12 nursing units of 43 beds each. The wide gradation in patient room types, the day and dining facilities, and the integrated units of doctors' office-treatment room-nurses' station and util-

ity room are worth noting.

^{*} Dr. Louis C. Kress, Director of the Institute, prepared the program for the new project.

at this floor and terminate with animal quarters occupying the fifth floor and one half of the sixth floor.

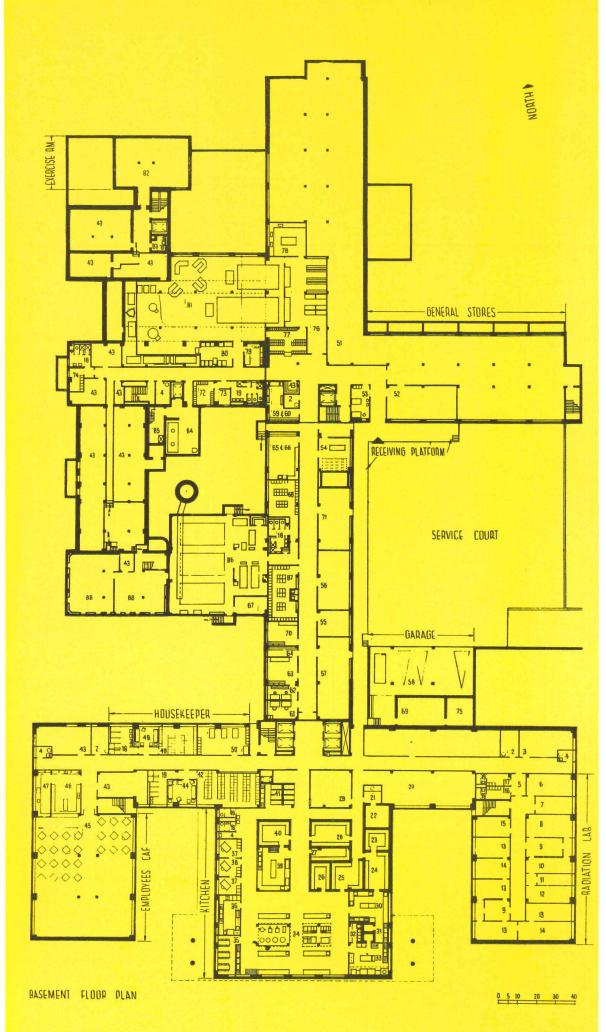

Outpatients, visitors to patients, and people on various business, all enter the hospital through a two-story high metal and glass vestibule which faces Elm Street. This is designed with a small pool, plants, color and sunshine in mind, in order to relax and reassure the tense and anxious patients and visitors as they enter. The modern hospital building must reflect the maxim that modern medicine treats the whole human being. While the outpatients proceed through the vestibule to various clinics on the first floor, visitors and others ascend the vestibule stair to the waiting room on the second floor. People who should not climb stairs have access to an elevator at the first corridor intersection.

While the nursing floors continue to be typical, the

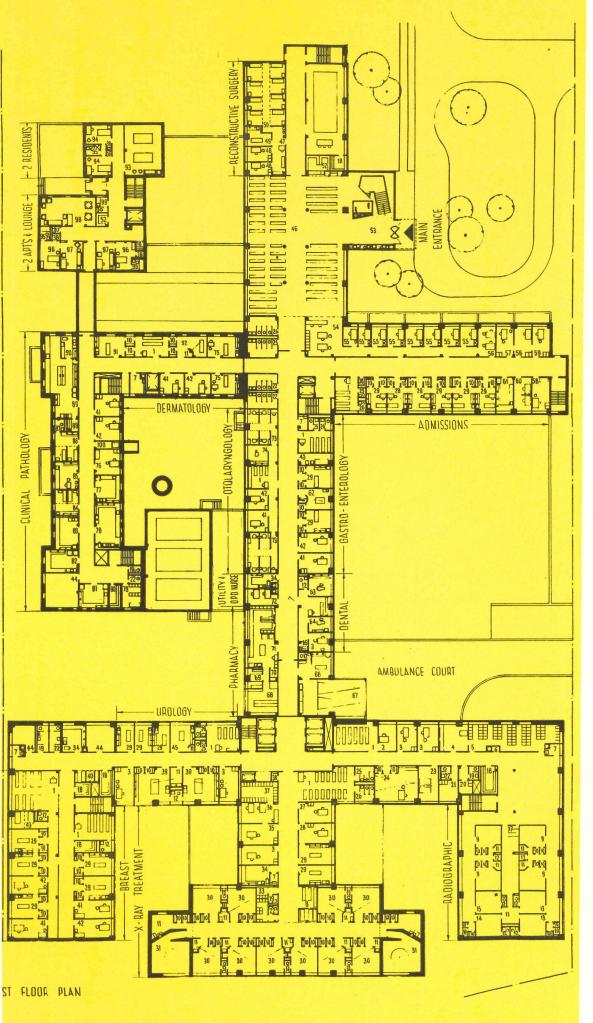

rear wings are different from floor to floor. At the third floor these wings are occupied by surgery and all its supporting services. The contiguous laboratories in Simpson Hall are primarily concerned with the study of tissues obtained from the operating department.

The rear wings at the fourth floor are in a less grim vein. They contain the auditorium, the chapel, with a chaplain's consultation office, patients' library, physical and occupational therapy facilities, canteen, beauty and barber shop, a psychiatric consultation office, and, in fact, all the elements necessary to the treatment of the patient's spirit and the bolstering of his morale. A further extension of this idea will be found in gardens, yet to be planned, which will be seen and enjoyed by most of the patients from their rooms, and also by direct access to the grounds through two passages provided at the basement level.

ST. CLARE'S HOSPITAL

Schenectady, New York

York & Sawyer, Architects

In the category of a general hospital, this one comes about as close as possible to a "standard." It receives no federal or state aid, and thus is not particularly designed within the requirements of the Hill-Burton Act, but is actually quite comparable. But since the hospital was to be a completely new institution, without fixed systems of operation, the plan was kept fairly well formalized and the relations between departments kept as nearly as possible to a standard arrangement. Although it was originally conceived and will be run as a Catholic Hospital, other faiths are represented on the Board, so that it is truly non-sectarian, and strictly typical in every factor from fund-raising to planning.

Planning was left entirely in the hands of the architects,

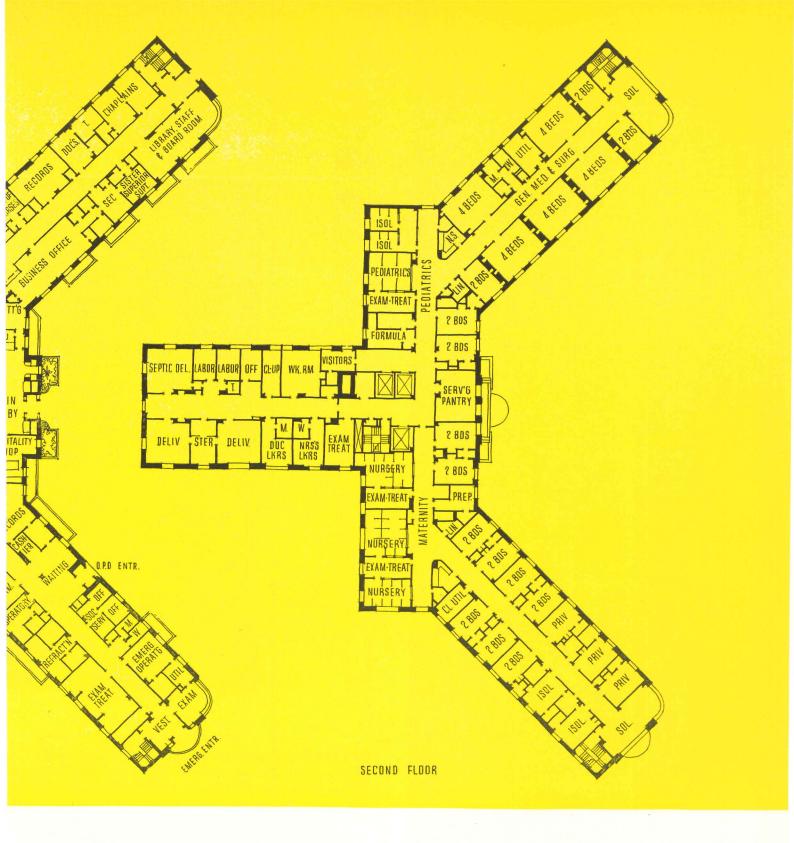

with various Sister superintendents of other hospitals as their consultants. Several doctors and surgeons in the community also met in informal committees with the architects on matters of local practices and needs.

The site consists of about 18 acres, and the building was planned to take advantage of the natural slope for three different entrance levels. The power plant, garages, maintenance shops, together with an undertaker and autopsy suite, all have natural access to the sub-basement level. Since the hospital is to be run entirely by female staff, a men's locker room, together with three small bedrooms have been located on this floor for the

engineering staff who live in, as far removed from the female staff in residence as possible.

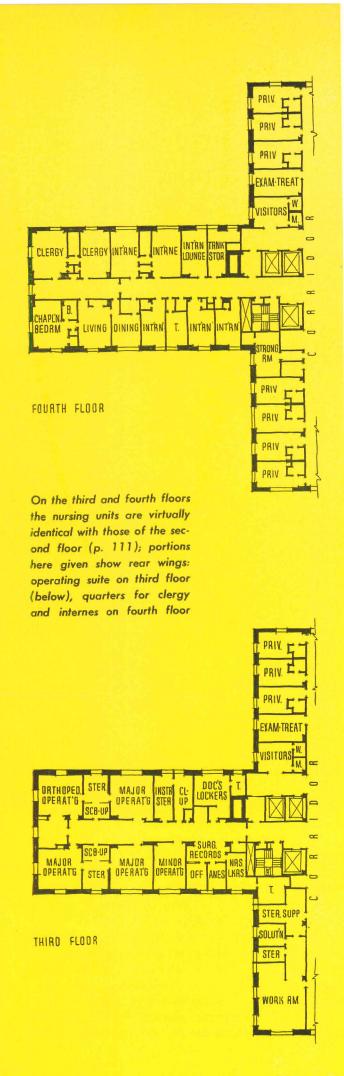

The main receiving platform on the basement level is located closely adjacent to the kitchen and to the general hospital storage area, so that delivery of goods can be made on a level and stored without use of elevator or stairs. On the east side of the hospital on this level, where the grade is higher, are located the main dining rooms for staff, with a separate Sisters' dining room, called refectory, closely adjacent to the main elevator lobby, so that both may be reached without getting into the basement corridors. It will be noted

that the service elevator is so arranged as to have access to the basement service corridors and completely segregated from the passenger elevators, so that easy access can be had to the housekeeper's suite, laundry, and linen exchange, as well as to the female locker rooms. It will also be noted that the main kitchen serves directly into the hospital service elevator for distribution of food to the bed floors by means of heated food cart circulation.

On the first floor, access from the main lobby to the administration quarters and to the main elevator lobby can be had without getting into the corridors serving the general laboratories, out-patient department, x-ray department, or other hospital functions. At the end of the east wing there is a staff entrance for the doctors directly adjacent to the staff room and staff library and other administrative offices.

On the west wing, the architects explain, the entrance to the ambulance department adjacent to which is the O.P.D. entrance, is not an ideal arrangement, in that ambulance cases serious enough to become inpatients will have to be transported by stretcher from the emergency department through O.P.D. waiting room, and thence to the hospital service elevators. It

is a functional arrangement which is difficult to avoid unless something else more serious be sacrificed to obtain another grade entrance, which in this case was impossible.

It will be noted that the location of the O.P.D. in close proximity to the general laboratories, and x-ray department, is good; it will eliminate the necessity for ambulatory out-patients to become involved in the circulation of the general hospital.

The second floor consists of maternity division, together with the obstetrical suite, and a small pediatrics section. Originally this entire floor was to be devoted to maternity cases, and all of the beds on the floor were to be so designated. It was later decided that funds would not be available for completion of one entire floor, the fourth in the building, and that the reduction of beds necessary, because of this cut-back, would eliminate the necessity or desirability for an entire floor

Below: typical major operation room. Right, top to bottom, typical solarium, convertible to bed space in emergencies; work room for operating suite, sterilizing alcove in background; view of nursery; and the general laboratory, first floor

Sigurd Fischer Photos

devoted to maternity. At that time the administration of the hospital decided that the nurseries on the east side of the main corridor on this floor should be devoted to infant pediatrics, with the partition work arranged substantially as needed for infant newborn nurseries, so that if and when the entire floor be turned back to maternity, these needed nurseries could be reinstated. As the plans are published, the pediatrics department is therefore a functional makeshift. Discussions are now under way for returning this entire floor to maternity and redisposing the infant pediatric spaces back to infant newborn bassinets. Pediatrics in this latter case will be relocated on the fourth floor in a segregated wing, which is of course the proper way.

The total construction cost of the building is \$2,788,-112, which, together with the cost of fees, supervision, etc. results in a cost per cubic foot of \$1.83, inclusive of fees but without the cost of movable equipment.

TUBERCULOSIS HOSPITAL Decatur, Alabama

Charles H. McCauley, Architect; Whitten, Snook and Adams, Associated Architects

The more enlightened concept of hospital care is here illustrated in a specialized type of hospital for the care of T.B. patients. This one points up the current idea that a hospital for long-time care has even more reason for close attention to psychological factors than has a general hospital.

So this one puts its patients in a quiet country location. It takes them into pleasant, attractive quarters. It offers not only good medical care but also things like occupational therapy and psychological and rehabilitation treatment. And, very importantly, it rejects the large ward in favor of a three-bed unit. There is a large out-patient department also.

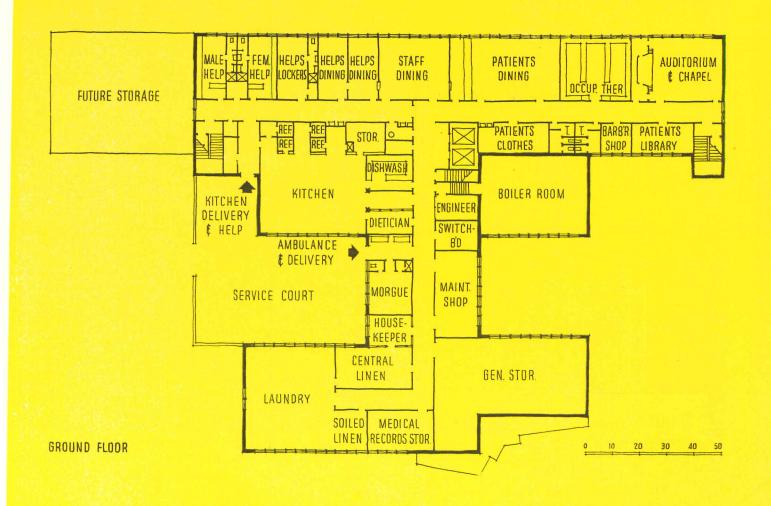

In general the various elements follow closely the suggestions of the U. S. Public Health Service. Nursing units have the offset corridor with most of the patient

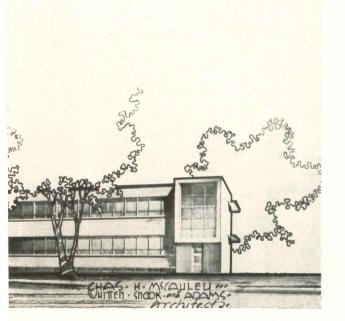

rooms facing south and service rooms on the north.

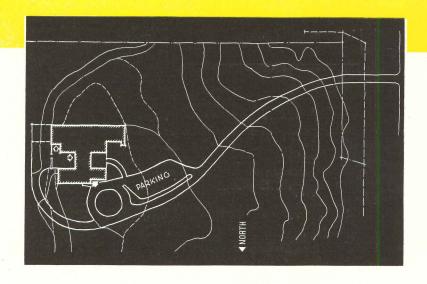

The three-bed room is an innovation; the three beds are aligned perpendicular to the wall. The lavatory is in the bedroom for the use of the patient, nurse and doctor. Each patient has his own clothes closet in the room. The water closet, with bedpan washing attachment and dental basin, is in an interconnecting location between rooms. Oral hygiene of the semi-ambulant patient would be permitted only at the dental basin.

The building is to have concrete frame, concrete floors with tile filler, brick exterior with terra cotta back-up and limestone trim. Interior partitions will be tile, plaster and glazed tile finish. Floors will be covered with rubber tile, ceilings with acoustical tile. Heating will be steam; surgical and medical unit air conditioned.

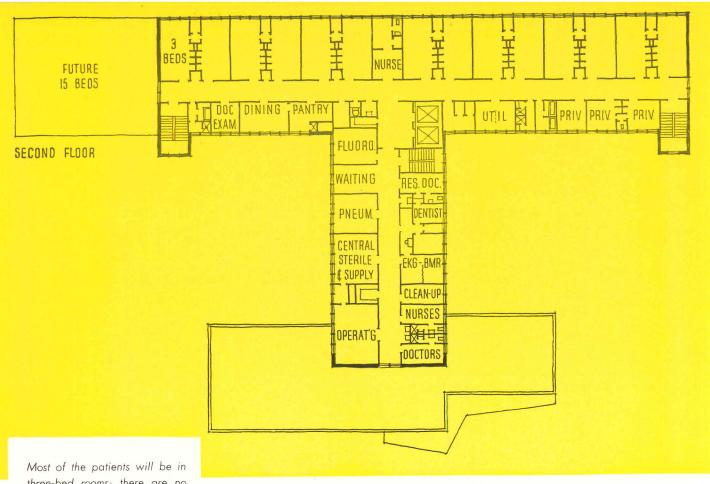

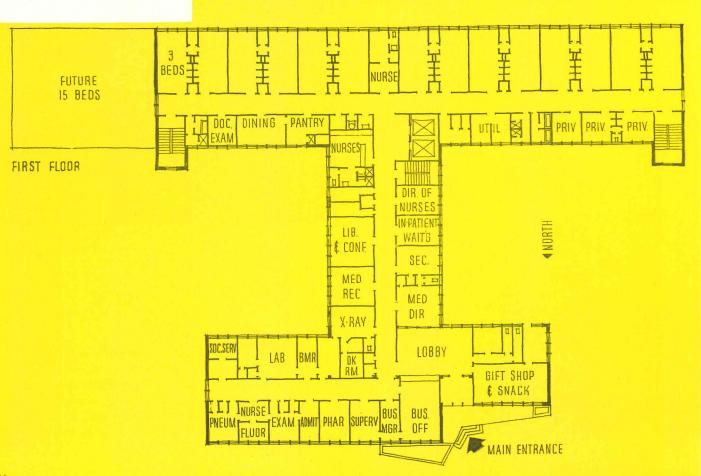

Ground floor brings two entrances at grade level, one for the ambulance entrance, the other for deliveries and help. There are also separate dining rooms for patients, staff and help; also for patients, barber shop, library, occupational therapy room and auditorium; and, of course, various services

Most of the patients will be in three-bed rooms; there are no large wards. These rooms all have south orientation. There are a relatively small number of private rooms, these taking less desirable outlook. Normally the two end units would be used as day rooms for patients

SPACE ALLOTMENTS FOR COMMERCIAL HOTELS

By Frank Harrison Randolph, Professor of Hotel Engineering, Cornell University

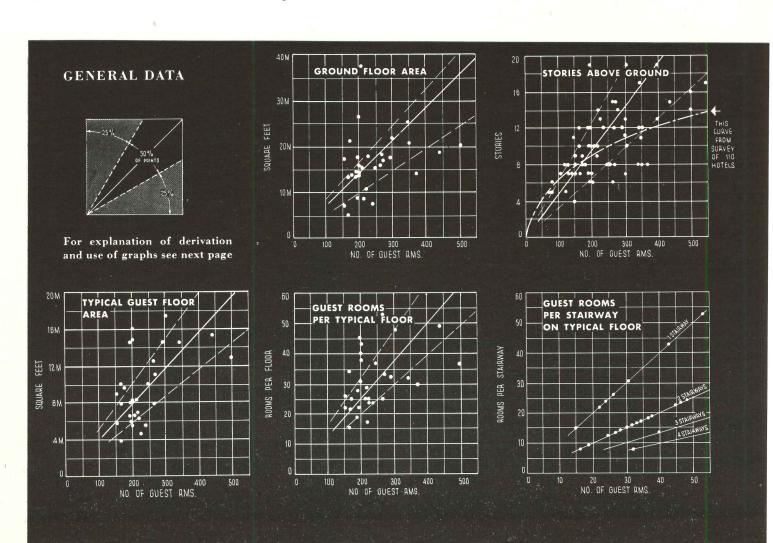

Architects of commercial hotels frequently are handicapped by the lack of factual data on space requirements. Too much space results in excessive investment and operating costs. Too little space makes it impossible for the hotel owners to realize satisfactory profits.

Information can likely be located for a few hotels by the architect, but some may be of wrong size, or of the wrong type or built to meet unusual requirements. The remaining data is apt to be inadequate. This was found to be the case in the writer's class in "Hotel Planning." Consequently, space allotments were measured from the plans of 33 representative commercial hotels, ranging from 125 to 500 guest rooms. The relationship between hotel height and number of guest rooms was investigated for 110 hotels. This data has been translated into the graphs contained here.

They are intended as a reliable guide in planning future hotels, with such changes being made as the times or customs may require, but not going too far from long established values without adequate reason.

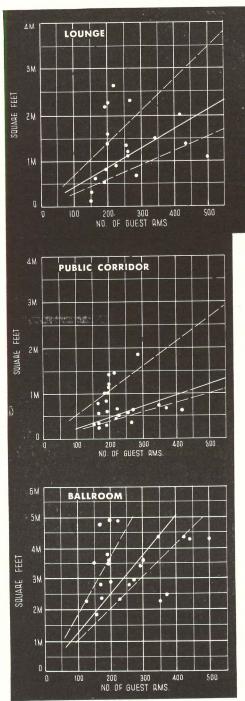

General Data

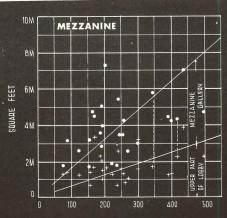

As an example, suppose an architect is planning a 300-room commercial hotel and wants to know its chief physical aspects. From the first few graphs on general data, the following information is found: (1) ground floor area, 22,000 sq ft; (2) height, 11 stories; (3) typical guest floor area, 12,000 sq ft; (4) guest rooms per floor, 38. With 38 guest rooms per floor, a 300-room hotel will require eight typical floors. This leaves three stories for the lobby floor, mezzanine and possibly a ground floor devoted to stores or a service floor.

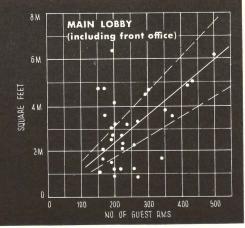

ARCHITECTURAL ENGINEERING

TECHNICAL NEWS AND RESEARCH

EXPLANATION OF DERIVATION AND

To convert the mass of data accumulated from the hotel plans investigated to a clear and usable form, each space or other factor was put on a separate chart, with the number of guest rooms on the base line. Then a point was plotted for the value obtained for each hotel. The result was a chart that was peppered with points, often rather widely scattered. Seldom did the arrangement of the points encourage one to attempt to draw a line through them.

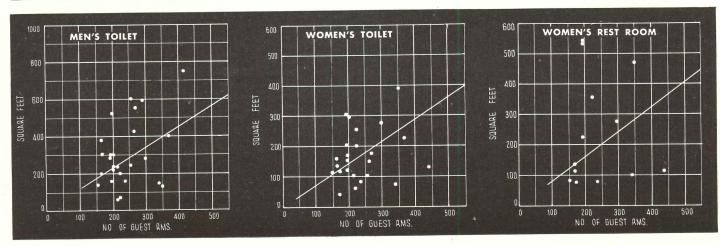

Through the field of points on the graphs, a solid diagonal line was drawn to show the median trend. This line was started at the lower left corner, at the "zero-zero" value. The line was located by trial so that half the points were above it and half below it. On graphs that had sufficient points

to warrant, two broken diagonal lines were drawn in addition. The upper broken diagonal has one-fourth of the total points above it and the lower broken diagonal has one-fourth of the total points below it. Thus the area between the two broken diagonals contains half the points and may be considered as the usual range encountered in practice.

Each trend line has been drawn straight because the data points were insufficient to justify the location of a smooth curve, with the exception of the Stories Above Ground graph.

The relationship between stories above ground and number of guest rooms was investigated for 110 hotels, including a number of 1000 rooms and over (the graph shows only that portion of the curve up to 550 rooms).

PUBLIC SPACE

Each of these foregoing values is an approximation which may need revision as plans develop. It is evident, however, that expectations can be determined at a glance without requiring an assortment of assumptions, tedious calculations or extensive experience with hotel structures.

The graph on stairways shows that most of the hotels investigated have two stairways through guest floors. Usual practice is to have not more than 30 rooms per stairway on the typical guest floor. The average hotel has about 16 or 18 guest rooms per stairway.

USE OF GRAPHS

The plotted points were scattered widely, but a curve of parabolic form drawn through them showed the trend satisfactorily.

Presenting the data in the form of these graphs offers several advantages. The reader immediately sees about how many cases are represented. The relative divergence of the data is obvious. An exceptional case or two has no great influence on the trend line, in contrast to taking an average value which may be influenced considerably by one abnormally high or low figure.

These studies are not presented as the final word on space allotments. They indicate a good method which may serve as a basis for more extensive work and probably slight revisions in the trend lines.

Public Space

The Main Lobby graph indicates 12 sq ft of lobby area per guest room. The lounge was indicated for 65 per cent of the hotels investigated, with about 4 sq ft being provided per guest room. Many hotels use a part of the lobby or mezzanine gallery as the lounge, although it is not specifically designated as such on the plans.

The mezzanine was shown for 70 per cent of the hotels. For each hotel on this graph, two points were plotted — a dot for the mezzanine area and a cross for the upper part of the lobby or "well hole." In several cases these points were connected by a dotted line to emphasize this fact. For example the 345 room hotel had a gross area of 5800 sq ft for the mezzanine and 1800 sq ft for the well hole. The gallery area is the difference between these values or 4000 sq ft.

The ballroom was shown in 70 per cent of the designs studied. From 10 to 18 sq ft of ballroom area per guest room is usual, with $12\frac{1}{2}$ sq ft being the median value.

Ballroom storage (graph not included) is often omitted to the inconvenience of the management in storing tables and chairs. Where provided, it is about 10 per cent of the ballroom area or a little more.

A ballroom serving pantry (graph not included) is needed for banquet service unless the main kitchen is adjacent to the ballroom. The pantry is typically 22 per cent of the ballroom or banquet room area.

In providing public toilet facilities for guests, about 1 sq ft of men's toilet area is furnished per guest room. About 1½ to 2 sq ft per guest room is allotted for the corresponding facilities for women, half of this area being used for the women's rest room and half for the women's toilets.

Concession and Sub-Rental Space

The barber shop is allotted $2\frac{1}{2}$ sq ft per guest room. The valet shop (graph not included) is customarily found in the larger hotels — a little over 1 sq ft per guest room. Often it is not specifically provided in the plans, and the management is forced to convert some service area to this use.

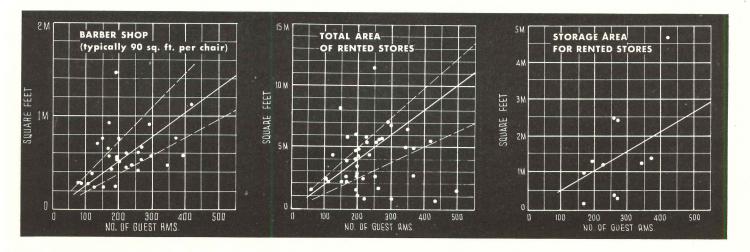

Rented stores are important because the income from them is required to carry the premium cost of a choice location for the commercial hotel. Typically, 20 sq ft of rented store area is provided per guest room. About $2\frac{1}{2}$ stores are provided per 100 guest rooms. The rental value of a store is enhanced considerably if the store is provided with a low rental value storage area, often in the basement.

Food and Beverage Space

Most hotels have a main dining room, with 9 sq ft being provided per guest room. Some hotels have only a coffee shop or its equivalent with 7 sq ft per guest room as the typical value. Many hotels have both facilities. The trend is to minimize the main dining room in present day practice because of the difficulty in operating it profitably.

In planning private dining rooms, the architect must become acquainted with the local demand. The graphs on these are valuable, however, in showing normal expectations.

CONCESSION AND SUB-RENTAL SPACE

ARCHITECTURAL ENGINEERING

TECHNICAL NEWS AND RESEARCH

Data plotted for the barroom were obtained by correspondence with about two dozen hotels to ascertain conditions as of 1949.

Once the scope of the food business is determined, the ratio of the several food service areas, one to another, becomes significant. Main dining rooms usually are about 80 per cent of the main kitchen. Only one-fourth of the main dining rooms exceeded 118 per cent of the kitchen while only one-fourth are less than 69 per cent of the kitchen.

When an auxiliary kitchen is provided, the coffee shop is nearly four times this area.

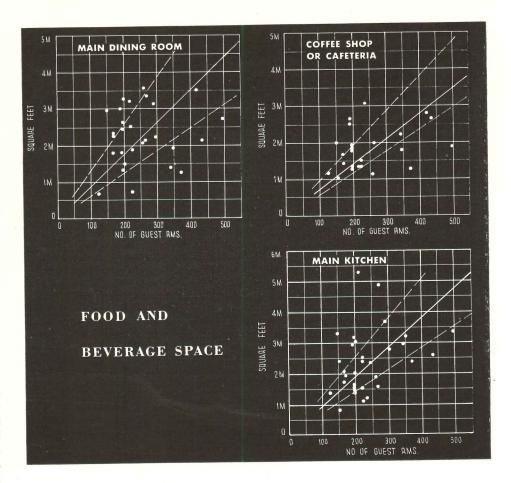

General Service Space

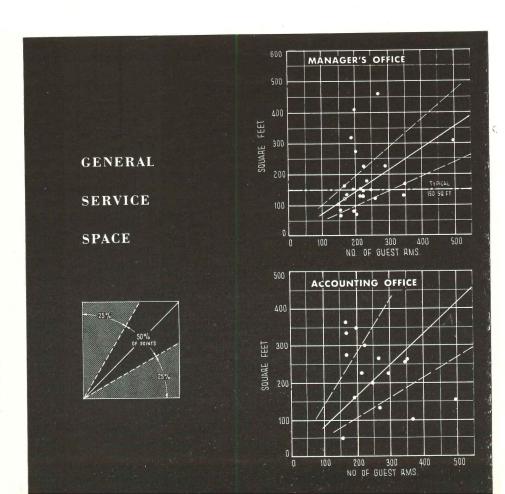

General service space includes the working quarters of the hotel and the administration offices, exclusive of food beverage space. The wide variations in area for the manager's office are not surprising. Possibly the larger offices were due to the insistence of the manager or the generousness of the architect. This office for one individual is typically 150 sq ft, regardless of hotel size. The accounting office can be expected to require more personnel in the larger and more complex hotels than in the smaller ones. It is often omitted from the plans, requiring the management to sacrifice one or two guest rooms for the purpose.

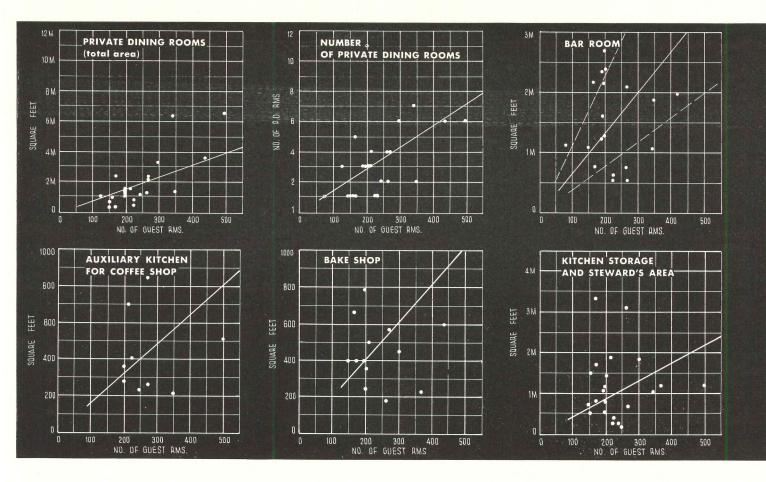

The central linen room was shown on only half the plans studied. Having a central point from which linens are distributed is quite essential in maintaining proper control and in reducing delays.

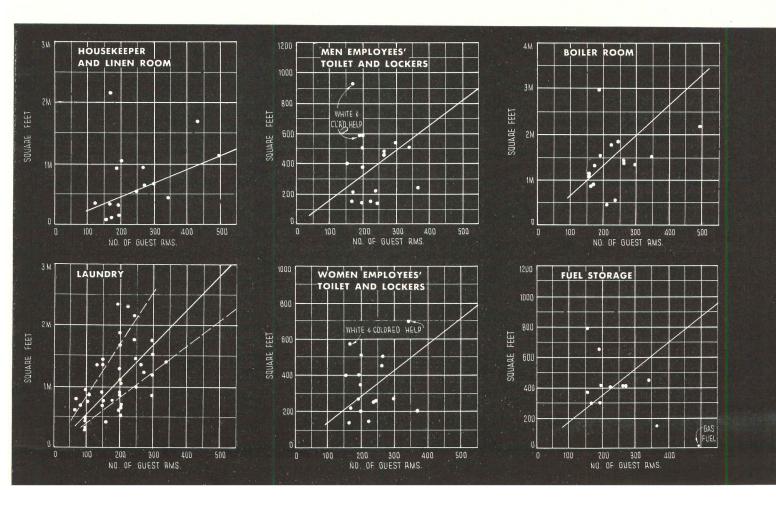

A laundry is customarily installed in larger hotels but not in small ones. Half of the 200-room hotels have their own laundry, according to a survey by the American Hotel Association. Around 5 or 6 sq ft per guest room includes allowance for restaurant linen. For extensive guest laundry work, 7 or 8 sq ft may be needed.

The engineering and maintenance spaces are neglected too often. The following figures commonly apply (per guest room): 6.6 sq ft of boiler room, 1.7 sq ft of fuel storage, (graphs not included for remaining) 1.6 sq ft of carpenter-and-furniture workshop, 3.2 sq ft of machinery (and refrigeration) space, 2.2 sq ft of furniture and trunk storage space, and 1.6 sq ft of basement fan room area. For the last three areas mentioned, actual space used often exceeded that indicated on plans.

A ROOF DECK THE WEATHER WON'T BOTHER

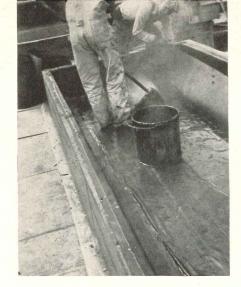

Most roofs are readily accessible if repairs are required. Not so with bituminous roofs laid over concrete slabs and covered with rigid walking decks or roof gardens. Under these surfaces, which may be either concrete, clay tile or other rigid permanent materials, the waterproofing membrane is not only inaccessible but is subject to rupture and ruin if the original installation is not correctly done.

The effect of large temperature changes in expanding and contracting the overlying slab in comparison with the structural slab below is not completely considered in many cases. Costly experience has demonstrated that materials in the surface slabs often bond themselves into the flood-coated membrane below, which in turn has been bonded to the structural slab on which it lies. In consequence, the moving top

slab either carries the membrane with it in places, or drags on it — in either case rupturing it. Rainwater penetrates the joints as they open in cooler, rainy times, and soon a leak shows up in a room below, sometimes far distant from the original point of water penetration at the top surface.

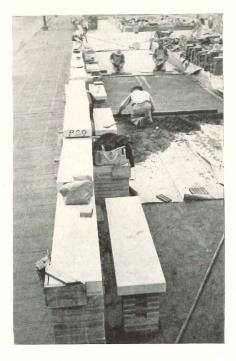

To locate the point of rupture is impossible. Occasionally it is possible to force a cold liquid bitumen onto the membrane below, but the repair is only temporary. Continued movement and the low-temperature hardening of the asphalt or tar opens the cracks, and greater leaks appear. The only remedy is to remove all and start over again, better.

To prevent such trouble in the new stack addition to the Seattle Public Library, a roof deck developed according to the following plan was used. In such a roof, it is necessary to (1) isolate the membrane from the slabs both below and above and (2) strengthen the membrane so that movements of either the top or bottom slab or of the membrane will cause only harmless slippage on surfaces prepared to receive it. First, no bond may exist between the structural slab and the membrane. To guarantee this, the slab should be smooth-troweled as for a finished floor. Second, the slip joint between slab and membrane should consist of at least two slip surfaces, usually created by the laying of a tough dry sheet (such as heavy kraft paper) on the concrete, superimposed by another heavy kraft paper surface. The second layer generally consists of a 20-lb material having kraft paper on one side and prepared roofing on the other. It is laid with the kraft side down and the membrane is mopped to the roofing side, with

Photos here show important construction steps of walking deck and flower beds for roof of Seattle Public Library addition (finished roof deck on opposite page). Architects were John Paul Jones and Leonard W. S. Bindon. The primary waterproofing membrane is carried flat across the entire slab. Then planting bed walls are concreted, and a secondary membrane is laid extending from the top of walls down and across the floor, and up opposite wall (top, left). As a protection to this membrane, wire reinforcement is gunited into place (top, center). Planting bed is drained into sump through gravel (top, right). Membrane must be flashed and clamped to lower drainage pan of floor drain (bottom, left). Mortar bed and quarry tile are placed last (bottom, right)

care being taken not to get asphalt or tar between the kraft layers. At least 2 courses of reinforcement are needed to strengthen the membrane, lapped at least 6 in. to assure continuity of strength. The upper layers of the membrane should be just like the lower two layers, except in reverse — having the kraft surface up, and a kraft sheet above it, over which the wearing surface of tile or concrete is placed.

Floor drains are necessary, both for the surface drainage and for subsurface drainage of the water that may get by the top slab through shrinkage cracks. To these double-drainage-type floor drains, the membrane must be carried and clamped tightly in place. To avoid trouble from ponding and winter freezing of water that may be trapped on an uneven slab below, it is recommended that the structural slab as well as the

surface slab be laid to slope to the drain.

Sealing the base is not complete until a pan is formed by flashing the membrane against the vertical surfaces adjoining. Low sections of dividing walls such as at door openings should have the membrane carried unbroken over them, but where a tile or concrete base is used, the membrane can be carried up behind it and returned, and sealed in reglets cast into the walls. For this sealing purpose, a bituminous mastic should be used.

To avoid tearing or stripping and pulling away of the membrane from the vertical surface, a cold bituminous primer is first applied to the wall. To this the various plies are then bonded using a cold bituminous adhesive. Cold adhesive is used instead of hot mopping in order to create the most flexible bond possible — one which also will permit a

slight movement of the membrane without tearing it from its base surface.

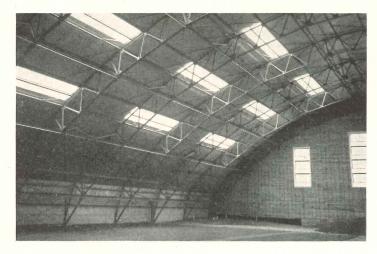

Some architects and applicators may prefer a cold cemented job in its entirety, in which case the membrane is laid using the standard cold-application roof specification. One advantage of this method, seldom considered, is that, using the proper materials, the membrane may be laid in relatively wet weather by (1) keeping all operations closely coupled, by (2) using a wetsurface plastic for the flashing bond to a previously primed surface and (3) by rolling the plies into close contact and simultaneously forcing out any water.

If carefully done, the foregoing should result in a permanently watertight job. If any substantial variation occurs, especially in allowing any bitumen to come between the membrane and the slab, one may expect trouble.

Left: skylights of white, translucent plastic, corrugated to match aluminum sheathing, admit daylight to University of Delaware field house. Above: close-up of plastic and center support

PLASTICS DAYLIGHT A FIELD HOUSE

Large enough to hold baseball and football practice, as well as indoor track events, the new field house of the University of Delaware gets its daylight through 24 skylights of shatter-resistant plastic. The 172-ft-long field house is a war surplus airplane hangar which has been sheathed with corrugated aluminum and glazed with panels of translucent acrylic plastic, corrugated to match the aluminum. The skylights conform to the curvature of the roof, and when viewed from the outside are barely discernible.

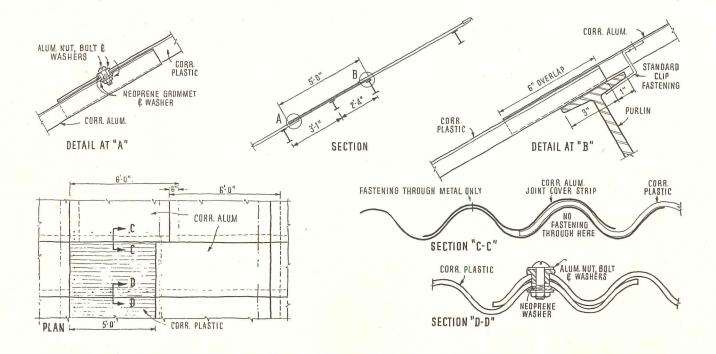

An outstanding advantage of the 18

by 5 ft plastic skylights is ease of installation (see details). The top of each plastic panel runs under the corrugated aluminum, and the bottom extends over the metal. The plastic panels are bolted at the bottom and rest on a structural member at the top, with crosspieces across the center to aid in supporting snow loads. Standard "Z" clips attached to the cross-pieces tie the plastic panels together at the center. This operation is shown in the right-hand photo. Aluminum border strips, bolted to the plastic at each edge, seal the sides. Synthetic rubber washers and

grommets were used in the fastenings to take care of expansion of the plastic sheets.

Cost of erecting the skylights, including material and labor, was \$2 per sq ft. The plastic skylight weighs 70 lb, as compared with 437 lb for glass. Other advantages include light diffusion, helping to minimize glare; freedom from deterioration; and strength to withstand snow loads. The size of the individual plastic sheets is 36 by 60 by 0.125 in.

Architect was E. William Martin, Wilmington, Del.

CONDENSATION CONTROL FOR HOUSES

Vapor Barriers — 1: Floors and Side Walls

The material presented here is abridged from the Housing and Home Finance Agency's publication, Condensation Control, by the U. S. Dept. of Agriculture in collaboration with the HHFA.

Vapor barriers, combined with ventilation and proper insulation help prevent moisture accumulations in dwellings and subsequent damage and rot. They are materials or coatings that check transmission of water vapor. A good vapor barrier, when installed, should have an average vapor transmission rate less than 1.25 grains per sq ft per hr per in. of mercury differential including joints and around openings.

Types

A number of satisfactory materials are available, including asphalt impregnated and coated papers with a glossy or bright finish. Thin, dull-surfaced papers are not as effective. Other good vapor barriers are: duplex papers composed of two sheets of 30-lb kraft paper with a 60-lb per 3000 sq ft asphalt layer between; aluminum foil mounted on a paper support or to the plaster base; and aluminum paint, oil paint or rubber base paint in sufficient coats for a smooth glossy finish. Papers used to support insulating materials which have narrow strips of asphalt as adhesive joints are not usually good vapor barriers. Value should be checked before purchase.

Use of Vapor Barriers

Not all moisture is caused by leaks or infiltration; when surfaces cool below dew point, water condenses in an enclosed space. Condensation control is possible by proper use of vapor barriers, ventilation or both. Ventilation serves to force out vapor laden air. Vapor barriers should form a light, carefully installed envelope near the warm side of the building element in which it is placed, to prevent vapor reaching the cool surfaces. The cold side of a wall should be capable of losing moisture yet resist rain and strong winds. Sheathing or breathing paper, often used between sheathing and siding, should be capable of passing five or more grains of water vapor per sq ft per hr per in. of mer-

cury when tested by a dry method, and be resistant to wetting by free water. Vapor barriers should always be used when outside of walls have low permeability, in northern climates, and where walls contain materials adversely affected by moisture or moisture freezing. Basement walls are often damp from condensation. Little harm is done unless floors and walls are finished with damageable materials.

Concrete Floors Laid on Ground (Fig. 1)

1. Vapor barrier of durable paper or heavy roll roofing between gravel fill and concrete slab checks water seepage.

2. Thermal insulation (waterproofed) $1\frac{1}{2}$ ft wide around perimeter and over edge of floor slab checks condensation on floors cooled by conduction to walls in winter, by breaking continuity of the concrete. Provide recess in gravel fill and around wall for the insulation.

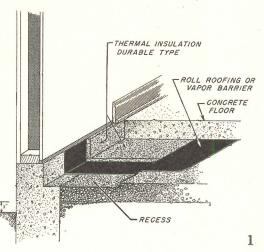

3. Vermiculite in a low density concrete aggregate or thermal insulation below floor prevents condensation caused by heat conduction to soil cooler than air in summer.

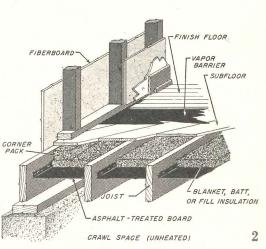

Floors Over Unheated Crawl Spaces (Figs. 2, 3)

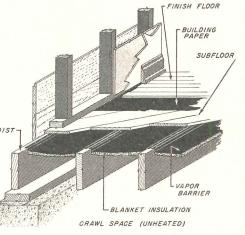

1. Ventilate crawl space with min of 4 vents, placed high near corners of building for free air movement. Net ventilation should equal 2 sq ft per 100 lineal ft of building perimeter plus 1/3 of 1 per cent of crawl space ground area. Total ventilation area = specified net area x factor "A":

Vent Covering Screen all openings for vermin control.	"A"
½-in. mesh hardware cloth	1
Screening, 8 mesh/in.	$1\frac{1}{4}$
Insect screen, 16 mesh/in.	2
Louvers & 1/4-in. mesh hardwa	re
cloth	2
Louvers & screening, 8 mesh/in.	$2\frac{1}{4}$
Louvers & insect screen, 16 mesh/in	n. 3

2. Ground Cover of roll roofing (55 lb per 108 sq ft or heavier) restricts evaporation and reduces need of ventilation to 10 per cent amount indicated

CONDENSATION CONTROL FOR HOUSES

Vapor Barriers — 3: Floors and Side Walls

above. Lap edges at least 2 in. Four in. of gravel (½ in. diam or larger) may be used but requires more ventilation.

3. Drainage, preferably underground, is necessary on sloping sites. Soil surface below building should be above grade if there is a chance water might get inside foundation wall on level sites.

4. Vapor barrier is not required in floor if lower (cold) side is permeable. It is recommended, however, between finish and sub floors to prevent possible buckling from dampness in crawl space.

5. Insulate floors and pipes so vents can be left open all year, if necessary for condensation control. Some blanket insulations are made with good quality vapor barriers; when used, place building paper (or vapor barriers if desired) between finish and sub floors. Low surface temperature of reflective insulation necessitates use of vapor barrier. Allow min of 3/4-in. air space between such insulation and adjacent surfaces. It is not practical to seal joints of asphalttreated board supports for insulation, therefore use of a vapor barrier is indicated. Where corner packs are used along outside joists, crawl space must be well vented and ground covers used in wet locations.

Basement Floors (Fig. 4)

- 1. Vapor barrier below finish floor prevents entry of water into space between concrete and finish floor.
- 2. Membrane waterproofing is recommended over concrete sub floors.
- 3. Gravel should be placed below concrete for drainage.

Basement Walls (Fig. 5)

- 1. Vapor barrier placed behind surface, parallel to furring strips and lapped only over solid supports, prevents accumulation of free water behind finish surface.
- 2. Insulation is not essential, but will keep finish at a higher temperature,

lower moisture content, and keep basement warm in winter. Allow air space between wall and insulation.

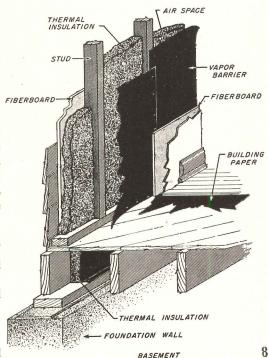

- 3. Drain tiles are recommended near footings in wet soils as well as water-proofing coating on outside of wall.
- 4. Asphalt paint is recommended on FIBERBOARD inside of masonry wall.
- 5. Furring Strips should be of durable wood or treated with preservative. Strips at top, bottom, and around openings should be continuous to form a good seal. Both wall finish and furring strips should be kept ½-in. above concrete floor.

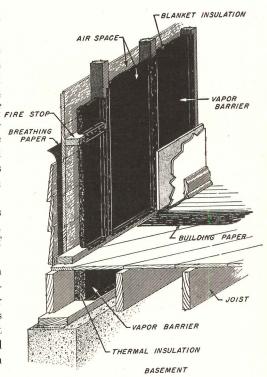

Floors Over Basements (Fig. 6)

- 1. Vapor barriers should be placed over insulation above foundation wall.
- 2. Building paper should be placed between finish and sub floors.

Side Walls (Figs. 7, 8, 9)

- 1. Vapor barriers should be placed over inside (warm) face of studs and run vertically through full story height, lapping only over studs. Fit closely around all openings and partitions.
- 2. Insulation is best placed on the warm side of wall, as water will be dispersed more readily than if placed against sheathing. Air space should be left on one or both sides of insulation if possible. If blanket insulation with vapor barrier is used, thoroughly close openings at top and bottom of stud spaces or other horizontal obstructions such as fire stops. Reflective insulation requires a separate vapor barrier.
- 3. Ventilation in cold cavities of walls is effective if opened to the outside. Use 1-in. of opening per running ft of wall, at both top and bottom.
- 4. Brick Walls over crawl spaces, with vapor barriers, require a horizontal furring strip fixed tightly to the brick over joists or above sub floor. Fill any gaps with caulking compound to prevent migration of water vapor from crawl space to attic. Allow air space between insulation and brick.

HARDWARE-7: Hinges

By Seymour Howard, Architect, with the cooperation of American Society of Architectural Hardware Consultants

(Continued on page 143)

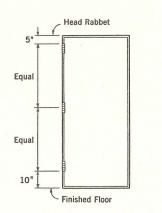

NUMBER OF HINGES PER DOOR VARIES WITH HEIGHT OF DOOR

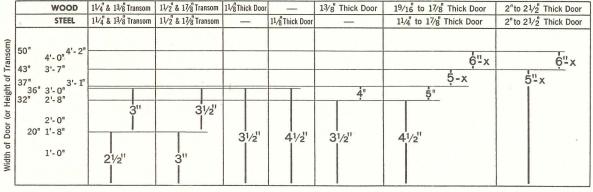

HOW TO SPECIFY HINGES

Number (in Pairs) – Either Ball or Oilite Bearings (if Required) – Type of Tips – Type of Screws – Type of Hinge – Metal Height – Width (Required Only for Full Mortise Hinges) – Weight (Regular or Heavy) – Finish

TEMPLATE HINGES are Made to Standard, Templates or Patterns (Usually in Accordance with Government Standards) to Insure Exact Matching of Hinge and its Screw Holes with Metal Doors and Metal Jambs Fabricated by Other Manufacturers

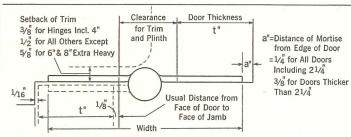

LOCATION OF HINGES

HEIGHT (LENGTH) OF EACH HINGE - Varies with Width, Thickness and Material - (Note: - x Means Extra Heavy)
FOR HIGH FREQUENCY DOORS,
USE EXTRA-HEAVY HINGES

Note: Doors of Wrought Bronze, Since They Weigh About 50% More Than
Steel, Always Require Extra-Heavy Hinges

WIDTH OF FULL MORTISE BUTT HINGE

Width = 2t" - 2a" + Clearance + 1/8" = Usually = 2t" + Clearance - 3/8" Conversely: Clearance = Hinge Width - 2t" + 3/8"

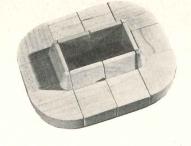

CLEARANCES WITH OTHER TYPES OF HINGES						
Length of Hinge	Half Surface	Full Surface	Full Surface	Half Mortise		
3"	1"	(Kalamein & Angle	(Tubular Steel			
31/2"	11/4"	Iron Doors)	Doors)			
4"	11/4"					
41/2"	13/8"	13/4"		13/4"		
41/2" Extra Heavy	17/8"	17/8"	7/8"	17/8"		
5"	17/8"	17/8"		17/8"		
5" Extra Heavy	17/8"	17/8"	7/8"	17/8"		
6" Extra Heavy	21/8"	21/8"	7/8"	21/8"		

FREQUENCY OF OPERATION OF DOORS

DAILY ANDULALLY

HIGH EDECITEMON

HIGH FREQUENCY	DAILY	ANNUALLY
Large Department Store Entrance	5,000	1,500,000
Large Office Building Entrance	4,000	1,200,000
Theater Entrance	1,000	450,000
Schoolhouse Entrance	1,250	225,000
Schoolhouse Toilet Door	1,250	225,000
Store or Bank Entrance	500	150,000
Office Building Toilet Door	400	118,000
LOW FREQUENCY		
Schoolhouse Corridor Door	80	15,000
Office Building Corridor Door	75	22,000
Store Toilet Door	60	18,000
Dwelling House Entrance	40	15,000
Dwelling House Toilet Door	25	9,000
Dwelling House Corridor Door	10	3,600
Dwelling House Closet Door	6	2,200

A new series of modular seating units is shown above in a few of many possible combinations. Backed and unbacked ottomans, corner units and wedges group to form sofas, benches, etc., for large rooms. Scale models (above left) are used to plan arrangement of seats

PRODUCTS for Better Building

Modular Seating Units

The Nuclear Series of 20 basic seating units has been designed by Harvey Probber to create custom-tailored architectural effects. Units are varying sized components of squares and circles; curved sections are made concave or convex. Uniform 27 in. height and 30 in. depth allows each piece to fit with others, to be used singly or combined permanently in large seating surfaces.

Frames are made of selected hardwood; fillings are foam rubber, mounted on coil springs. Legs are 4 in. plated brass rods, recessed several inches from the front. An adjusting device allows legs to be raised or lowered to make up for any unevenness in the floor. They may also be fitted with rubber set glides or ball-bearing casters. Various tweedy-type materials are used for upholstering: denims, herringbone tweeds, covert cloth, linen and leather, etc.

Though especially designed for large public areas, the units are adaptable for sofa-bed and couch groupings in residences. Harvey Probber, Inc., 136 Fifth Ave., New York, N. Y.

Plastic Laminates

Parkwood Decorative, a permanently finished laminated plastic material is now on the market for such uses as table tops, counters, furniture and other interior surfaces. Finishes include wood veneers, Pebble-Tex and Star Dust color patterns. The latter are three dimensional patterns, offered in a choice of several colors. Special veneers, colors and inlaid designs are also available.

Two other plastic laminates are available from the same manufacturer: $Parkwood\ Hi\text{-}Den$, said to be a tough, dense,

moisture-resistant, impregnated laminate for machinery parts; and *Parkwood Honeycomb*, an impregnated paper core for use between structural sheets to form lightweight panels. Parkwood Corp., Dept. 10, 34 Water St., Wakefield, Mass.

Odorless Paint

The new Keystone One Coat Flat Oil Paint is reported to be free of any obnoxious paint fumes. This quality is made possible by the use of an odorless solvent developed by the petroleum industry, and a binder rendered odorless by Keystone through a secret process. These replace the customary turpentine and linseed oil. No deodorant or perfume to mask fumes is said to be used.

Increased efficiency in application is claimed for the paint, with a substantial saving in revenue to concerns which derive an income from the premises, as rooms may be occupied following completion. Keystone Paint and Varnish Co., 71 Otsego St., Brooklyn, N. Y.

Gas Gravity Furnace

The Type 111 updraft gas gravity furnace is announced for the low cost housing market. The unit is compactly sized: 25½ in. wide, 51 in. high, and 26½ in. deep. Features include a heavy, welded steel heat exchanger with a square radiator connected to eliminate expansion strain and noise; free-floating corner baffles to create a whirling action and provide greater heat extraction; and circular cast-iron burner with manifold and controls external and adjacent to the unit. A solid base with leveling screws eliminates the need of a concrete setting or grouting. The unit is shipped

pre-assembled in two packages — one with burner and trim and the other with heat exchanger and casing. L. J. Mueller Furnace Co., 2005 W. Oklahoma Ave., Milwaukee 15, Wis.

New Planning Service

A Construction Service Department has been created by Hart & Hegeman to provide technical information on the use, specification, performance or availability of wiring devices. The service is available at no obligation to architects, electrical engineers and contractors. A field service staff of experts on wiring devices has been located throughout the U. S. for help with problems involving H & H products. Hart & Hegeman Div., The Arrow-Hart & Hegeman Electric Co., Hartford 6, Conn.

Cockpit Elevator

Elevators in the new Jordan Marsh store in Boston, Mass., have private cockpits for the operators to provide safer, more efficient service. Floors of these compartments are 1 ft. above the passenger level, giving the operator an unobstructed view of the elevator entrance. Space behind the operator is closed off, allowing passengers to move directly forward when getting off, instead of working their way from behind the operator. Westinghouse Electric Corp., 306 Fourth Ave., Pittsburgh 30, Pa.

Humidity Control

The Niagara Controlled Humidity Method is a system of air conditioning employing Hygrol, a hygroscopic chemical, to control relative humidity. Reportedly, the unit can provide dry air at (Continued on page 186) TECHNICAL NEWS AND RESEARCH

MANUFACTURERS' LITERATURE

Aluminum Windows

Specifications — Aluminum Windows. Presents a short form and a master specification for general requirements of aluminum windows. The latter includes materials, construction, protective coating, finish, air infiltration, fixed windows, screens, drawings, erection, caulking, glazing and cleaning after erection.

A second section gives specific requirements for double-hung, casement, and projected type windows for various structures. Features of aluminum windows are noted. 16 pp., illus. Aluminum Window Mfgs. Assoc., 209 Cedar Ave., Takoma Park, Washington 12, D. C.*

Rolling Doors

Cornell Rolling Doors (Catalog No. Z-27). Describes steel fire doors, service doors, shutters, grilles, enclosures for moving stairways, and wood doors. Specifications, details and tables of dimensions and clearances are included for all the above. Other types of Cornell doors are noted. 12 pp., illus. Cornell Iron Works, Inc., 36th Ave. & 13th St., Long Island City 6, N. Y.*

Copper Roofing

Master Specifications for Copper Roofing and Sheet Metal Work in Building Construction (Specification 100). Covers the following classifications: flat seam, standing seam and batten seam roofing; flashings; gutters and leaders; leader heads and straps; splash pans; cornices and belt courses; building expansion joints; coping covers; louvers; scuttles and eave snow flashings. 23 pp. Revere Copper and Brass Inc., 230 Park Ave., New York 17, N. Y.*

Heating Equipment

Coleman Advanced Automatic Heating Equipment for Low Cost Homes (Form A645B). Discusses line of oil or gas furnaces, floor furnaces, wall heaters and water heaters. Data includes specifications, construction details, operation diagrams, controls, crowns, adapters and notes on location. 20 pp., illus. The Coleman Co., Inc., Wichita 1, Kansas.

*Other product information in Sweet's File, 1950.

Mahogany

For American Industry — Philippine Mahogany. Folder pictures uses of mahogany in homes, commercial installations and furniture. Color photographs show 24 finishes possible with the wood. An enclosed insert gives formulas for producing these finishes. 8 pp., illus. The Philippine Mahogany Assn., 111 W. 7th St., Los Angeles 14, Calif.

Cooling Towers

Binks Type E Series Induced Draft Cooling Towers (Bulletin 42). Presents design features and operation of a compact induced draft cooling tower for use with packaged, water-cooled air conditioning and refrigeration condensing units. Specifications, size and weight tables, performance data are given, with a typical installation diagram. A cooling tower and pump selection table is included. 4 pp., illus. Binks Manufacturing Co., 3114-40 Carroll Ave., Chicago 12, Ill.

Aluminum Roofing and Siding

Alcoa Aluminum Industrial Roofing and Siding. Booklet discusses qualities of the material and gives dimension, coverage and load tables. Details show a variety of fasteners and flashings. Sketches accompany recommended application procedure and suggested specifications. 17 pp., illus. Aluminum Co. of America, Pittsburgh 19, Pa.*

Tramrail Systems

Typical Tramrail Specification File For Architects and Engineers. A set of sample specifications, to be modified to meet particular conditions, on tramrail design and operation. It covers tracks, runways, track fittings, shielded electrification, switches, bridge cranes, push trolleys, motor driven trolleys, push cranes, transfer bridges and superstructure. 10 pp. The Forker Corp., 2044 Random Road, Cleveland 6, Ohio.

Dumbwaiters

Otis Low-Rise Electric Dumbwaiters. Gives description, drawings and photo-

graphs of the dumbwaiter and its equipment. Uses and typical installations are pictured for counter level or undercounter arrangements. Layout data, installation notes, specifications, details, and width and depth tables are included. 8 pp., illus. Otis Elevator Co., 260 11th Ave., New York 1, N. Y.*

Air Conditioner

Servel All-Year Air Conditioner. Booklet discusses features and functions of the unit, with diagrams showing how it works. Pictures of the parts, and descriptions of the heating and cooling cycles and the control system are given along with drawings, specifications and installation data. Drawings and data for evaporative water coolers are also included. 8 pp., illus. Servel Inc., 119 N. Morton Ave., Evansville 20, Ind.*

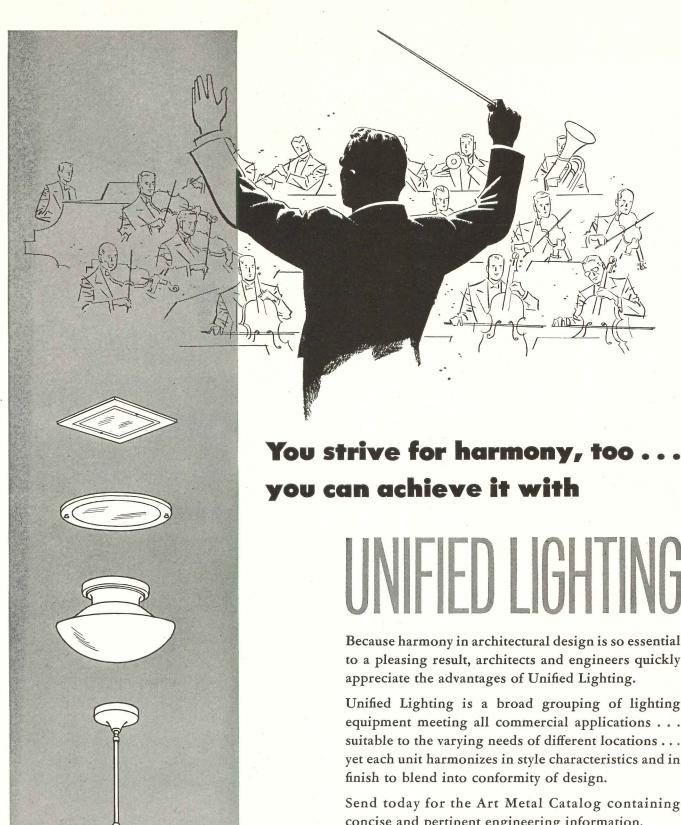

Power Cables

Selection of Proper Cable Sizes (Publication No. 19-269). Booklet presents a method of selecting the proper conductor size for heat-resistant types of wire and cable. Step-by-step instruction is given on figuring load current, voltage drop, cables, and cable sizes for both lighting and motor loads. Tables are included for these computations, for voltage and temperature classification of insulating materials, and for wire gages, dimensions and copper weights. 10 pp. General Electric Co., Construction Materials Dept., Bridgeport, Conn.*

Pressure Systems

Hydro-Pneumatic Pressure Systems (Bulletin B-579). Explains how to select equipment for hydro-pneumatic pressure systems. Four main chapters cover general description, pump and tank capacities and pressures, hydro-pneumatic system components, and pressure system auxiliary equipment. Many charts, graphs, tables and diagrammatic drawings amplify the text. 30 pp., illus. Peerless Pump Div., Food Machinery and Chemical Corp., 301 W. Ave. 26, Los Angeles 31, Calif.

Note: Above sizes are based on height (same as length) of hinge. Full mortise butt hinges are usually made of same width as their height (e.g.: 4½ by 4½ in., 6 by 6 in.), but are available in other widths. When clearance for trim (see Hinges, Sheet 7) make these widths unsuitable (e.g.: trim very nar-

row or omitted, or very wide plinth or trim), specify width desired, to nearest larger ½ in. dimension, and manufacturer will be able to furnish. Half surface, full surface and half mortise hinge widths are not variable.

METALS AND FINISHES USED	NOTES
Recommended For Interior Doors: Wrought steel, highly polished & heavily plated Wrought steel, polished & plated Wrought steel, planished & plated Wrought steel, primed for painting Cast iron (sometimes malleable iron)	Note: All wrought steel hinges may have plain, ball or oilite bearing Very accurately made; heavy copper plating before finish plating Finish plating directly on polished steel Finish plating directly on cold rolled steel Inner edges of leaves cut back for paint clearance around knuckles Free graphite in iron helps lubricate bearing
Recommended For Exterior and Interior Doors: Wrought or cast brass or bronze Wrought or cast white bronze Wrought aluminum Wrought stainless steel Wrought monel metal	Should have either ball or oilite bearings; also stainless steel pin Ditto Ditto May have either ball or oilite bearings; also stainless steel pin Ditto

BALL BEARINGS and OILITE BEARINGS are regularly permanently fitted to knuckles to prevent accidental detachment and loss. Ball bearings are of hardened carbon steel; may be of stainless steel. Oilite is a powder metallurgy product: an alloy of 85 per cent copper, 10 per cent tin, 5 per cent graphite

(typical composition), of porous or sponge-like structure, containing lubricating oil within its pores. Depending on manufacturer, bearings may be either externally visible or concealed within knuckles (see drawings of hinge types).

PINS are usually of hardened carbon steel; may be of stainless steel. "Removable" pins should be designed to be nonrising. "Non-removable" pins may be held by set screw in

barrel to permit removal; or they may be "fast" pins, riveted, driven in, spun or welded at both ends. Fast pins make hanging of door more difficult. Types of tips available:

HOSPITAL TIP ("FAST" PIN)

Available from All Manufacturers as Alternate to Ball or Button Tips; Used in Hospitals and Other Institutions for Added Safety and Cleanliness

For "Removable" Pins (or "Non-Removable" with Set Screw)

The U. S. Air Force is **TOUGH** on an Enemy in the Air...

and ROUGH This beautiful officer's club at Ellington Field, near Houston, Texas, is a "pace setter" for officer's clubs throughout the nation. The swank Congo Bar shown here is one of several luxurious rooms in the club featuring WRIGHT RUBBER TILE.

on Officer's Club Flooring!

Selecting the right flooring for an officer's club is a special challenge. The requirements are high—and architects know it. That is why time and again, they specify WRIGHT RUBBER TILE for the "tough" jobs.

They know that an officer's club floor must be beautiful. It must be comfortable and able to withstand damage from spilled drinks, cigarette butts and frequent re-arrangement of heavy furniture. It must be in good, pleasing taste, quiet, and unbelievably durable. WRIGHT RUBBER TILE, the nation's first rubber tile floor covering, meets all these requirements.

Non-porosity gives WRIGHT RUBBER TILE a resistance to damage unequalled by any other floor covering, as well as unparalleled beauty and long life.

No wonder Ellington Field officers chose Wright, the oldest and best known rubber tile in existence.

A floor covering that meets the requirements of an officer's club will be ideal for any room where luxury and resistance to hard wear and damage are paramount. That's why architects everywhere are consistently specifying Wright Rubber Tile for every job.

Write us for the new booklet for architects—giving full specifications of WRIGHT RUBBER TILE

COMPETITIONS

Welded Bridges Theme for 1950 Lincoln Competition

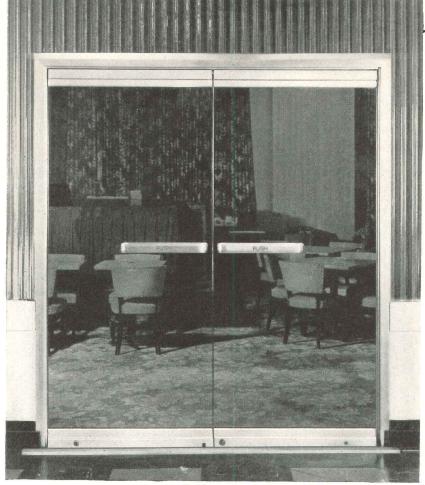

"Welded Bridges of the Future" is the 1950 Award Program of the James F. Lincoln Arc Welding Foundation. Its objective is "to stimulate original and creative thinking on the design of bridges."

The competition, which carries awards totaling \$10,750, is open to all persons who consider themselves qualified. Each participant must present an original, all-welded design for a two-lane through highway bridge with a span of 250 ft. All exhibits must have been completely executed between Nov. 1, 1949 and June 30, 1950, when the competition closes.

In rating the merits of exhibits, the Jury of Award will consider five factors: compliance with competition specifications; ingenuity in developing shapes, arrangement of individual members, sections and connections that can readily be assembled and welded in both shop fabrication and field erection, with due regard to methods possible in existing and future fabricating shops; the cost, including maintenance; probable life; the appearance of the bridge.

PITTSBURGH PLATE GLASS COMPANY

"the doorway
that has
everything!"

A^{LL} you have to do is indicate the style number and size frame you need (there are twelve standard designs to choose from). And when it reaches the job - complete in one "package"-it's only necessary to unpack the frame, bolt it into the building opening and hang the Herculite Doors, for which the frames have been especially engineered. All work can be done with the least possible interference with traffic into and out of the building. Every step in the construction of these frames is marked by precisionfabrication. Expert craftsmen use special checking gauges to assure absolute accuracy of all dimensions. All this means that Pittsburgh Doorways offer not only important advantages, but definite savings as well—in time-consuming calculations, in details of setting and fitting, in assembly labor. But this is just a small part of the story. Get full details by filling in and returning the convenient coupon below.

COMPACT, EFFICIENT, laboratory-tested Pittco Checking Floor Hinge. Especially developed for Pittsburgh Doorways. Has built-in door holder, positive door-speed control, separate checking control. Is sealed in oil for life.

Skylines... (4) Chies

Toronto, which began as a wooden stockade on a site known to the Indians as the "place of meetings", has grown to be Canada's commercial and financial capital and a great educational and cultural city. The home of Toronto University, it supports two symphony orchestra organizations and stages the annual Canadian National Exhibition which is the industrial show window of Canada. Toronto's skyline, which includes the tallest skyscraper in the British Empire, is served by 3,724 elevator installations — of which 2,174 are by Otis.

STAIRWAY TO THE STARS.

Loge and balcony seats are as popular as those in the orchestra in the new \$2,000,000 Skouras Calderone Theatre in Hempstead, Long Island, N. Y. They're just as easy to reach.

It doesn't take a bit of effort or exertion to travel from the lobby to the mezzanine on the Escalator.

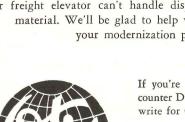

THIS IS HOW IT'S DONE.

You've probably noticed that aisles in well-managed stores are free of cartons and crates. And you always have a full selection of everything. It's done very simply with an Otis Undercounter Dumbwaiter.

SHE WON'T GO IN!

Hotel managers! Don't let lucrative convention business pass you by — because your freight elevator can't handle display material. We'll be glad to help with your modernization plan.

If you're interested in knowing more about Undercounter Dumbwaiters for stores, restaurants, clubs, etc., write for Otis Booklet A-380-S.

Home Office: 260 11th Ave., New York 1, N. Y.

THE RECORD REPORTS

(Continued from page 146)

Awards will be made as follows: First Award, \$5000; Second Award, \$2500; Third Award, \$1250; 10 Honorable Mentions, \$200 each.

The 1950 Program is dedicated to Wilbur M. Wilson, Research Professor of Structural Engineering Emeritus, University of Illinois.

Mr. Wilson is honorary chairman of both the Rules Committee and the Jury of Award, which is to include at least five members of the Rules Committee.

Chairman of the Rules Committee is Prof. James G. Clark of the Department of Civil Engineering, University of Illinois.

Other members of the Rules Committee are: Prof. E. E. Dreese, Dept. of Civil Engineering, Ohio State University; Raymond Archibald, chairman, AASHO Bridge Comm., U. S. Bureau of Public Roads; Harry C. Boardman, director of research, Chicago Bridge and Iron Co.; Shortridge Hardesty, consulting engineer, Hardesty and Hanover, New York City; Lee E. Philbrook, asst. bridge engineer, Illinois State Div. of Highways; Prof. Frank W. Stubbs Jr., School of Civil Engineering and Engineering Mechanics, Purdue University.

Prospective participants may obtain complete information by addressing: The Secretary, The James F. Lincoln Arc Welding Foundation, P.O. Box 5728, Cleveland 1, Ohio.

Allied Arts Building

"An Allied Arts Building" is the subject for the 20th annual competition conducted by the Brooklyn Chapter of the American Institute of Architects. March 14 is the deadline for entries.

The competition is open to all students who have legal residence in the Chapter's territorial area (Brooklyn, Queens, Nassau, Suffolk) and who attend architectural schools anywhere in the United States, and to architectural draftsmen employed in or living in the territorial

Three prizes — \$100, \$50, and \$25 — will be awarded, and winning designs will receive public recognition.

Programs and details may be obtained from Vito P. Battista, chairman of the Committee on Education, Brooklyn Chapter, A.I.A., 26 Court St., Brooklyn, N. Y.

(Continued on page 150)

Streaming off this continuous processing machine at the Ford Motor Company... are Kodagraph Autopositive prints—positive

photographic intermediates of original drawings. The answer to a \$75,000 per year redrafting headache!

Before . . . Ford's valuable original drawings had a short life . . . had to do double duty in the drafting room and in heavy print production. In the latter operation, they were exposed to machine wear and tear, constant handling. Soon they lost their detail . . . produced illegible blueprints . . . which meant that new drawings had to be ordered from the drafting room.

Now . . . Ford's originals are filed away in the drafting room after Kodagraph Autopositive intermediates are made—available for reference and revisions only! All blueprints are produced from the "Autopositives," whose photographic black lines will not smudge or lose opacity . . . assuring highly legible prints even after hundreds of "run throughs." As a result of this simple change in routine, redrafting costs are reduced by an estimated \$75,000 per year . . . while the output of creative drafting is increased. And print production is simplified, too . . . for Kodagraph Autopositives are not only longer-lasting . . . but can be printed at uniform, practical machine speeds.

Kodagraph Autopositive Paper

"The Big New Plus" in engineering drawing reproduction

You, too, can cut your drafting costs, get improved legibility, and simplify print production . . . by reproducing your drawings on this new, low-cost photographic intermediate paper.

You can turn out "Autopositives" quickly, economically . . . with your present print-making equipment and standard photographic processing. Or else you can order them from your local blueprinter. It will pay you to get all the facts soon!

How To Apply Glazing Material to save time and money

Iron Clad Rules

- 1. Have dust and dirt removed from sash.
- 2. Be sure the sash is dry.
- 3. Wood sash must be primed. Metal sash must be free from rust.
- 4. See that clips are suitably installed.
- 5. Avoid using thinners excessively.
- 6. Use your glazing material fresh from the manufacturer and be sure it is mixed with all the oil.
- 7. Protect your lights from condensation until glazing material is set and painted.
- 8. Do not let sash frames be jarred or handled until glazing material has set.
- 9. After putty is set (about 14 days) always have it painted immediately! We recommend painting compounds, too.

THE RECORD REPORTS

LeBrun Scholarship

Opening of the 23rd annual LeBrun Traveling Scholarship, a national competition offered by the New York Chapter of the American Institute of Architects, has been announced by Robert I. Carson, chairman of the chapter's Committee on LeBrun Scholarship.

Design of a suburban railway station is this year's competition subject. First prize is \$2800, which must be used for travel and the study of architecture outside the continental United States for a period of at least six months.

Applicants must be nominated before February 10 by an A.I.A. member who will certify that the applicant meets competition requirements. These requirements are: U.S. citizenship and residence; age 23 to 33; at least two years' practical experience as architect or architectural draftsman. In addition, the applicant must never have been the beneficiary of any other traveling scholarship.

The first scholarship was awarded in 1912, under the terms of a deed of gift from Pierre LeBrun to the New York Chapter.

Further details may be obtained from the LeBrun Scholarship Commitee, New York Chapter, A.I.A., 115 E. 40th St., New York, N. Y.

ELECTIONS APPOINTMENTS

- Brig.-Gen. John S. Bragdon has been designated Deputy Chief of Engineers, Department of the Army, according to an announcement by Maj.-Gen. Lewis A. Pick, Chief of Engineers.
- John G. Bergdoll Jr., vice president and general works manager of York Corp., York, Pa., has been elected president for 1950 of the American Society of Refrigerating Engineers. Other officers for this year are: Paul B. Christensen, Merchants Refrigerating Co., New York City, and Edward Simons, consulting engineer, San Francisco, vice presidents; R. C. Jordan, professor of mechanical engineering, University of Minnesota, treasurer.
- Dr. George G. Brown, chairman of the Department of Chemical and Metallurgical Engineering at the University of Michigan, has been named director of

AT THE COLLEGES

Colorado Adds Five-Year Architecture Curriculum

A five-year curriculum leading to the degree, Bachelor of Science in Architecture, will be offered by the Department of Civil and Architectural Engineering of the University of Colorado beginning next September.

This course of study will be in addition to that in Architectural Engineering which was established 25 years ago and which has at present about 250 students.

The new curriculum will include five years of architectural design. It will also emphasize structure, Department Head Warren Raeder reports, "since we feel that the boldness of modern design requires an appreciation of both the esthetic and engineering."

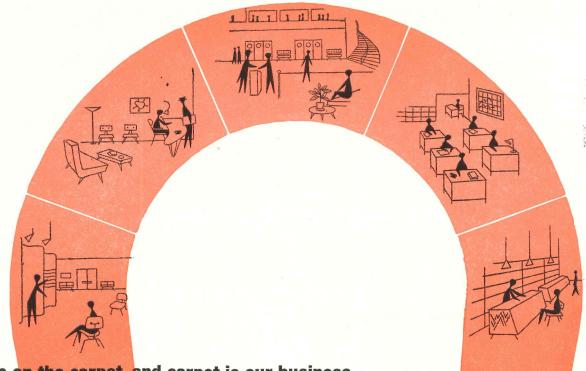

Institute of Design Becomes Department of Illinois Tech

The Institute of Design at 632 North Dearborn St., Chicago, is now the department of design of Illinois Institute of Technology.

The design department will continue the Institute of Design curricula in industrial design and visual communications, and architectural students will be permitted to transfer to Illinois Tech's department of architecture, which will have the only course in architecture of the two former institutions.

Serge Chermayeff, president of the Institute of Design, is now director of the new design department. Ludwig Mies van der Rohe, director of Illinois

Tech's department of architecture, continues in that position.

For the present the new design department will operate at its near north side location. Later it will be moved to the growing Technology campus on the central south side.

Opened in 1937, the Institute of Design was founded by Lazlo Moholy, who continued as its Director till his death in 1946.

Harley, Ellington and Day Give Michigan Scholarship

A scholarship of \$1000 to be awarded each Spring for the next five years has been established at the College of Architecture and Design, University of Michigan, by Harley, Ellington and Day, architects and engineers, of Detroit.

The "Harley, Ellington and Day Scholarship," which will be awarded this Spring for the first time, will go to an upper junior student in architecture about to enter the two senior semesters in architectural design.

The recipient will be named by the faculty for "marked ability and promise." The scholarship will not be considered a loan, nor will it be given because of financial difficulties. Its purpose, according to the announcement from the College, is "to assist an outstanding senior student to reach a higher degree of attainment than might otherwise be possible."

Faculty Appointments

• William Wilson Wurster, nationally known California architect and Dean of the School of Architecture and Planning at the Massachusetts Institute of Technology, has accepted appointment as dean of the School of Architecture and professor of architecture on the Berkeley campus of the University of California. The appointment is effective next year.

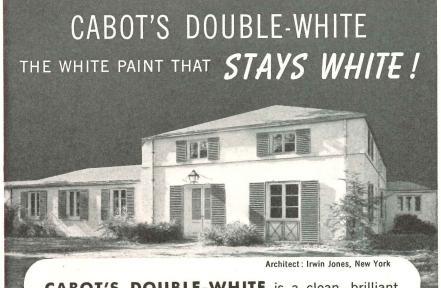

Dean Wurster, who has been with M.I.T. since 1944, is an active member of the architectural firm of Wurster, Bernardi and Emmons in San Francisco. He is also, by Presidential appointment, chairman of the National Capital Park and Planning Commission of Washington, D. C.

One of the better-known of American architects, Wurster has designed several hundred houses in the Bay Region, in the Central Valley, Santa Cruz and on the Monterey Peninsula; but he has achieved distinction in other fields of architectural design as well.

Among his outstanding works have been Valencia Gardens Housing Project for the San Francisco Housing Authority, in association with Harry A. Thomsen Jr.; the Yerba Buena Club on Treasure Island during the 1939 San Francisco Exposition; and, in association with Corbett and MacMurray of New York, Stern Hall, women's residence hall on the Berkeley campus. Valencia Gardens Housing Project and the Schuckl and Co. office building at Sunnyvale, Calif., were chosen by the Museum of Modern Art as examples of significant American buildings of the past decade.

Wurster, a native of California and a graduate (1919) of the University of California, established his firm in San Francisco in 1926, after working for a time for Delano and Aldrich in New York.

T's an automatic fireman who goes on the job at the flip of a switch for the Sanatex Company of Chicago. It cuts operational and maintenance expense to the bone and solves what had appeared to be an expensive heating problem for this processor of wiping cloths.

Not only is an attendant unnecessary—boiler-room and ductwork expense was eliminated, too, by installation of a Dravo Counterflo Heater. Centered along the east wall, the Dravo Counterflo Heater is entirely self-contained—requiring only power and fuel lines and a small vent stack. Its 1,000,000 BTU output is directed slightly over the heads of the workers to blanket 10,000 square feet of unbroken plant area with draft-free warm air. Cold corners and excessive roof heat loss are eliminated. During summer months, a touch of the selector switch converts the Dravo Counterflo Heater immediately into a powerful air-circulating unit.

Dravo Counterflo Heaters are available in sizes ranging from 400,000 to 2,000,000 BTU output. Equally efficient with oil or gas and with or without ductwork, they can be floor-installed, wall-hung or roof-hung. Write for Bulletin HV-516. Heating Section, Dravo Corporation, Dravo Building, Pittsburgh 22, Pennsylvania.

According to Mr. Schulman, President of Sanatex Company, the Dravo Counterflo Heater "is the best equipment we ever had. Delivery of heat is virtually instantaneous when the unit goes into action—an important fuel-saving feature which eliminates the need for anticipating cold spells or keeping the heater in operation when the plant is closed."

Dravo also manufactures the DRAVO CRANE CAB COOLER for air conditioning hot-metal crane cabs

THE RECORD REPORTS

(Continued from page 154)

Dean Wurster will replace Prof. Warren C. Perry at California. Professor Perry resigned as dean last June, but will continue as a professor in the school of architecture.

- Ralph W. Fox, 37, has been named assistant chairman of the applied mechanics department of Armour Research Foundation of Illinois Institute of Technology. Fox has been a research engineer in the department for two and a half years.
- Several recent appointments to the teaching staff of the department of architecture of the University of Illinois have included: William S. Kinne Jr., professor of architecture; Gabriel Guevrekian, professor of architecture; Henry C. Edwards, instructor; James A. Prestridge Jr., assistant professor.

The university has inaugurated a new program of bringing outstanding practitioners as visiting critics in advanced design to live on the campus for six-week periods. Participants this year will include L. Morgan Yost of Kenilworth, Ill.; William T. Priestley Jr., Chicago; Karl Kamrath, Houston; Igor Polevitsky, Miami; Max O. Urbahn, New York.

Special Courses

- Harold R. Sleeper, A.I.A., is giving a course of 10 weekly lectures for prospective home owners at Columbia University. Entitled "A Practical Course for Home Builders and Buyers," the course seeks practical answers to the would-be home owner's problems in terms of today's conditions and costs.
- Elementary and Advanced Architectural Theory and Design is among the subjects listed by the New York State Institute of Applied Arts and Sciences for the Spring Semester of the Evening Extension Division. New courses in the structural field will include Real Estate Practice and Procedure, Building Codes, Estimating, and Structural Theory and Design. Among the subjects being continued are: Construction Laboratory, Plan Reading and Quantity Takeoff, and Structural Detailing.
- A Studytour to selected urban areas in the United States is being planned for professional people, teachers and students in related fields of urban planning,

Recent Improvements by American

ADD EXTRA EASE EXTRA SAFETY

To Sterilizer Operation

Tell your hospital clients about this! It means added convenience—and extra protection—in their sterilizer rooms.

Welded, forged end rings of solid Monel® are now standard on all 16" and 20" cylindrical pressure-type units made by AMERICAN STERILIZER COMPANY.

NO CREVICES

The new end ring permits joining the inner Monel shell and the Monel steam jacket shell in an all-welded construction.

No more rivets! No more solder! The inside of the Monel collar is perfectly smooth, always easy to keep surgically clean. What's more, the danger of leakage around rivet holes is ended.

WHY MONEL?

Monel — the standard metal for many types of hospital equipment such as laundry machinery and laboratory apparatus—is used because it is stronger and tougher than structural steel. Because it is non-rusting and corrosion resisting. Because it stands up against heat, steam, moisture, and the corrosive action of acids, alkalis, detergents

and hospital solutions.

Solid metal through and through, Monel does not chip or peel. It has no surface coating to wear away. When you recommend Monel, you are offering clients a solid metal with solid advantages — and every one adds up to increased protection, long service life and reduced maintenance expense.

NEW CONTROL

In these sterilizers, your clients also get American's new "Cyclomatic Control." It is designed not only to simplify operation, but to guarantee complete sterilization. Nurse merely loads, sets timer and selector, turns starting valve. The entire sterilizing cycle is automatically governed. When buzzer sounds, nurse turns valve to "off" position, and removes sterilized load. There's no lost motion, no guesswork, no wasted time.

GET ALL DETAILS

For full information about Monel pressure-type sterilizers with "Cyclomatic Control," write AMERICAN STERILIZER COMPANY, Erie, Pa.

housing and architecture for the Columbia University Summer session of 1950.

• Lehigh University will hold its second Product Design Seminar June 26 to July 21, 1950, again in cooperation with the Society of Industrial Designers.

Fellowships

• The 19th competition for the James Harrison Steedman Memorial Fellowship in Architecture will take place this Spring. The Fellowship is an award of \$3000 for a year of study and travel in foreign lands.

The competition is open to all graduates of accredited architectural schools in this country who have had at least one year of practical work in the office of an architect, including one year's residence in St. Louis, Mo.

The competition consists of a 15-hour preliminary sketch followed by a sixweek development period. The preliminary exercise will be held on Saturday, Mar. 4, at the Washington University School of Architecture, or, in the case of candidates living outside St. Louis, during the same hours under duly approved conditions.

Application blanks may be obtained from the School of Architecture, Washington University, St. Louis, Mo. They must be filled out and returned before Feb. 18, 1950.

• Applications for the Lowell M. Palmer Fellowship in Architecture at Princeton University will be received by the Secretary of the School of Architecture until March 1.

The purpose of the Fellowship is to assist a student of unusual promise in the advanced study of architecture at Princeton, including research in architectural composition at the Architectural Laboratory, and the opportunities offered through the close affiliation of the School of Architecture, the Bureau of Urban Research, the Department of Urban Research, the Department of Art and Archaeology, and the other graduate departments of the university.

The Palmer Fellow is exempt from tuition fees and will receive a stipend of \$700 during his year of residence at Princeton. He will be entitled to all the privileges of a Fellow of the University, including residence in the graduate college buildings.

NOW... another exclusive CURTIS achievement

the NEW PRESPINE

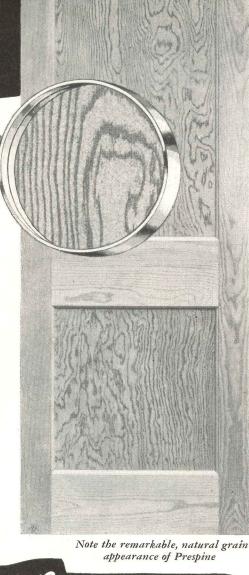

Now Curtis adds *another* major advantage to Prespine—the all-wood panel material that provides new value in Curtis doors, cabinets and other woodwork! Today, by an exclusive Curtis process, the beautiful natural grain of ponderosa pine is accurately reproduced on Prespine. Here is another example of the way Curtis research constantly enhances woodwork beauty and utility.

Remember, Prespine is available only as used in the production of Curtis Woodwork . . . and at no extra cost. Read about its advantages below—then mail the coupon for additional information.

Here's What's New About Prespine!

- Made by an exclusive Curtis process that duplicates the natural grain of ponderosa pine on Prespine.
- 2. Prespine can be lightly sanded before finishing, if necessary.
- Prespine can be painted, stained, shellacked, waxed, lacquered, varnished, enameled or blonded.
- Prespine can be cleaned or washed after it is finished.
- Prespine is fadeproof and lightproof. It has been subjected to rigid tests which prove its lasting durability.
- 6. Prespine, when it is finished, is weather-

- resistant—withstands rain, snow, excessive humidity or sharp changes in temperature.
- Prespine can be quickly and economically finished by skilled or semi-skilled labor.
- Because of the nature of Prespine, there
 can be no grain raising or consequent
 checking or blistering of the finish.
- Prespine door panels can be replaced as easily as ordinary door panels.
- All exterior Curtis Prespine doors are treated with toxic-water repellent solutions to resist termites and decay.

PLUS

these famous Prespine features

Made of finely divided wood by an exclusive Curtis process. Prespine panels withstand warping, shrinking and swelling. Prespine resists heavy impact blows . . . won't mar, dent or scratch readily . . . won't splinter or chip. It has superior rigidity . . . provides an ideal bond for paint or stain.

Prespine is used in most Curtis flat panel door models, including interior, exterior and garage designs.

Curtis Companies Service Bureau

Applicants must be citizens of the United States, holders of a bachelor's degree, less than 27 years of age on Oct. 1, 1950, and in good physical condition.

In awarding the Fellowship, special emphasis will be placed on (1) achievement in architectural design; (2) personal qualifications; (3) scholastic record; (4) professional experience.

WITH THE A.I.A.

Gold Medal Award

Sir Patrick Abercrombie, M.A., Fellow of the Royal Institute of British Architects and internationally known British architect and town planner, will receive the Gold Medal of the American Institute of Architects at the 82nd A.I.A. convention in Washington, D. C., next May 10–13.

Sir Patrick, who will be the sixth foreign architect to receive the Gold Medal, highest honor the Institute can bestow, was the Royal Gold Medallist in 1946. For the past 11 years he has been professor of town planning at the Bartlett School of Architecture, University College, London. Earlier, he was for 20 years professor of civic design at Liverpool University.

In announcing the selection of the Board of Directors, Ralph Walker of New York, A.I.A. president, said the award was made in recognition of Sir Patrick's "distinguished contribution to the profession of architecture and regional planning."

A.I.A. Honor Awards

Awards for distinguished accomplishment in three classes of buildings—residential, commercial and religious—will be made in the second annual nationwide program of honor awards for current work of the American Institute of Architects.

All entries must be buildings designed by registered architects practicing professionally in the United States, although the buildings may have been erected either in this country or abroad. Buildings must have been erected since Jan. 1, 1945.

Entries, which must be prepared and submitted according to mandatory rules of the program, must be submitted directly to national headquarters of the American Institute of Architects and shipped on or before April 26.

A First Honor Award and a number of Awards of Merit in each classification will be selected by three separate national juries, one for each classification. Announcement of awards will be made on May 11 at the 82nd convention of the A.I.A.

All entries receiving awards, and such other entries as the juries may select, will become A.I.A. property for exhibits.

Copies of the program of National Honor Awards are available to architects who are not members of the A.I.A. from the Department of Education and Research, The American Institute of Architects, 1741 New York Ave., N. W., Washington, D. C.

THE POWERS REGULATOR CO.

Over 55 Years of Water Temperature Control

WASHINGTON NEWS by Ernest Mickel

The preelection session of the 81st Congress is not likely to upset the clearest conclusion reached in all the preliminary prophetic writings - that total volume of construction put in place during 1950 would not vary to any great degree from that of 1949. All the fulminations on Capitol Hill this season will not alter the outlook for a definite increase in the public work ratio.

Programs determined in 1949 will be worked out this year and thereafter. The divergent trends in public and private construction will carry over.

THE ADMINISTRATOR DARED THE ARCHITECT . . .

"Plan our hospital so that late charges can be sent from any department to the business office in a moment or two.

— And, the architect did without altering his design!

He simply called on the TelAutograph Corporation. Within a short time he had all the information he needed to fit a TelAutograph Telescriber System into the plans.

This system of transmitting handwritten messages over wire to one or many distant positions has been used for years in hospitals throughout the United States and Canada. Interdepartmental communication in these hospitals is instantaneous . . . and in handwriting.

Of course, TelAutograph telescribers are used in all types of business and industry. Available for your use is literature both of a specific and general nature. Address your requests to Dept. A-1.

16 West 61st Street, New York 23, N. Y.

"Handwritten Messages Deliver

Themselves ... While You Write"

Economists in General Services Administration say public construction in 1950 can account for as much as \$6 billion out of a total \$19 billion volume. Such a percentage would bring the public construction ratio to a little more than 31 per cent. In 1949 it was 27 per

Significantly then, public construction now is just beginning to reach the same range as the average proportion during the 20-year period from 1920 through 1939. Obvious reasons have delayed this pick-up on public building. As stressed on every occasion by General Services personnel, depression, war and postwar enigmas piled up a hitherto unimagined backlog of need; need for municipal utility improvements, for new schools, churches, hospitals, public buildings and every type of construction needed to serve an expanding economy. Increasing population is another source of pressure.

Wartime and later cross-migrations have added to the demands. New developments for housing mushrooming on the fringe of metropolitan areas continue to create a vast potential for architectural and engineering services. As GSA puts it, full employment and a very high national income have resulted in an accepted higher standard of living. All this has added to needs already backed up by long postponement of construction.

What's being done? Private and public sources acknowledge that present and projected accomplishments fall far short of meeting this piled-up construction need; a reservoir of demand that requires billions of dollars in public funds and private investment. But already Congress is talking economy — and will practice it before the current session ends. The money to cover loans to states and cities for advance planning of public works has been allocated, the public housing program is pushing ahead. These, however, appear to be small stabs at the larger problem.

Housing Legislation

There was a call, meanwhile, from both private and government people for a 1950 betterment of the record number of approximately one million housing units added to the country's inventory last year. Such an increase, if it comes about in substantial proportions, in turn must be reckoned with in terms of

RIGHT. At the Commercial National Bank in Shreveport, La., (McKim, Mead & White, architects; S. G. Wiener, Asso. Archt.) Q-Floor is installed. It is welded directly to the beams over which light-weight concrete fill is placed to provide a level surface. The cells are available for the distribution of electrical and telephone wiring. Changes can be made quickly.

ROBERTSON Q-FLOOR

will be used in PITTSBURGH'S NEWEST SKYSCRAPER

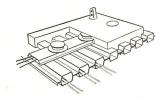

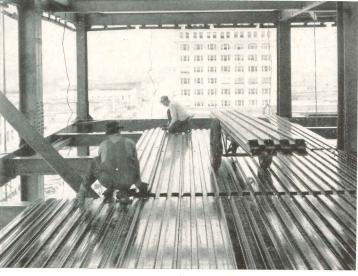

Soon to rise above Pittsburgh's Golden Triangle is the new Mellon-U.S. Steel Building. The owners are building wisely for they have insisted on Robertson Q-Floor, an element in the structure that will contribute most to keeping the building electri-

cally modern, and free from Office-Building-Old-Age. Q-Floor is a steel cellular sub-floor welded to the structural frame. It goes in quickly and immediately becomes a working platform for all trades. The clean, dry construction results in continuous work even in freezing weather and eliminates delays due to olderfashioned construction methods. Suspended ceiling, ducts, and other mechanical features of the building hang from the underside of the Q-Floor.

The steel cells of Robertson Q-Floor function as a super-efficient underfloor electrical duct system. Outlets for all services are available exactly where needed. Desks, partitions, business machines can be located and relocated

with complete freedom. Q-Floor will keep the Mellon-U. S. Steel Building in step with every new electrical development the future brings.

World-Wide Building Service

One touch of your finger will tell you why wood windows maintain their widespread popularity. For wood is a *natural* insulating material. It retards transmission of heat or cold, minimizing dimensional change due to temperature variation. Ponderosa Pine's low density, smooth texture, and uniform grain provide a natural bond for all finishes. Moderate in cost, and available in modular standard sizes in a wide variety of styles, Ponderosa Pine windows are correctly proportioned and precision made for quick installation. These windows are available toxic preservative treated in accordance with tested industry standards. Preservative treatment of your Ponderosa Pine windows gives added resistance where staining, decay, insect attack or humidity are problems.

THE RECORD REPORTS

WASHINGTON

(Continued from page 162)

still more public works construction to service it.

The President's messages to Congress confirmed what was already known; that the Administration seeks modification of housing laws, new legislation to encourage more housing construction for middle-income families, and a 50 per cent increase in total home output.

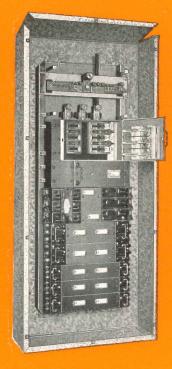

Architects are pointedly concerned in the current effort by federal housing groups to increase the size of the socalled economy house. Efforts are being made to change the law in the direction of larger guarantee percentages (but not more actual money) for three-bedroom houses. This carries the incentive changes made in the National Housing Act last summer a step further. The Housing and Home Finance Agency remains convinced that there is a vast "untapped" sale market for home builders in the \$7000 to \$9000 range. Smaller down payments are an objective as well.

(For the record, HHFA considers a middle-income family as any with income from \$2700 to \$4400 a year. Assuming 20 per cent as a fair payment for shelter costs, the range of payment for these families then is from \$45 to \$73 per month, a median of about \$59 or \$60. The formula is applicable to urban families only, and according to the 1948 census an estimated one-third of all city families now falls in this category.)

When the die has been cast on 1950 legislation there still will be a program of Federal Housing Administration home mortgage insurance. This is certain in spite of the fact the HHFA is recommending the final retirement of Sec. 608 (Title VI) as such. Operating under continued reprieves since the war, this program on large-scale rental housing developments probably will be retained in its essential features. A new amendment under Sec. 207, Title II, has been suggested to catch the remnants of

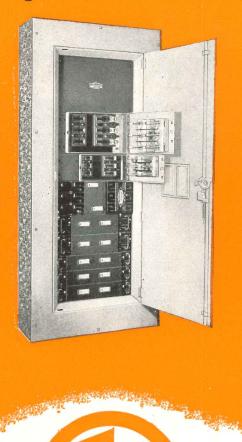

The broader plan for a change in the present housing law contemplates a private capital cooperative which would entail, again, the federal backing of private money investments. The last extension of Title VI, Sec. 608 mortgage insurance carried the plan through March 31. Unless Congress gets bogged

Re-designed inside and out

M FEEDER PANELBOARD

LESS SPACE IS REQUIRED for the same panel-board requirements in the *re-designed* ® FEEDER PANELBOARD... without sacrificing such popular ® features as generous wiring space and ease of installation.

This improved, compact ® FEEDER PANEL-BOARD is built of standardized units and assembled as required for specific application. Four standardized widths, 10 standardized heights and 3 standardized depths of boxes meet any requirement. Boxes are shipped from stock... with removable ends to permit drilling conduit openings on the job. Panels are readily installed after boxes are in position.

Two dependable @ Switches... the @ PULFUZ-SWITCH and the @ KLAMPSWITCHFUZ... make these feeder distribution panelboards the finest in safety and efficiency. Both types combine switch and fuse in one unit so that current is OFF when the door is opened, or the fuse carrier removed. This makes replacement of fuses safe... quick... simple.

In operation, the switch blades make pressure contact with the fixed switch parts, assuring full current-carrying capacity. Silver-plated contact parts insure low resistance to current flow, and reduce heating.

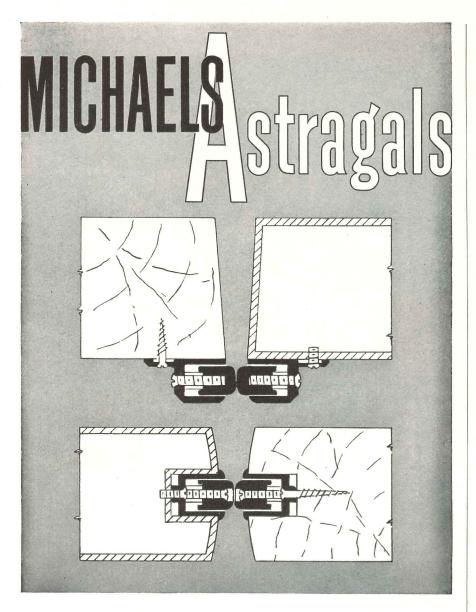

- (A) PULFUZSWITCH capacities: 30, 60 and 100 amps., 250 volts AC or DC; 30 and 60 amps., 600 volts AC, 2, 3 and 4 pole.
- (A) KLAMPSWITCHFUZ capacities: 30 to 600 amps., 250 volts AC or DC; and 30 to 200 amps., 600 volts AC in 2, 3 and 4 pole types, single or double throw.

For more information about the re-designed (A) FEEDER PANELBOARD, talk it over with your (B) Representative (he's listed in Sweet's).

THE RECORD REPORTS

WASHINGTON

(Continued from page 164)

down with a civil rights filibuster, it is likely floor action on new housing proposals will come before that time.

Progress In Research

There were two important developments on the research front during the past month: Dr. Richard U. Ratcliff of Wisconsin University took over as new Director of Housing Research in the Housing and Home Finance Agency, and the Building Research Advisory Board held its first conference — on weather effects.

Said Dr. Ratcliff after his appointment by Administrator Raymond M. Foley: "It is trite but true to say that Public Law 171 — the Housing Act of 1949 — marks the dawn of a new and promising day in housing research." He sees its greatest importance in the recognition of the role of research in the attempt to provide a decent home and a suitable living environment for every American family.

HHFA's new Director of Housing Research

As details of the comprehensive housing research program are worked out under the new director, they will encompass five major objectives:

- 1. The production of housing of sound standards of design, construction, livability, and size for adequate family life.
- 2. The reduction of costs of housing without sacrifice of such sound standards.
- 3. The use of new designs, materials, techniques, and methods in residential construction, the use of standardized (Continued on page 168)

dimensions and methods of assembly of home-building materials and equipment, and the increase of efficiency in residential construction and maintenance.

- 4. The development of well-planned, integrated, residential neighborhoods and the development and redevelopment of communities.
- 5. The stabilization of the housing industry at a high annual volume of residential construction.

It is clear that under Dr. Ratcliff's leadership the research effort will take the long view; the program will not proceed too fast for its own good. He means to put first things first, to identify and evaluate the problems of housing before defining even the fundamentals of investigating these problems. Also, through his first remarks following the appointment runs the philosophy of further economies in home production. Besides financial costs, the director plans to cope with social costs which include discomfort, inconvenience, irritation and discontent, misery, ill health, disease and loss of working efficiency, family disruption and disorganization, group tensions and conflict.

A large order, any way it is interpreted.

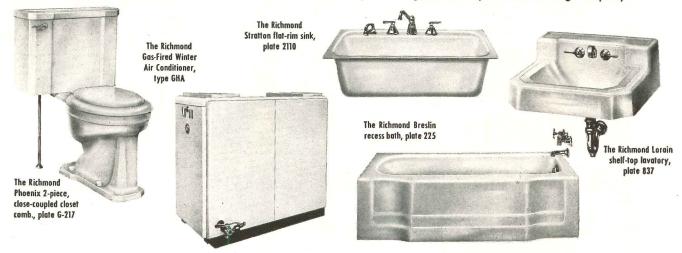

Future operations of the building industry will be affected as well by the steps outlined by the BRAB under direction of William H. Scheick. Six specific projects are to be started immediately and the weather conference already has given concrete evidence of the Board's programs. The six specifics are:

- 1. A survey to develop a list of urgent problems of the building industry susceptible to solution by research. This information will be sought by a canvass of research agencies, trade and professional organizations, and technical and research personnel in the industry.
- 2. A series of research correlation conferences to bring together those actively engaged in research along specific lines in order to explore and evaluate subjects, review accomplishments and chart future action. (The weather conference is an example.)
- 3. Initiation of detailed analysis of "master outline" of building research and related fields to clarify the present

picture of building research. This will necessarily be a long-term project.

4. Encouragement of government agencies concerned with building research to avail themselves of the advisory services of BRAB.

5. Cooperation with builders' and contractors' associations to promote field tests and demonstrations of research results as a method of speeding up the application of technological advances.

6. Development of an effective program of publication and information.

Prefabs

As Congress convened, there was a possibility efforts would be made to

revive the plan to establish a \$25 million loan fund for supporting distribution of prefabricated housing — the so-called interim financing loans. This plan was defeated in the last Congressional session, but there was strong talk it might be proposed again.

Simultaneously, the Reconstruction Finance Corporation said it would make no more production loans to Lustron Corp. at Columbus, O.; at least until it might be ordered to do so by Congress. This word came just as Lustron was preparing to ask for an additional loan of \$12.5 million to get it out of the red.

The whole Lustron inquiry appeared to be coming quickly to a head. Rep. Albert Cole (R-Kans.) was pressing his advantage after inaugurating a full investigation last August. He wrote the federal lending agency asking for a full accounting of the Lustron loans. He will not let the matter cool. Meanwhile, RFC's legal staff had requested Lustron to file an explanation as to how it hopes to get out of the current contretemps.

Other organized prefabbers never have been too enthusiastic over the production loan idea. Interim financing would be more acceptable.

SHORTS

- The Army has been perfecting an all-plastic house with the advantage of more durability for storage. Packaged utilities, also worked out for manufacture from plastics, have been designed. While referred to as a challenge to the plastics industry because of a huge potential market, it was acknowledged extremely high production costs will cool industry interests for some time to come.
- The Defense Housing Commission, a three-man team appointed by Defense Secretary Johnson to study military housing needs, has returned from an inspection trip in Alaska.
- A graphic-arts mechanic at the Norfolk Naval Air Station has devised a new method for speedy reproduction of line drawings to scale by photo. Reversing the normal practice, the rear of the copy camera is made moveable and lens remains fixed. Graduated scales are installed on the bed for use in measuring size of copy desired. This makes it possible to turn out copies quickly and

THE Sedquick ROTO-WAITER ...a new kind of fully automatic electric dumb waiter that never overtravels

FOR TWO-STOP INSTALLATIONS . . . the new Sedgwick Roto-Waiter, with its unique endless chain drive principle of operation, embodies those features of safety, dependability and economy that make it the ideal dumb waiter for schools, hospitals, hotels, restaurants, stores, banks, libraries, factories, clubs, residences and other commercial, institutional and industrial buildings.

Sedgwick Roto-Waiters . . .

- 1. Never overtravel
- 2. Are completely factory assembled and tested
- Operate automatically, safely with push-button control and doors interlocked.
- 4. Require only minimum clearances
- 5. Have an overload safety device for safe operation
- 6. Cut costs with simplified motor and control equipment
- 7. Require no heavy load-bearing supports, except at bottom
- 8. Are easy to install

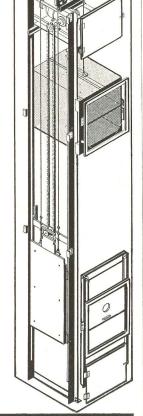

Dimension table lists three standard counterweighted Roto-Waiters. A Sedgwick uncounterweighted Roto-Waiter (with car size 24"x24" x36", 150 lbs. capacity) is also available when the dumb waiter is to be installed for undercounter use.

STANDARD ROTO-WAITER DIMENSIONS									
Size No	2C	3C	5C						
Capacity, Ibs	200	300	500						
Car width, in.	24"	30"	36"						
Car depth, in.	24"	30"	36"						
Hoistway width, in	33"	39"	45"						
Hoistway depth, clear in	27"	33"	39"						
Hoistway depth, including doors, in.	29"	35"	41"						

Remember, too—the Completeness of the Sedgwick Line
That Enables You to Meet Every Client's Requirement . . .

In addition to the Sedgwick Roto-Waiter, Sedgwick also builds Multi-Stop Electric Traction Dumb Waiters for three or more landings—with a wide selection of specially engineered control equipment and signal systems to suit individual service needs. Other Sedgwick Dumb Waiters—including both electrically and manually operated types—are likewise available in a wide range of sizes and capacities. Specify, too, Sedgwick Steel Dumb Waiter Doors for complete satisfaction.

Feel free to consult our engineers, who will be glad to work with you on any vertical transportation problem.

COMPANY

CITY ZONE STATE

FOR CREATING BEAUTIFUL INTERIORS

THE RECORD REPORTS

WASHINGTON

(Continued from page 170)

without unnecessary waste of film due to guesswork.

• All government agencies concerned have issued new orders on tie bids which will aid small business firms in getting contracts in distressed employment areas. The orders determine award of contracts where equal bids have been received and where both large and small concerns are bidding.

• Basing point problems are due for more airing in Washington. Settlement of the proposed consent order in the steel case was still in question as the new year began. Furthermore, it was pretty certain Commerce Secretary Sawyer's new interagency committee on competition and monopoly would get into the pricing practices and wind up with a conclusion or two regarding freight absorption and other aspects of the basing point problem. Congress will consider it again also.

- By December 1, 1949, the Federal National Mortgage Association had purchased FHA-insured or VA-guaranteed home mortgages in the total amount of \$767,211,000. It had outstanding contracts to acquire additional mortgages aggregating \$792,127,000. This secondary mortgage operation was well fixed financially for future functioning.
- The American Legion has launched a survey to prove or disprove the recent contention of former President Herbert Hoover that 70,000 federal hospital beds are unoccupied while efforts are made to build facilities for 50,000 additional beds. The Veterans Administration hospital construction program continues to operate on the curtailed schedule assigned a year ago in an order signed by President Truman.
- Tests of "rubber highways" are being made in Virginia. A small amount of natural rubber has been incorporated in asphalt highways and has been found to lessen skidding materially.
- It is estimated the prefabricated housing industry shipped 35,000 permanent units of wood construction in 1949. This is an increase of 16.67 per cent over the 30,000 shipped in 1948. Eighty-five companies were covered in a survey which resulted in the preliminary estimates.
- Civil Aeronautics Administration has issued new information on airport planning and design. The pamphlet, Airport Design, covers general principles of airport planning and design and emphasizes preliminary steps involving size and type of field to be constructed, site selection, airport layout, plans and specifications and details of design. Drawings show a variety of model airport layouts for both large and small fields. Airport Design discusses soils, paving, drainage, lighting, turfing and other items important to sound airport construction.

Write today for full information

"Capture the Sun with B & G Hydro-Flo Heating" presents the colorful story of this forced hot water system . . . the B & G Cat-alog gives you complete product data. Send for your copies.

Soon to be completed, this modern housing project provides shelter for 362 families. The selection of B & G Hydro-Flo Heating was prompted by the well-known comfort-economy advantages of this system.

The project is divided into eleven groups of buildings with a boiler room for each group. Trunk supply and return mains run the length of each group, with Monoflo single mains led into the individual four-family buildings. Mains are copper tubing with B & G Copper Monoflo Fittings on both the supply and return risers to the convectors.

Here again is another demonstration of the universal application or B & G Hydro-Flo Heating. Cottage, apartment, commercial or industrial building-all are more comfortably and economically heated with this modern forced circulation hot water system.

Dept. BJ-32, Morton Grove, III.

Agreement Is Reached On New Fee Schedules

Maximum fees to be allowed for architectural services for the public housing program have been established on a "fixed fee plus reimbursable contract" basis, the American Institute of Architects has announced.

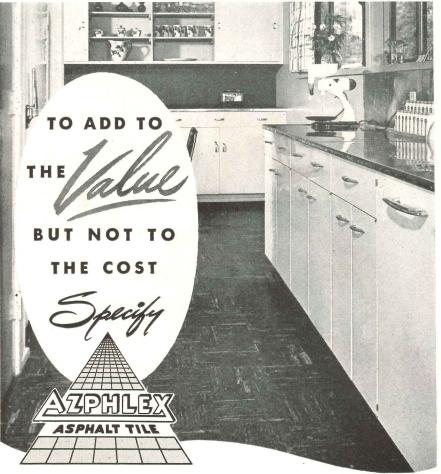

The newly approved fee schedule was worked out jointly by the A.I.A., the

Public Housing Administration and the National Association of Housing Officials after both the N.A.H.O. and the A.I.A. had requested reconsideration of a fixed fee schedule announced by PHA in October.

The new basis of compensation, while generally 2.5 times payroll costs, provides for a contract which establishes a fee to include three factors: a fixed amount equal to forty per cent of the maximum fee schedule contained in the PHA schedule; an amount for "time-card costs" (technical payroll) which would be reimbursed to the architect on presentation of cost data approved by the local housing authority; an amount for overhead equal to 50 percent of "timecard costs."

As an alternate, now designated Option No. 1, the PHA intends to retain its previously approved schedule of fees. The new schedule will be known as Option No. 2. The decision as to whether the architect's contract is based on Option No. 1 or Option No. 2 will be left entirely to the determination of each local housing authority and its architect.

Representing the A.I.A. in the negotiations were members of the Committee on Fees: Clarence B. Litchfield, chairman; Harry M. Price, vice chairman; and David H. Morgan.

• For floors that will look better and clean easier... that will last longer under the hazards to which they are subjected by everyday family life... AZPHLEX Asphalt Tile is unsurpassed. Consider these AZPHLEX plus values:

MAXIMUM RESISTANCE to indentation by foot traffic, rolling or standing loads.

GREASE RESISTANT in the highest sense of the word — won't stain or soften if subjected to animal, mineral or vegetable greases, alkalis, alcohol or mild acid solutions.

THROUGH-AND-THROUGH COLORS and marbleizing that will never wear off — fine texture that keeps a smooth, easily polished surface.

UINFORM HIGH QUALITY and dimensional stability — every tile die-cut.

CUSTOM INSTALLATION to produce exactly the design you specify, in the colors you specify from our wide range of samples.

AZPHLEX is ideal for installation over wood, metal or concrete slab sub-floors, above, on or below grade. It is flexible — and so tough that 1/8" AZPHLEX is the equivalent of 3/16" regular asphalt tile. Available in 10 clear, true colors: 1/8" and 3/16" thicknesses: 6" x 6", 9" x 9", 6" x 12", 12" x 12", 14" x 28", 12" x 12" DUOTONE and 1" x 24" feature strips in all colors.

AMWELD

... the ultimate answer to

FLUSH INTERIOR STEEL DOOR, FRAME

and SLIDING CLOSET DOOR UNIT

requirements

Photographs of Graefield Terrace Birmingham, Mich.

BUILDER: H. J. Durbin, Detroit, Michigan.

ARCHITECT: Merle Wm. Hogan, Detroit, Michigan.

Send for the illustrated AMWELD BUILDING PRODUCTS A.I.A. File No. 16 containing complete specifications. Selection charts and installation diagrams are available for the asking.

Large scale production, based on 32 years' experience in precision manufacturing, enables AMWELD doors and frames to cut building costs and provide lasting beauty with trouble-free service. AMWELD Steel Door & Frame Units are designed to meet today's modern construction standards, blend with all types of architecture and lend themselves to installations at rates up to five times as great as those where "assembled-on-the-job" units are used.

Doors are available in 1%" and 1¾" thicknesses; 1¾" available as single-swing or double-acting. These doors may be provided with integral louvers or vision panels. Doors are factory rabbeted and bored for standard hardware. Frames and hinges are furnished as a one piece welded assembly. To insure parallel alignment, removable steel spreaders are welded to bottoms of the frames. Doors are furnished with a neutral color primer, electrostatically applied and controlled; frames are rust-resistant primed.

AMWELD METAL SLIDING CLOSET DOOR UNITS

Sliding closet doors have definite advantages in the saving in space and increased accessibility to closet content, plus saving in initial construction cost. Steel door panels are formed on four edges, fitted with finger pulls. Jambs, header and track—the same high quality and construction as door frames. Available for 3', 4', 5' and 6' openings—2 doors. AMWELD Steel Sliding Closet Door Units are also available in packaged, knocked-down units.

REVERE-SIMPLEX REGLET SYSTEMFor Waterproofing Spandrel Beams

• The Revere-Simplex Reglet System is an economical and efficient method of flashing spandrel beams and column faces with enduring copper. This system offers the following advantages:

Affords greater moisture protection for the building.

Eliminates the necessity of flashing the entire face of each spandrel beam. In that way, it not only avoids interference with wall ties, stone anchors, angle bolts, etc., but also insures substantial economies through a large saving in flashing material.

Diverts all seepage to the exterior wall face, and prevents rusting of the steel work.

Is based upon the use of the Revere-Simplex Reglet, which is a simple, practical, easily installed receiving device for securing metal flashings in concrete. This patented reglet provides a permanent watertight connection between concrete and copper flashing, for all concrete surfaces.

The Revere-Simplex Reglet not only overcomes installation difficulties experienced with ordinary "open slot" metal reglets, but provides a substantial saving in cost as well. This is due to its many exclusive features, all of which cut down installation time and insure a superior flashing installation.

Write today for your copy of the new 6-page folder which describes the Revere-Simplex Reglet System. This folder includes short form specifications for the Revere-Simplex Reglet System and detail drawings showing where and how copper waterproofing should be used below the roof line.

Revere products now available through Revere Distributors include: Sheet and Roll Copper for roofing, gutters, flashing, etc.; Lead-Coated Copper; Revere-Keystone Thru-Wall Flashing; Revere-Simplex Reglet and Reglet Insert Flashing; Revere-Keystone Vertical Ribbed Siding. A Revere Technical Advisor will always be glad to consult with you without obligation.

THE RECORD REPORTS

NEWS FROM CANADA

By John Caulfield Smith

National Film Board Photos

OTTAWA OF THE FUTURE

The National Capital Plan, shown here in photos of a marvelously minute and accurate model currently touring the Dominion, proposes creation in the heart of Ottawa of a large park surrounded by public buildings. First step will be construction of a new bridge (top right in photo above) to relieve congestion at the Plaza. New city hall, new National Institute of Fine Arts, a civic theatre are among the projects visualized in the completed plan.

(Continued on page 180)

Why Rotary Oildraulic Elevators were selected for new Doctors' Hospital at Coral Gables

■ Quietness was an important consideration in the design of the new Doctors' Hospital in Coral Gables. Rotary Oildraulic Elevators were selected because the Rota-Flow hydraulic power unit eliminates the noise and vibration of ordinary hydraulic elevator pumps. The elevator car rises and descends on a pulsation-free column of oil which is "locked" whenever the car is stopped.

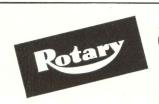

Smooth starting, smooth stopping and precise, automatic floor leveling are other essentials. Patients must be moved without jolt or shock. By means of a balanced-pressure hydraulic control system (Rota-Relief), Oildraulic Elevators operate with velvet smoothness. And Rotary guarantees automatic landings

Architects: Stewart & Skinner Contractors: Fred Howland, Inc. Elevators installed by: Miami Elevator Co.

within 1/4" of floor level, regardless of load size or rate of speed.

Low installation and operating costs, flexibility of design made possible by eliminating penthouse and heavy shaftway structures, and long life make Rotary Oildraulics the most practical of all elevators.

If a 2, 3 or 4-story building is among your projects for 1950, see our section in Sweet's File or write for Rotary catalog and list of recent installations.

THE RECORD REPORTS

CANADA (Continued from page 178)

Planning Spotlighted

With the National Capitol Planning Committee currently taking plaudits for its touring presentation of the master plan for Ottawa (see p. 178), and new reports from Toronto and Edmonton on

the status of planning for those cities, development planning seems to be very much on center stage in Canada.

Hon. Robert H. Winters, Minister of Reconstruction, recently underlined one practical reason when he told the Maritime Conference of the Community Planning Association of Canada that he doubted whether federal or provincial governments should make financial contributions for housing in any area where

a process of appraisal and planning has not taken place.

Encouraged by official approval of the Toronto Planning Board's proposals for the city's next 30 years of growth, the Toronto and York County Planning Board has submitted a report dealing with the metropolitan area as a whole. This report advocates outright amalgamation of Toronto and seven suburban municipalities as a metropolis of 900,000 as well as unified planning and spending for highway, water sewerage and other public services in the area.

A report from Professors John Bland and Harold Spence-Sales of McGill University on planning for Edmonton draws attention to a problem which is not confined to Edmonton - the difficulty of defining the useful areas of activity in planning of permanent municipal servants and the citizens' groups making up community planning commissions. The report recommends an advisory District Planning Board staffed with provincial and municipal members and a City Planning and Development Board of city officials responsible for planning.

Model photo: Manufacturers Life Insurance Head Office, Toronto, showing addition proposed to double office space. Marani & Morris, architects. Below: present structure

Special problems of installation will receive prompt attention from the Rixson engineering and designing departments.

Checking Pivot Hinges Are Non-Handed—Single and Double Acting — and Priced for Popularity

Thoroughly dependable and reasonably priced, Rixson Series 350 Pivot Hinges are favored everywhere on lavatory stall doors, dwarf doors, rail gates, booth doors, etc. Can be used on right or left hand single acting or on double acting doors. Spring and hydraulic mechanism assures full checking control all the way to closed position of the door. Furnished with nearly any type of bracket, pivot or arm.

Build any style of fireplace around the proved

HEATILATOR* FIREPLACE UNIT!

Assures correct execution of any design

The Heatilator Unit is a complete fireplace from hearth to flue, around which any kind of decorative masonry in any desired form can be built. It consists of:

- 1. A scientifically designed firebox
- 2. A properly proportioned throat to insure proper draft
- 3. A removable damper with adjustable poker control
- 4. Extra wide down-draft shelf made of heavy steel
- 5. Complete metal smoke dome to speed passage of smoke into chimney

By pre-building these vital parts, the Heatilator Unit insures a fireplace that draws properly and will not smoke. By eliminating the need for guesswork and rule-of-thumb methods on the part of masons, it permits unsupervised construction.

Original economy —Long-run savings!

Because the Heatilator Unit is ready to install, with no extra parts to buy or build, it saves mason time and labor. It saves on expensive firebrick. Thus, a completed Heatilator Fireplace costs little, if any, more than an ordinary fireplace. And in addition, your client can count on the dollars-and-cents savings of smokeless, trouble-free operation.

Heatilator Fireplace Gives More Comfort, Greater Pleasure!

A Heatilator Fireplace draws in air from floor level, heats it, and circulates it to

The white warm air grilles of this Colonial Fireplace blend with the woodwork.

An example of warm air outlet grille placement in a fireplace with projecting mantel.

every corner of the room, and to other rooms as well. By utilizing heat that is ordinarily wasted, it makes furnace operation unnecessary on cool Spring and Fall days.

In mild climates, it is the only heating equipment needed—saving the cost of expensive heating plants that are used only a short time each year.

The Ideal Way to Heat Camps and Cabins

Heatilator Fireplaces make camps and cabins usable weeks longer in Spring and Autumn. It solves the heating problem in basement recreation rooms without unsightly pipes and radiators.

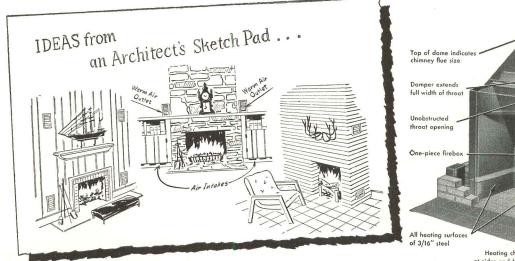

Heatilator Fireplace Units are not a new, unproved idea. Perfected over twenty-two years ago, they are in successful use in hundreds of thousands of American homes.

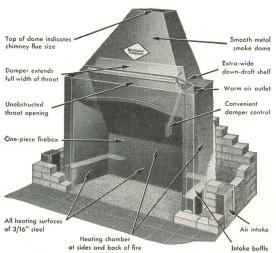

No Limit to Ingenious, Decorative Ways of Placing Outlet Grilles

The Heatilator warm-air outlet grilles are easily placed to blend with the general fireplace design... to provide points of decorative interest. Or, in many cases, they can be completely hidden in cupboards or bookcases. They can even be placed in an upstairs or adjoining room!

Give clients the advantages of a genuine Heatilator Fireplace. Write today for complete specifications and illustrations showing the unlimited variety of architectural styles possible with Heatilator Fireplace Units. Heatilator, Inc., 612 E. Brighton Avenue, Syracuse 5, N. Y.

*Heatilator is the reg. trade mark of Heatilator, Inc.

HEATILATOR America'S FIREPLACE

PROTECT HANDS

With BRADLEY Sanitary Washfountains

When you say something is "hospital clean" it indicates the utmost in sanitation care. Just so, when you speak of "sanitary wash fixtures" *Bradley* Washfountains come to mind.

For Bradleys represent the *utmost* in health protecting facilities.

ECONOMICAL — CONVENIENT

One 54-in. Bradley Washfountain serves 8 to 10 persons simultaneously. An ever-clean spray of tempered water is supplied by a single central sprayhead using little more water for *ten* than a conventional washbasin uses for *one*. There are no faucets to touch—and the self-flushing drain bowl prevents collection of contaminating water.

BRADLEY DUOS, built to serve two persons in smaller or more secluded washrooms, have all the big Bradley features including automatic footcontrol. A DUO hospital installation is shown at right above. Send for illustrated Catalog 4701 and read all the interesting facts about Bradley Washfountains. BRADLEY WASHFOUNTAIN CO., 2227 W. Michigan St., Milwaukee 1, Wis.

THE RECORD REPORTS

(Continued from page 10)

but often there is only one sponsor bidding for the work.

As the Wherry Bill was written, the military projects may be either on or off the military reservation. Private interests undertake the developments with mortgage money insured by the FHA. Congress last year voted a \$1 billion fund for this insurance. Administered by the FHA, it is charged on the books to the military.

Sponsors bidding for the right to construct these projects on their own must submit an outline, a site plan and line drawings to form the basis for rent schedule determination. The rents to be charged must be in line with ability of the personnel to pay. Complete plans and specifications are not prepared until the final sponsor is selected.

In general, the financing plan follows the pattern of FHA operations under Sec. 608. Each of the three services must certify, on its own projects, that the location is fairly permanent and that the proposed housing is needed. This is done before FHA insurance is obtained.

There is no separate set of FHA construction standards for the Wherry Bill housing. An agency spokesman said there might have to be some modification of the existing rules and regulations in certain instances affected by land arrangements, but the present FHA standards will apply as written to the military rental construction.

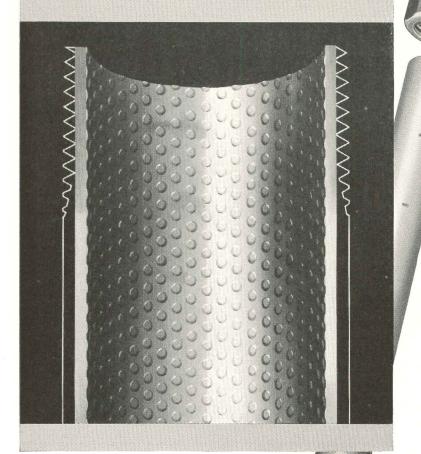

If the land selected for the project is government property inside the reservation, the branch of service concerned can rent or sell the area to the sponsor selected. In most instances the military establishment will furnish utility connections for the development. This provision was necessary because often the post is located in an isolated area, away from ordinary city connections.

It is important to the prospective builder and architect that decisions in the program made at local level are almost always upheld and carried on through for the individual development. The National Military Establishment, rather than FHA, is having the "last word" on details in the complex program. But the agency's minimum construction standards must be observed.

The program will pick up speed in 1950. It is hoped a large volume of rental construction can be contributed to alleviate deplorable housing conditions at many installations.

ELECTRUNITE E.M.T.

...the ORIGINAL lightweight rigid steel wiring raceway

The wall thickness of Republic ELECTRUNITE E.M.T. (electrical metallic tubing) was not arrived at by guesswork! It was carefully and scientifically determined by Steel and Tubes. Subsequent tests by a recognized fact-finding board have proved that it provides adequate mechanical and electrical protection throughout the installation.

SEE SWEET'S FILE

or write us for detailed information on these Republic Steel Building Products:

Pipe—Sheets—Roofing
Enduro Stainless Steel
Toncan Enameling Iron
Electrunite E.M. T.
Fretz-Moon Rigid Steel Conduit
Taylor Roofing Ternes
Berger Lockers, Bins, Shelving
Berger Cabinets for Kitchens
Truscon Steel Windows, Doors, Joists
and other Building Products

Here's the BIG DIFFERENCE between Republic ELECTRUNITE E.M.T. and heavy threaded conduit. With threaded conduit, there must be excess metal to act as a base for threads and still leave adequate wall thickness underneath. Because modern ELECTRUNITE E.M.T. is threadless, it does not require excess metal . . . its adequate wall thickness is uniform throughout every length . . . its unbroken coating of protective zinc provides continuous protection against rust and corrosion.

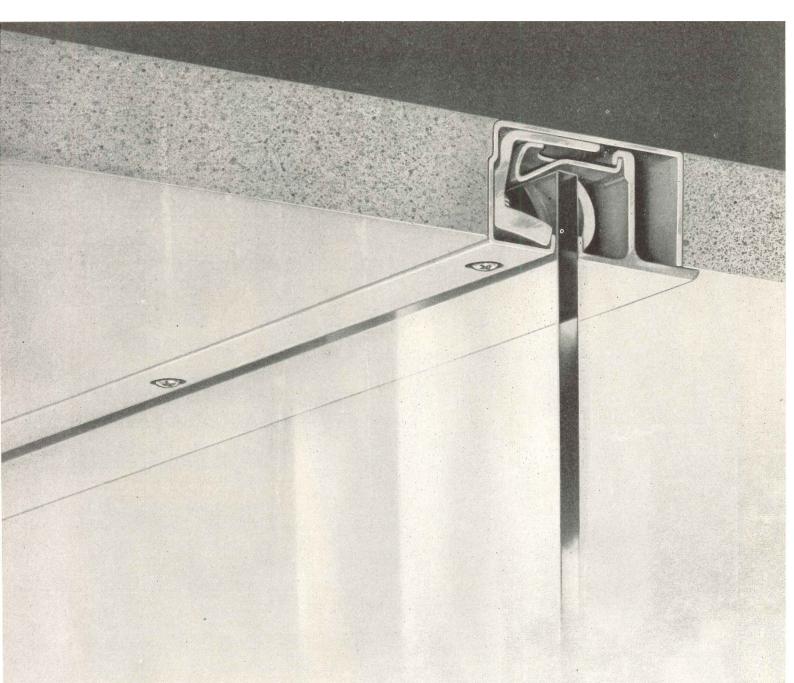

From an installation standpoint, too, ELECTRUNITE E.M.T.'s lighter weight means important cost-saving advantages: easier handling . . . easier installation in hard-to-reach locations . . . easier, more accurate bending . . . fewer delays on the job.

For raceways that are exposed, concealed or in concrete, you can't beat ELECTRU-NITE E.M.T. Get all of the facts from your nearest Steel and Tubes Representative . . . or write to:

YOU CAN MAINTAIN

HIGH ARCHITECTURAL STANDARDS

AND REDUCE BUILDING COSTS...

THROUGH THE SKILLFUL USE OF

CUSTOM-STYLED KAWNEER STOCK METALS

You can achieve all the unique distinction of customstyling—all the clean-lined simplicity of modern design—by creatively adapting Kawneer Stock Metals to your individual style.

A perfect example is this outstanding women's shop in Long Beach, California.

To increase customer traffic, Kenneth S. Wing, A.I.A., decided to create an inviting open-air atmosphere which would eliminate the usual building line barrier and put the attractive interior on display.

To achieve this effect Mr. Wing specified Kawneer Patented Flush Glazing Sash, one of the many modern Kawneer Stock Metals.

The face of this sash is flush with surrounding wall and ceiling surfaces, because all projecting members are eliminated. To the eye, the surfaces on both sides of the glass appear to be a single smooth plane, continuous and uninterrupted by glazing sash.

By using such Kawneer Stock Metals you can meet your clients' demands for lower building costs—and you can reduce your own operating costs. Kawneer Stock Metals are far less costly than special, madeto-order assemblies—and they eliminate time-consuming drafting and detailing in your own office.

For information, consult your Portfolio of Kawneer Details or write 201 N. Front St., Niles, Mich.; or 2561 8th St., Berkeley, Cal.

normal atmospheric temperatures with little or no refrigeration required. The apparatus is enclosed in a casing through which air is drawn by fans. Air is filtered, then dehumidified by passing through a spray of Hygrol. The air stream next

passes cooling coils and moisture eliminators, and is diffused in the space to be conditioned.

The absorbent liquid spray falls into a tank at the base, is piped to a concentrator to remove moisture taken from the air, and returned to the system. The equipment is manufactured in a wide range of sizes. Niagara Blower Co., 405 Lexington Ave., New York 17, N. Y.

Fire-Resistant Fabric

A fire-resistant drapery fabric, woven of Fiberglas and wool yarns, has been developed by the textile division of Knoll Associates from a hand loomed design by Marianne Strengell. The material is said to meet rigid fire-safety requirements for use in places of public assembly, and to drape well. Sunlight, gases in the atmosphere and mildew are reported not to affect the fabric, nor do changes in temperature and humidity. It is available in four two-tone tweed effects: green, blue, red or black in combination with natural, and in natural. Owens-Corning Fiberglas Corp., 16 E. 56th St., New York 22, N. Y.

Structural floor serves as heat ducts

for roof or floor fills fills lightweight...insulating

Use concrete made with Waylite aggregate for roof or floor fills. Reduces deadweight. Has high thermal insulation and sound-deadening values. Incombustible. Easily placed, especially around pipes and conduits.

Waylite is a lightweight air-cell aggregate made by processing molten blast furnace slag. It is a uniform material that comes properly graded. Recommendations for its use are supported by a wealth of technical data and by widespread, successful use on various types of structures. Approved by Board of Standards and Appeals, New York City.

In addition to fills, Waylite aggregate makes light-weight structural concrete that saves as much as 35% deadweight and can be designed up to 4000 psi. See Sweet's for engineering data. For further information and quotations, address the Waylite Co., 105 W. Madison St., Chicago 2, or Box 30, Bethlehem, Pa.

Heating With Cellular Floors

Fenestra steel cellular panels were installed in the Ideal Home of the 1950 Detroit Builders' Show as both subflooring and heating ducts. Panels were laid from beam to beam, eliminating joists, and joined by an interlocking feature. Use of these units is said to permit faster, easier construction of subflooring.

Panel cells serve as ducts for hot air distribution and cold air return. Heat is radiated through the floor, and flows out of baseboard registers. With such construction, the basement ceiling is flush and requires no finishing. Cutting of panels around openings is reported a simple operation on the job. Pipes and wire can be enclosed in the panel cells. Detroit Steel Products Co., 2250 E. Grand Blvd., Detroit 11, Mich.

and bathroom fixtures is announced for the moderate price field. The kitchen line comprises gas and electric ranges, a series of sink and cabinet combinations, floor and wall cabinets and flat-rim sinks. The equipment is of welded construction throughout and is available with a wide range of fittings and features.

Bathroom fixtures include corner and recess bathtubs and open base or cabinet base lavatories. Bathtubs are said to be lightweight, and of an acid-resisting porcelain. Fixtures are made in white, blue, green, sandstone and ivory colors. Murray Corp. of America, Home Appliance Div., Scranton, Pa.

Room-Size Rugs

Based on a survey of average room sizes throughout the U. S., a new line of broadloom rugs, called *Floor-Plan Rugs*, is available in 20 sizes, ranging from 27 by 54 in. to 12 by 21 ft. The plan is said to allow cheaper cost and quicker delivery than special tailored carpeting. The line is made in 12 solid colors in a nubby twist weave, 16 patterns of multicolor designs, and 12 patterns of tone-on-tone textures. Alexander Smith & Sons Carpet Co., 295 Fifth Ave., New York, N. Y.

Wiring duct holds fixtures at any point

Flexible Display Lighting

A standardized and prefabricated wiring system has been designed, adapting the Bulldog Trol-E-Duct for store and display illumination where frequent changes in lighting layout are needed. The duct is said to be easily and quickly installed, and allows flood or spot lights to be snapped on at any point in the duct without any new electrical work. Lighting units may be beamed in any direction required, and rearranged at will. Several models are available, in four standard colors or brushed aluminum. Fixtures may be ordered as required. General Lighting Co., 1527 Charlotte St., New York 60, N. Y.

New Wood Product

A new hard board sheet, developed to utilize wood wastes, is made by compressing a blend of wood shavings, chips, and ground wood, all bonded by a Plaskon urea formaldehyde resin.

Wonderboard is reported to have a distinctive warm appearance, being comprised of any combination of wood particles. Reputed qualities include: lightness; non-warping; resistance to fungus, dry rot, termites and fire; strength adequate for a structural material; water re-

(Continued on page 190)

AFTER 30 YEARS OF CONSTANT USE!

Stairs get a lot of punishment in 30 years under the thousands of busy feet which go up and down them—year in, year out. Yet this unretouched photograph (just taken) of the "Feralun" stair treads, installed 30 years ago in the plant of the Dennison Manufacturing Co. at Framingham, Massachusetts, shows no evidence of more than a quarter-century's "foot traffic." 30 years of resistance to wear! 30 years of non-slip underfoot safety! Good for many years to come!

Examples like this show why architects, engineers and builders insist on "Feralun"* treads, nosings and plates. Made of cast iron with wear-resistant abrasive particles embedded in walking surfaces, "Feralun" provides a sure-footed "grip" that keeps feet from slipping—and wears and wears. The coupon below will bring you full information on "Feralun." Send it today.

sistance; insulation for both sound and temperatures; and adaptability for veneering. Standard sizes of the new board will be 48 by 96 in. and $\frac{1}{4}$ to $1\frac{5}{8}$ in. thick. Wonderwood Corp., Corona, Del Mar, Calif.

TV Antenna System

A multiple-outlet TV antenna system, called *Antenaplex* has been designed to meet the problems of apartment houses, hotels, office buildings, etc. The system consists of a roof-top antenna for each channel to be received; a master signal amplifier to boost the strength of signals received; and a co-axial cable carrying all signals to outlets throughout the

building. Each system is specially engineered for a building, with antennas individually tuned to a particular channel. Receivers are electrically isolated from others in the system. These features are said to insure maximum signal strength and eliminate ghost images caused by signal reflections from other buildings. RCA Victor Div., Radio Corp. of America, Camden, N. J.

Door control uses no motors or gears

Automatic Door Opener

With the Astra Automatic Door Control, opening of door is electrically actuated by walking on a $\frac{3}{16}$ -in. floor plate either side of door. The plate has low-angle rising edges for safe, smooth approach. No guide railing is necessary. Opening and closing of doors is air operated and hydraulically controlled, requires no motor or gears. Air power may be supplied by the building's regular air pressure system or by a small compressor. In case of a power failure, doors may be manually operated.

Designed especially for public and industrial buildings, the doors are said to be economical, easy to maintain, and can be installed without remodeling doors, walls or floors. Astra Engineering Co., 933 S. Fair Oaks, Pasadena, Calif.

Multi-Outlet Strip

The *Plug-In-Strip* provides electrical outlets at either 6 or 18 in. intervals. In addition to the conventional two slots in each receptacle, there is an adjacent third slot with a copper insert mounted to the steel base for grounding to the earth. This construction allows the use of either a standard plug or the series 5200 3-blade grounding plug.

The strip is of 24-gage steel channel, (Continued on page 192)

Eighteen Beams Concentrate Glareless, Shadowless, Comfortable Light on the Operating Area...

The Holophane Major Surgery Lighting System consists of 6 triple CONTROLENS* units with eighteen light beams which converge to provide (1) a high intensity spot on the operating area (2) a wider area of gradually diminishing light over the entire table (3) correct degree of balanced general illumination throughout the surgery . . . The light on the operating table is without glare, interfering shadows or objectionable heat . . . Location of the lighting system remote from the anaesthetization zone eliminates hazards of explosion; multiple lamping minimizes danger of interruption from lamp burnouts . . . The system is economical to maintain, easy to keep clean. Built-in ceiling arrangement gives the entire room a neater, more modern appearance.

and comes in 6-ft standard lengths with satin grey finish. It may be painted to match counter, machine or baseboard. National Electrical Products Corp., Chamber of Commerce Bldg., Pittsburgh 19, Pa.

All-Weather Window

Solar Air-Flo Window units combine fixed glazed areas with louvered sections for ventilation at top, bottom or sides. The complete unit comes assembled and ready to install with all exterior trim furnished by the manufacturer.

The ventilator section includes builtin screens, removable from the inside. A door serves to control and direct the flow of fresh air. The unit is weather stripped and insulated, and is said to be repellent to cold, rain and snow. Window areas are single, double or triple plate glass as desired, with narrow mullions and trim. Frames are of treated wood or extruded aluminum. A variety of stock sizes is available. Solar Air-Flo, Inc., Elkhart, Ind.

Baseless range permits custom-planned working height and storage arrangement

Kitchen Range

The Akron electric range with the cooking units at the side of the oven is designed to fit in with varying architectural needs. It is designed to be mounted on a cabinet of architect's or designer's choice. The range, model no. 436–56, is adaptable where built-in features or saving of kitchen space is desired, according to the manufacturers.

Available in stainless or regular steel the range comes complete with seven switches, pilot light on burners, appliance receptacle and automatic time and temperature controls. The base is $57\frac{1}{4}$ by 30 in.; the cook top $10\frac{3}{4}$ in. high, and the oven top $22\frac{1}{4}$ in. high. Associated Products, Inc., 20 S. Ontario St., Toledo, Ohio.

Built-Up Aluminum Roofing

Rey Kool roofing is constructed of a 17½-in.-wide sheet of stipple-embossed aluminum, factory laminated to one side of a 36-in. width, 15-lb, asphalt roofing felt. Laid according to conventional practice, succeeding courses are lapped over exposed felt and ½ in. of the aluminum. This provides a double layer of protected felt.

Features of the use of aluminum include insulation qualities and fire resistance. Factory lamination of the aluminum and felt is said to provide a better weather seal and save time and labor on the job. The roofing comes in 40-lb rolls containing 72 lineal ft. Reynolds Metals Co., Building Products Div., 2000 S. Ninth St., Louisville, Ky.

Possibilities Unlimited

Of all building materials, only Medusa White Portland Cement lends itself to unlimited possibilities in modern design and color. The plasticity and extremely white color of this cement open up an endless choice of shapes, finishes, and colors. In practically every civilized country, Medusa White is creating large stucco buildings of distinction, as well as charming white or tinted stucco homes. You'll also find this original white cement in the colorful matrix of beautiful terrazzo floors . . . not only in buildings but in home vestibules and recreation rooms. In addition, this white cement is creating cast stone for building trim, sculpture work, white concrete, and concrete slabs. Medusa White, with waterproofing ground in at the mill, becomes Medusa Waterproofed White Portland Cement and repels water at the surface of the construction. We have prepared two booklets. "A Guide to Finer Stucco" and "Medusa White Portland Cement," to show you how to build better with this modern building material. Write for them. the new Model 31 Barcol OVERdoor equipped with the newest Barcol Electic Door Operator and Radio Control. See why these quality products are worth considering for every new or remodeled up-to-date home.

FACTORY-TRAINED SALES and SERVICE REPRESENTATIVES in PRINCIPAL CITIES

Low Cost Door Check

The Dynamatic door closer is claimed to be more compact and cost less than other well known types. Designed to control interior doors weighing from 15 to 175 lb, the unit, according to the manufacturer, will never need any maintenance, spring adjustment, ratchet wrench, or any oil or grease application. According to the manufacturer, it is permanently set by one finger tip adjustment, is sealed against dirt and moisture, guarded against rust, and never affected by pressure, friction or temperature changes. New England Manufacturing and Supply Co., 42 Church St., New Haven, Conn.

Classroom uses new seating units arranged on an arc for good visibility

Lecture Room Seating

Designed to save space and increase seating capacity in lecture rooms, Universal tables and swivel chairs have simple and sturdy construction. Tables may be installed in straight rows or on an arc, with ends mitered. Tops are heavy, cored plywood, bonded with hotpress, urea-resin adhesive, and have tongue-and-groove hardwood framing. They are said to offer great resistance to warping, checking, splitting, moisture and temperature change. Pedestals are steel with an offset flange mounting of cast iron providing ample leg and knee room. The pedestal fastens to the top with screws through flange arms extending the width of the table. Finished in lacquer, the tables are 29 in. high, 16 to 24 in. wide; lengths are available as desired, usually in two-pupil sections.

The swivel chairs are designed to permit a wide alley of access. Both tables and chairs have circular base plates for attachment to the floor. American Seating Co., Grand Rapids 2, Mich.

for the people

FOR the people is this handsome Memorial Auditorium with its attractive terrazzo floors and stairs. For the people also is the permanent, non-slip protection given these floors and stairs by the use of ALUNDUM terrazzo aggregate.

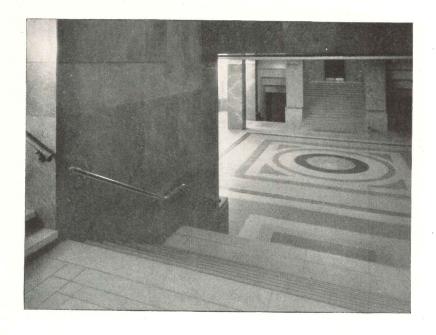

ALUNDUM terrazzo aggregate will give any terrazzo floor or stairway two added advantages: positive, permanent, non-slip protection even when wet, and greatly increased wear resistance.

For the people are the non-resonant and comfortable walking qualities of ALUNDUM terrazzo floors. Available in a wide variety of colors, ALUNDUM terrazzo aggregate combines attractiveness with its non-slip protection and wear resistance.

For lobbies, foyers and entrances, and for ramps and precast stair treads, you can combine commonsense with good taste and add safety to attractiveness by using ALUNDUM terrazzo aggregate.

See our catalog in Sweet's (SA and SE) or write for our free catalog, number 1935.

Other Norton non-slip floor products are Alundum aggregate for cement floors, Alundum stair and floor tile, and Alundum ceramic mosaic tile. All of these serve the public by making your floors, ramps or stairs permanently non-slip.

Plastic Asbestos Flooring

Terraflex floor tiles, 9 in. square by ½ in. thick, are available in 12 marble-ized colors. Reportedly, they do not fade or change with use, and are unaffected by grease, oil, alkaline moisture and mild acid solutions. The tiles are applicable over any type of base, and are said to be flexible enough to conform to unevenness in floor or normal building movement. The marbleizing goes all the way through the tiles for long wear. Johns-Manville, 22 E. 40th St., New York 16, N. Y.

Flexible wall lamp adjusts for height

Lighting Fixtures

Four new lamps designed by Greta von Nessen feature extreme flexibility. Swivels and extensions allow adjustment for both angle and height. The group includes two floor lamps, a wall lamp and a table lamp. All are simply designed. Satin chrome is used for arms and bases; natural cherrywood or rosewood for bases; frameless plasticized fabric, glass fiber and spun aluminum for shades and reflectors. Nessen Studio Inc., 40 E. 21 St., New York, N. Y.

Wall and Ceiling Panels

Marlite plastic-finished wall and ceiling panels now include 10 new wood (Continued on page 198)

Only Revolving Discharge Can Provide Thorough Heat Circulation in Industrial Plants

Wing Revolving Unit Heaters give more uniform heat distribution in any building. But it is recognized that many standard industrial building designs present serious heating difficulties because of height, peculiarities in shape, exposure, or bulky equipment installations. Buildings of this type cannot be heated satisfactorily by stationary discharge unit heaters which focus streams of heat at one or more fixed points. The limited coverage provided by such heaters makes necessary a larger number of units — resulting in too great a concentration of heat, and prohibitively high original cost.

Wing Revolving Discharge Outlets Turn Slowly Through a Complete Circle

WING Revolving Heaters are specifically designed to overcome the limitations of stationary discharge unit heaters, and assure the thorough distribution of warmth required for proper, healthful plant heating. The discharge outlets of the Wing Revolving Heater move slowly through a complete circle, covering successively every direction with gentle, invigorating warmth. Because the heated air is constantly circulating in different directions, all working areas are thoroughly covered, even to the most remote corners. Uniform, comfortable, healthful temperatures over the entire plant area are assured. Investigate Wing Revolving Heaters for your next design by writing today for your copy of Wing Bulletin HR-5.

WANSON

9, rue Mogador, Paris 9e, France 222, rue Royale, Brussels, Belgium

Highly dramatic, carefully planned, the Prudential Insurance Company's new Western home office now brings another example of modern workability to the Southern California scene. Realizing the need for a modern, flexible wiring system that matched the workability of the building itself—Wurdeman & Becket, architects, specified a G-E Fiberduct raceway system. This triple-duct system utilizes approximately 80,000 feet of G-E Fiberduct raceways, and supplies three completely separate channels for telephone, signal, and electrical distribution. It provides for immediate wiring changes as personnel are moved, partitions shifted, and business machines and phones are added.

Tomorrow's electrical demands won't find the new Prudential building wanting. Its system of General Electric Fiberduct underfloor raceways will provide complete electrical flexibility in the years to come. When new outlets are needed, when distribution changes are necessary, this underfloor system can provide these facilities at any time.

General Electric Fiberduct raceways give building management complete freedom of floor arrangement, because they permit the installations of outlets at any point along the duct line—at any time during the life of the building. These nonmetallic raceways provide ample capacity for future electrical requirements. In monolithic or slab and fill type of construction they provide an over-all raceway pattern that makes circuits available throughout the floor area.

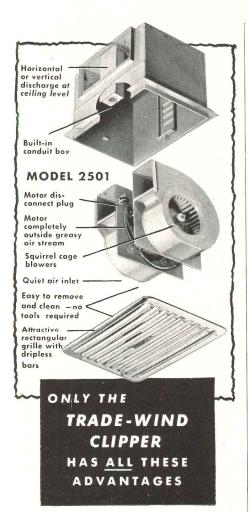

To provide a new outlet it is only necessary to make a small opening in the floor over the raceway, pull the wires through, and install the outlet. New distribution can be added simply by pulling wires through the ducts. It's as quick and easy as that—the job is done at low cost with no interruption of the building's facilities.

Get complete details on G-E Fiberduct

We've prepared a new 80-page book that gives the complete G-E Fiberduct story. It's packed with the facts you'll want to know—wiring diagrams, installation details, descriptions, and other valuable information. To get your free copy fill in and mail the coupon below.

FOR the best method of ventilating kitchens, bathrooms, laundries, dens or other small rooms specify and install the Trade-Wind Clipper. This proven ventilator is the only small room unit that gives the home owner every worthwhile advantage.

Squirrel cage blowers, accepted and used in air conditioning systems and for forced air heating, are used exclusively in the Trade-Wind Clipper. This forced air discharge, located at the ceiling, traps all unwanted air and expels it instantly. Trade-Wind also has located the motor completely outside the greasy air stream. The motor stays clean indefinitely - requires far less service — and is guaranteed for 5 years. No other small room ventilator combines all these outstanding advantages. In addition, Trade-Wind Clippers are easy to installthey are competitively priced*-and they make every new owner another salesman for the Trade-Wind line.

Get the complete story from your local supply source, or mail the coupon today.

and marble patterns. Five of the patterns reproduce the grain and finish of wood: quartered Prima Vera (harewood gray or natural), walnut, oak, and striped mahogany. Panel sizes are 48 by 72 in. or 48 by 96 in.

Panels of the marble patterns are 32 by 48 in. and 96 by 48 in. The panels are said to be dirt, grease and moisture proof, and may be applied over any wall surfaces in new or old construction. Marsh Wall Products, Inc., Dover, Ohio.

Combination Window Unit

Insulex Unit Fenestration combines light-directional glass block and a conventional double-hung window in a single prefabricated unit. The glass block is said to diffuse and reflect light over the room and to reduce glare, contrast and the need for shading devices. Two types of prismatic block are available, each reputed to have the same thermal insulating value as 8 in. of brick — No. 351 for ordinary conditions and a special design for severe sun exposures. The lower clear glass portion can be raised for ventilation.

The unit is available in sizes to 4 ft 8 in. by 10 ft 2 in. max., and can be installed like ordinary double-hung windows in single, multiple or continuous units in new construction or to replace worn-out sash. American Structural Products Co., Toledo 1, Ohio.

Aluminum Siding

New features incorporated in the design of Kaiser Aluminum clapboard siding include: wide flat at top edge for more contact at joint; upper half flattened for greater wall contact; lower section curve increased to prevent buckling; joint housing deepened for easier fitting; and nailing slots moved closer to lower edge for easier installation.

The siding is said to have a weather tight tension seal, long life, freedom from rust and reflective insulating qualities. Courses are $7\frac{7}{8}$ in. with a weather exposure of $6\frac{7}{8}$ in. Made in both .030 and .025 gages, it is available in 10-, 12-, 14- and 16-ft lengths. Kaiser Aluminum & Chemical Sales, Inc., 1924 Broadway, Oakland, Cal.

(Continued on page 200)

Naval Medical Center, Bethesda, Md. Minwax Weathercap used to protect masonry joints.

There's more to WATERPROOFING than meets the eye

• There are two types of waterproofing problems . . . preventive and corrective. When a building is intelligently waterproofed during construction, it enjoys long-term (often permanent) freedom from expensive water damage and corrective treatment. The architect shares in the owner's satisfaction.

During the past 42 years, many prominent architects, designers and contractors have made Minwax their Waterproofing Information Headquarters. Minwax Waterproofing Products have served thousands of their clients on schools, libraries, churches and other masonry structures. They look to Minwax for expert advice, recommendation of qualified contractors, and quality waterproofing materials.

When you have a waterproofing problem, why not call on Minwax? There's not the slightest obligation. Minwax Company, Inc., Dept. AR-2, 11 West 42nd Street, New York 18, N. Y.

GLASS MAKES ITA VISUAL FRONT

accent
the invitation
of a
VISUAL FRONT

Visual Front design is based on the principle that when people can see in—more come in.

What better place to remove barriers to visibility than in entrance doors? That's just what Tuf-flex* doors are for. They're clear plate glass, 3/" thick, tempered to withstand impact and general rough treatment. They give you an opportunity to design for smart appearance—and for practicality.

All Tuf-flex glass doors are furnished complete, equipped with cast bronze or alumilited aluminum fittings, which are designed to receive standard pivot hinges and other builders' hardware. Tuf-flex doors are available in a variety of designs and hardware finishes to meet your requirements.

Tuf-flex doors are widely used in many places other than storefronts. Their transparency and smart design make them ideal for public buildings, offices, apartments, hotels, hospitals, banks, and many other uses.

Get in touch with an L·O·F Distributor for full information on *Tufflex* doors—sizes, hardware, installation details. And write us for our illustrated *Tuf-flex* book, plus our A.I.A. File Folder on design details.

Dumb Waiter

The Sedgwick Under-Counter Dumb Waiter, of all-metal fireproof construction, comes in a complete and self-contained unit. It is designed for capacities up to 300 lb and is suitable for fountain service, back-bar, or other scant headroom conditions.

The compact unit is said to be easily installed; usually employs a car about 24 in. wide, 20 in. deep and 26 in. high, fitted with a removable shelf. A hand crank is provided. Sedgwick Machine Works, 90 Eighth Ave., New York 11, N. Y.

Plastic Wall Tile

Skyline Over-Lock plastic tiles feature a locking edge which reportedly permits each tile to be quickly and firmly locked into place. Tiny perforations in flanges force cement through to the adjacent tile for a strong bond. Between tile grouting is unnecessary.

The tiles are supplied in several shapes, including inside and outside corners, half tile, feature strips and cove bases. Finishes include marbleized, mother-of-pearl, standard and pastel colors. Surfaces are highly glazed and said to be resistant to scratching, impact and most household corrosives. The lightweight, washable tiles have beveled edges and require no metal mouldings. Skyline Industries, Titusville, Pa.

Compact Garbage Disposer

The National Shorty disposer, model 35-CS, is designed 5 in. shorter than the standard model for connection to most wall wastes without major plumbing changes. The new unit roughs in at 18 to 19 in. from the floor line and $8\frac{1}{2}$ to 9½ in. below the bottom of the sink bowl. Overall length is 15 in.; weight is 36 lb. It is equipped with a high-torque 1/3 hp motor, and includes such features as one-piece safety cover control, optional flow interlock, and a quickly demountable and interchangeable power unit for easy installation and service. Appliance Div., National Rubber Machinery Co., Akron, Ohio.

New screening device keeps hottest rooms cooler!

Thin louvers set close together at an angle against the sun make Kaiser Aluminum Shade Screening the lowest cost screening and cooling device you can put on a window!

It deflects sun's hot rays without blocking the view. Thus, hottest rooms are as much as 15° cooler, yet light and airy.

PRECISION PRODUCED from tough, high grade aluminum. Can't rust or stain. Never needs paint. Adds extra beauty to any window, extra value to any home.

PROTECTS INTERIORS against sun fading. Low in cost. Easily installed. Keeps out insects. Available from sash and screen manufacturers and building material jobbers.

Write for free AIA file. Kaiser Aluminum Shade Screening is produced by Kaiser Aluminum & Chemical Corporation.

NOW!

NEW!

For two 96" T-12 Slimline lamps, single unit or continuous installations. For suspension mounting, listed with 8"and 28" "A-J"Adjustable hangers.

DAY-BRITE'S

"DECIDEDLY BETTER" SLIMLINE

Once in a blue moon, a truly great fixture makes its appearance. Now, after years of research and designing, the matchless new Day-Brite "LUVEX" is ready.

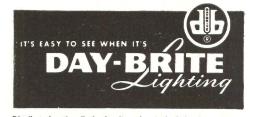

All the usual advantages of Slimline, of course — instant starting . . . extremely high efficiency.

But then, add these "LUVEX" extras—sturdy, no-sag, heavy gauge steel chassis, enclosure and louvers completely interlocked into a rigid one-piece unit, quick, easy installation and smart appearance—and the "LUVEX" is absolutely everything you expect of Slimline lighting.

Maintenance? Simple! So simple, in fact, that

the "LUVEX" can be relamped and cleaned without disturbing a single part of the fixture—without so much as touching a latch, chain, nut or bolt!

Get the full "LUVEX" story. It will pay you to know all the facts about this remarkable new Day-Brite development. Write today for Bulletin 10-M.

Above, a section of Glen Oaks Village in Bellerose, Long Island, N. Y. Celotex Insulating Sheathing was used throughout in this beautiful garden-type development which comprises 3800 modern apartments. Built by Gross-Morton of Jamaica, L. I., N. Y. Architect: Benjamin Braunstein.

*

New 3800-apartment development insulated throughout with

CELOTEX INSULATING SHEATHING

More and more architects and builders across the nation are specifying Celotex Insulating Sheathing, instead of ordinary sheathing. Because this strong *rigid insulation* enables you to build better, more salable homes at *lower cost*. No other gives you all these important advantages and economies:

First, Celotex Insulating Sheathing saves you money on both materials and labor, because it insulates, builds and moisture-proofs, all at one low cost! Quick and easy to apply. Negligible waste. No building paper needed.

Second, Celotex Insulating Sheathing seals out excessive heat in summer. In winter, it cuts heat leakage through sidewalls, where authorities say most heat loss occurs. Thus, it assures a home that's far thriftier to heat, far more comfortable the year 'round.

Third, Celotex Insulating Sheathing is the only sheathing made of long, remarkably strong Louisiana cane fibres. It is treated inside and asphalt-coated outside to make it double-waterproofed, yet it has more than twice the vapor permeability advocated by government agencies. And it is protected against dry rot, fungus and termites by the exclusive patented Ferox Process.

Yet to insulate and moisture-proof as you build with Celotex Insulating Sheathing costs no more than uninsulated construction! Send now for booklet giving full technical details.

NOTE. Celotex Double-Waterproofed Insulating Sheathing used in combination with Celotex Insulating Lath, the superior plaster base, is the thrifty way to build the "Ideal Wall"—a stronger wall structure with BUILT-IN insulation! Write for details.

There's only one genuine

Saint Clare's Hospital, Schenectady — equipped with Castle Sterilizers and Lights

Another complete installation of Castle Equipment is contributing its part in the daily protection of the patients in this splendid new hospital.

The carefully planned arrangement of facilities and their application sets a new pattern of practical efficiency for the Sterilizing Divisions of this hospital.

Castle Engineering Service is available to you if you are contemplating any improvements or changes to your institution. Suggestions are free and are based on more than sixty-nine years of continuous service in this critical field. Write: Wilmot Castle Company, 1258 University Ave., Rochester 7, N. Y.

Castle lights and sterilizers

When Specifications Call For SQUARE Air Diffusers

You Can Install ACLEMOSTATE ARE DIEBUSES

When air diffuser specifications read "square", you can now give your customers the new square Anemostat Air Diffusers. They offer the same aspiration effect—the same draftless, uniform distribution of air — as the circular Anemostats. These new Square Diffusers, protected by patents, assure complete air diffusion over a full 360° area.

The new square Anemostats are available in two basic models. Type E fits without modification into the framework that holds standard size acoustical and egg crate ceilings. Type E-1 is flanged to cover the

opening in a regular ceiling.

The simple snap-on method of installing these new square Anemostat Air Diffusers will save you time and labor. Both inner assembly and equalizing deflectors are just snapped into place.

Now you can install square — as well as circular and semi-circular Anemostat Air Diffusers — and be sure of top-quality performance. For full information on the new square Anemostat, write for Bulletin 29A. Bulletins on other types of Anemostats available on request.

ANEMOSTAT®

DRAFTLESS Aspirating AIR DIFFUSERS

ANEMOSTAT CORPORATION OF AMERICA
10 EAST 39th STREET, NEW YORK 16, N. Y.
REPRESENTATIVES IN PRINCIPAL CITIES

"NO AIR CONDITIONING SYSTEM IS BETTER THAN ITS AIR DISTRIBUTION"

AC 1239

ANEMOSTAT

OFFERS COMPLETE CIRCULAR DIFFUSION from a square outlet

This unretouched smoke test photograph shows how the new square Anemostat diffuses air completely over a 360° area.

Only Anemostat provides effective aspiration

Due to its special design, the Anemostat distributes air of any duct velocity in a multiplicity of planes traveling in all directions. Simultaneously, the unit creates a series of countercurrents traveling toward the device which siphon into the device room air up to 35% of the supply air depending on the type and size of the unit. This room air is mixed with the supply air within the Anemostat before the air mixture is discharged into the enclosure.

"Those midgets haven't lost a game

since I showed 'em how . . .

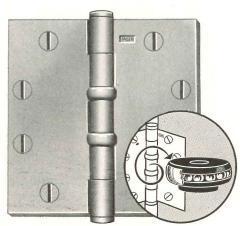

Everything Hinges on Hager!"

The WEIGHT Swings on HARDENED STEEL...Not BRASS!

Knuckle weight is functionally engineered on Hager Ball Bearing Butts to lie against special hardened steel top races. The brass cup, which contains the races and the ball bearings, supports no weight... is subject to no errosive friction that may later wear out or impair performance.

Highest quality chrome steel balls allow the knuckle to glide smoothly and evenly over tempered steel races. Leaves are beveled at the joint. Trim, square outer edges are finely milled sharp and clean.

Specify Hager "BB" Butts on jobs calling tor average frequency door service. Hager Frictionless ball bearing gliding action permits even the heaviest doors to silently float back and forth.

HAGER BB 1193 FBT BRASS BUTTON TIP BALL BEARING BUTT For added beauty and permanent trim appearance, specify all-weather non-corrosive solid brass butts.

Some ideas on the use of Glass in today's residences

TRANSFORMING dull, passive rooms into bright, expansive, warm interiors. You can do that with Pittsburgh Mirrors. Moreover, they have the ability to increase the apparent size of small rooms. A wall covered with floor-to-ceiling mirrors can often solve a perplexing decorating problem. Pittsburgh Mirrors are obtainable in a variety of sizes and shapes—Venetian, or with modern or Period frames to

conform to any scheme. They're available in a range of colors, and with silver, gold or gunmetal backing. Architect: Henry W. Johanson, Roslyn,

New York.

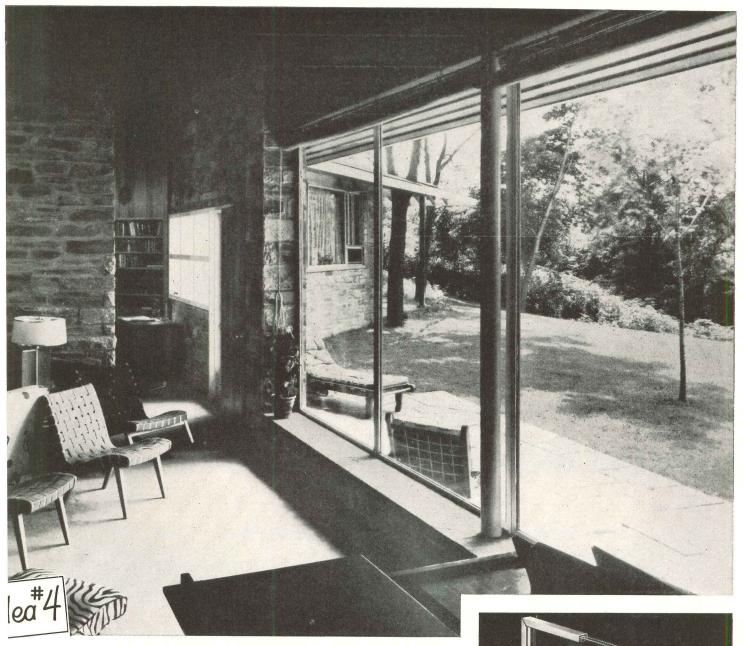

DAYLIGHT IN ABUNDANCE. There are some places in the home where this is wanted, but privacy must be assured, too: In bathrooms, entrance-ways and stairwells, for example. Pittsburgh Corning Glass Blocks are ideal here, because they meet these two requirements fully. What's more, they are actual moneysavers for your clients. Their insulating properties cut heating bills and they hardly ever need repairs or replacement; never require painting.

Idea

PERMANENCE AND BEAUTY are what home owners want. Those are important reasons why so many of the country's foremost architects specify "the *quality* structural glass"—Carrara. It's an ever-lasting product—finely-machined and easily handled. Its joints are true and even. It's adaptable and versatile. It's impervious to moisture, acids, grease and pencil marks—the ideal material for bathroom and kitchen walls. There are ten beautiful Carrara Glass colors to choose from. Architect: Henry W. Johanson, Roslyn, New York.

TO FRAME THAT VIEW of the garden, road, pond or distant hills and make it a living picture for enjoyment from inside the house. Here Twindow, Pittsburgh's window with built-in insulation, is the logical answer. Twindow units are flawlessly transparent; have exceptional surface beauty. Architect: J. P. Trouchard, Washington, D. C.

TWINDOW is made up of two or more panes of Pittsburgh Polished Plate Glass, enclosed in a protective, long-lasting stainless steel frame. The hermetically-sealed air space between the panes offers effective insulation—minimizing downdrafts, cutting heat losses through windows, reducing condensation. Forty-five standard picture window sizes are available and are adaptable for either wood or steel sash. Twindow is another example of the extensive Pittsburgh research which helps to solve architectural problems by supplying materials that will produce better jobs.

The Inspiring Life Story of a Great Contemporary Architect . . .

"Marcel Breuer: Architect and Designer" by PETER BLAKE

"In addition to being a most accomplished artist in his own right, Marcel Breuer has formed a link between the turbulent days of the early twenties, when many of the technical and esthetic ideas that have produced the new architecture were first formulated, and the present day with its increasingly widespread acceptance of those ideas in this country and abroad. This book is an attempt both to document Breuer's own work and to emphasize the main points in the message he is trying to convey."

Peter Blake Curator of Architecture and Design, Museum of Modern Art.

PETER BLAKE'S "Marcel Breuer: Architect and Designer" is that rare publishing achievement — a biography which captures wholly the essence and spirit of its subject.

The essential meaning of Breuer's career is made clear in this significant and well-documented book as his life and works are traced from his initial contributions to architecture and design at the famous Bauhaus School in Germany to the present time. Considerable space, incidentally, is devoted to the Bauhaus experiment under Walter Gropius which has been responsible for so many notable advances in architecture and design.

Includes Many Reproductions

Fortunately, the author realized that actual reproductions of Breuer's work would explain his growth more graphically than words. Thus, the book is profusely illustrated with plans, drawings and designs made at every stage of

the architect's career. In all there are 196 illustrations, giving fascinating glimpses of Breuer's talents in action; showing his increasing interest in architecture, as distinguished from furniture design, and his later pre-occupation with American techniques. The illustrative material includes not only Breuer's designs, but also the works of those who inspired him: the expressionists, Kandinsky and Klee as well as the rationalists, Maholy-Nagy, Albers and Gropius.

It is inconceivable that anybody could read Peter Blake's book without learning a great deal. But instruction is not its main concern, nor does it account for the book's intrinsic charm. That charm, rather, lies in its magical unfolding of the drama of a great human being — in the development of a talent which ripened with each new challenge. Whether you read "Marcel Breuer: Architect and Designer" out of professional interest or for sheer enjoyment, your time will be well invested. Handsomely bound in stiff, cloth binding, distinctively illustrated, this 128-page book will be an important new addition to your library.

To obtain your copy, simply fill in and return the coupon below. Just off the press, printed in a limited edition, the book is now available to you at the price of \$4.00, including postage.

A total of 2200 Roddiscraft Solid-Core Flush Veneered Doors are in use at the United States Navy Medical Center in Bethesda, Maryland.

Roddiscraft Solid-Core Flush Veneered Doors are included in the permanent equipment of the modern Mercy Hospital in Rockville Centre, New York.

The new building of the Nassau Hospital, Mineola, New York, has Roddiscraft Solid-Core Flush Veneered Doors throughout.

Roddiscraft

SOLID-CORE FLUSH VENEERED DOORS PROVED IN HOSPITAL SERVICE

5 reasons why it pays to include these quality doors in your hospital construction plans

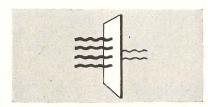

Identification and Guarantee—All Roddiscraft Solid-Core Flush Veneered Doors are guaranteed without qualification as to workmanship and materials. Inserted in the hinge rail of every door is a red, white, and blue dowel which permanently identifies the door.

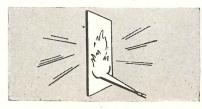

Resistance to Abuse—Roddiscraft Solid-Core Flush Veneered Doors easily withstand the punishment of heavy hospital duty. The entire door assembly is welded into a solid unit—permanently puncture-proof, waterproof, and resistant to decay.

Standard Thickness Face Veneers—Roddiscraft Standard Construction is a feature which adds to the durability of these Flush Veneered Doors. The Roddiscraft method utilizes Standard Thickness Face Veneers—as opposed to ½" and thicker veneers. Less moisture penetration — greater durability.

Sound Resistance—The high resistance of Roddiscraft solid-core construction to the passage of sound has been established by independently conducted laboratory tests. The standard 1¾" Roddiscraft Solid-Core Flush Veneered Door develops an average sound transmission loss of 30.9 decibels.

Fire Resistance—One reason why Roddiscraft Solid-Core Flush Veneered Doors are ideal for hospitals is their exceptional resistance to fire. This fact has been established by independent laboratories, where standard Roddiscraft doors exceeded the 40-minute fire test.

Both from the standpoint of utility and safety, Roddiscraft Solid-Core Flush Veneered Doors measure up to the stringent requirements of hospital planners. The service record of these exceptional doors stands as proof in itself. Every day—in new hospitals and old — Roddiscraft Solid-Core Flush Veneered Doors are providing dependable, satisfactory service. It's no wonder that more and more hospitals are turning to Roddiscraft for their doors.

Write for book —"An Open and Shut Case for the Finest Flush Doors" — giving complete details and specifications of the Roddiscraft Door line.

GENERAL ELECTRIC A BRIGHT NEW

Two new General Electric white fluorescent lamps show full beauty of all colors

Colors take on new lij

YOU'LL see colors come to life...fabrics and decorations take on new charm...complexions glow with new warmth...better than fluorescent lamps could ever show them before.

The secret is a revolutionary new phosphor,

"D-R", which, in the inside coating of two

new General Electric fluorescent lamps, transforms the effect of the white light they give. With these new lamps—1) DE LUXE COOL and 2) DE LUXE WARM WHITE—excellent color rendition is achieved, and at the same time you are given a choice of cool or warm atmosphere.

Complexions flattered

Fabrics look their best

Cool effect or warm?

Now you can plan lighting to help create either a cool or a warm atmosphere — give clients the light they desire and their surroundings suggest—with G. E.'s two new lamps.

For cool, crisp atmosphere:
DE LUXE COOL WHITE

For warm, friendly, intimate surroundings:

DE LUXE WARM WHITE

Secret is new "D-R" phosphor

It took years of research to develop the phosphor, "D-R", that made General Electric's new color triumph possible. "D-R" is the first successful "deep red" phosphor ever known.

These two new lamps are one of the greatest advances in fluorescent lighting since General Electric introduced the first fluorescent lamp in 1938. The DE LUXE COOL WHITE and DE LUXE WARM WHITE lamps will both be introduced early in 1950 in the 40-watt size, later in all other popular sizes of G-E fluorescent lamps.

For business, DE LUXE COOL

For intimacy,
DE LUXE WARM

BRINGS YOU WORLD OF COLOR

Four G-E fluorescent lamps—the two above, plus a Standard Cool White and Warm White—now meet practically all fluorescent lighting needs.

New white lamp line makes selection easy

ne whole question of *which* "white corescent lamp" to use is now simified. The two new lamps — plus to "high efficiency" lamps—create ine of four G-E white fluorescent mps that fills practically all corescent lighting needs.

CANDARD COOL WHITE ormerly 4500)—offers highest iciency with reasonable color rention. Widely preferred for most rking and selling areas.

E LUXE COOL WHITE—gives cellent color rendition with

good (but not highest) efficiency. Recommended for cool environment where the best appearance of color is essential.

STANDARD WARM WHITE (formerly Warm Tint) provides highest efficiency combined with reasonable color rendition.

DE LUXE WARM WHITE combines excellent color rendition with good (but not highest) efficiency. Recommended for warm environment where the best appearance of color is essential.

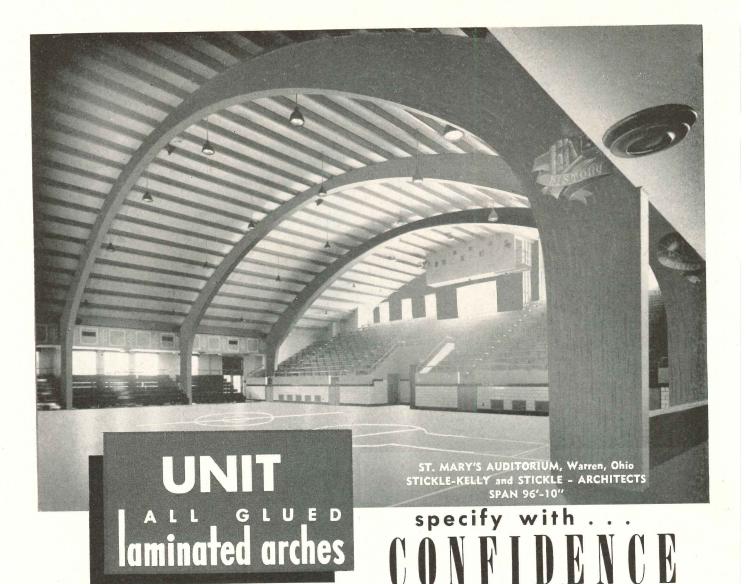

FREE SELECTOR GUIDE

GENERAL ELECTRIC

STRENGTH

"UNIT", all glued, laminated arch frames possess the high rigidity of a two piece, three

hinged arch and are, therefore, much more rigid than roof structures whose trusses and supporting columns are separate, artificially connected units.

ECONOMY

Substantial economies are achieved through savings in space and materials since the form of the arch follows the function of the building. Elimination of numerous field connections simplifies erection.

Wood, unlike steel, does not lose FIRE RESISTANCE strength when exposed to heat. The solid section of a "UNIT";

all glued, laminated arch assures maximum fire resistance and does not transmit heat thru the section. The load bearing qualities remain intact after extensive exposure to fire, allowing time to save the structure and contents . . . both material and human. This is why "UNIT" laminated arches EARN low insurance rates.!

16 PAGES IN SWEETS

File-Architectural. Look now! Select correct size arches, beams or rafters for your next project from detailed dimension tables and data. "UNIT" means a new standard in modern design and efficiency.

The laminating process

FLEXIBILITY

Patent Numbers 2177395
2172093) used in the construction of "UNIT" all glued, laminated arches, permits shaping to ANY desired form . . . a structure that will not check, shrink or warp . . . a structure offering unlimited decorative treatments.

BEAUTY

The natural beauty of "UNIT" all glued, laminated arches is

unsurpassed . . . beauty found only in wood. The decorative treatments are unlimited. Arches can be finished to match any stain sample submitted or any planned color scheme.

ENGINEERING

The pioneering background and the design and production "know-how" of "UNIT'S"

technical staff warrants your confidence! Without obligation to you, we are prepared to furnish advice and assistance in the selection and application of all glued arches and beams and prepare preliminary and final design data for special units for individual application.

An original approach to new design and use of "Unit" all glued, laminated arches is pictured in the 97' span pictured above. Arches span the length of the basketball court rather than the conventional width span.

2 NEW SPEAKMAN

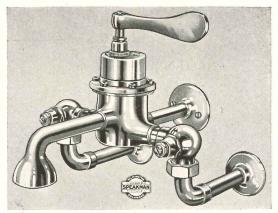

Elbow and Knee Operated

SENTINEL MIXING VALVES

S-6175 — Speakman Sentinel Knee-action Mixing Valve. Size ½". Center to center of inlets, 8 inches

s-6065 — Speakman Sentinel Elbow-action Mixing Valve Size ½". Center to center of inlets, 8 inches

Permit washing in water of a predetermined temperature that does not change due to "Water Stealing" or fluctuating water supply line pressures

Ideal for

Surgeon's Scrub-up Doctor's Offices Food Establishments

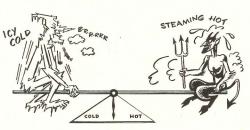

Or any other installation where it is desirable to maintain the discharge temperature with a high degree of sanitation.

Speakman Sentinel (Patented) Mixing Valves guard you against sudden changes of steaming hot or icy cold water caused by fluctuating supply line pressures. These elbow and knee operated fixtures will maintain the discharge temperature set by the user. It's all done with the F-L-O-A-T-I-N-G SENTINEL, a triumph of engineering that holds discharge temperatures steady.

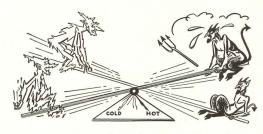

There are no tricky, temperamental springs and thermostats or other gadgets that might break down or are difficult to replace or repair. It works automatically. It works on water pressure alone.

The Floating Sentinel is easily accessible and can be quickly removed, if necessary, for inspection or cleaning without shutting off the water supply.

For further information send for folder S-56

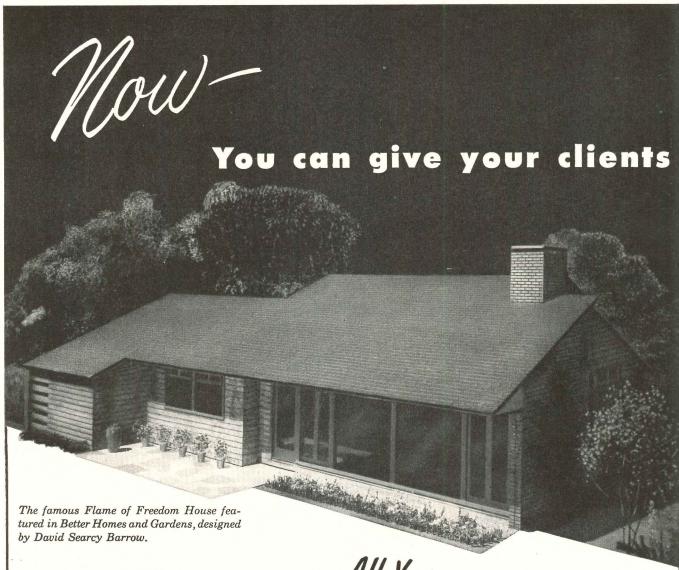

With the Sentinel Balanced Pressure Valve, discharge temperatures remain steady!

Without the Sentinel, unbalanced pressures from "water stealing" result in sudden surges of icy cold or steaming hot water.

How you can offset cost of All-Year air conditioning

By deciding to use All-Year Air Conditioning in the early planning stage, you can make enough economies to give your client year-round comfort at little or no extra cost. Moreover, the features which you would eliminate—such as a screened-in porch, fireplace, attic fan, conventional heating plant—afford comfort only for a short period of time, while All-Year Air Conditioning provides your clients with the ultimate in comfort all year-round.

NO FIREPLACE

NO STORM SASH

NO PORCH

LOWER COST
WINDOW CONSTRUCTION

NO SCREENS

NO ATTIC FAN

air conditioning at little or no extra cost!

TODAY, everyone wants the convenience and comfort provided by Servel All-Year Air Conditioning in their homes. You can provide your clients with this modern unit simply by planning your homes around a Servel Air Conditioner. Recent studies and cost estimates have indicated that you can do it without increasing the total price. The reason for this is that, by planning around a Servel unit, you gain certain structural economies which offset the price of the Air Conditioning.

For instance, a house designed for Servel All-Year Air Conditioning needs no fireplace. It needs no porch. Outside doors and windows can be kept closed and many windows need never be opened at all. That means a big saving on screens and storm sashes. In most parts of the country the total savings would more than offset the cost of the Air Conditioning.

Keep that in mind when your clients ask you about Servel All-Year Air Conditioning. Keep in comfort . . . refreshing cooling in summer and instant heat in winter. And changeover is accomplished by a mere flick of a switch.

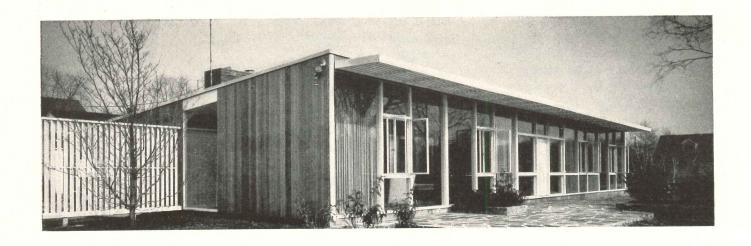

Keep in mind, also, that the use of Servel All-Year Air Conditioning is not confined just to one type of architecture. It can be easily adapted to any type, style, size, or shape of home your client wants. Remember, by including the Servel unit in the original plans, you can provide it for your client at little or no extra cost. For full facts, ask your local Gas Company, or write direct to Servel, Inc., 8002 Morton Ave., Evansville 20, Indiana.

House

... of

representatives

All here under one rooftop...the most distinguished representatives from the building field! From the linoleum in the kitchen to the insulation in the walls, the materials that have gone into the house reflect the <u>best</u> in building products. Reflect—<u>also</u>—the taste and standards of the owner-builder

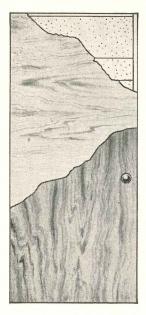

...who specified the materials in his built-to-order house. Because built-to-order houses mean more profitable orders for you, it is important to tell your story to House & Garden's owner-builders...the people of means and taste who have the power to specify your product.

FOUSE & Garden income hast publications inc. Carried Conference in the counter builder market income hast publications inc.

These Four Specialists Can Fill Almost Any Opening

No matter what your requirement . . . no matter what your budget . . . chances are a Weldwood Door can meet your needs for standard closures.

THE WELDWOOD FIRE DOOR

Here is the only wood-faced fire door on the market that carries the Underwriters' Laboratories Class B label. Architects everywhere are welcoming the opportunity to combine absolute fire protection with the striking decorative beauty available through the wide variety of hardwood faces that can be had with this modern door.

Standard faces are beautiful birch veneer. Other faces in domestic and imported hardwoods on special order.

on special order.

The Weldwood Fire Door is durable...dimensionally stable... light in weight...vermin and decay proof.

And the moderate cost indicates that hospitals, schools, institutions, offices and apartment buildings cannot afford to be without the low-cost protection of this modern fire door.

WELDWOOD STANDARD MINERAL CORE DOOR

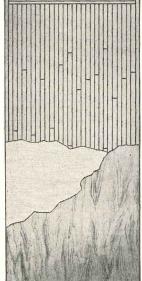

The solid mineral core of this newly developed type of standard door, plus the waterproof phenolic bond gives you a durable, versatile door that can be used either for interior or exterior openings.

When you specify the Weldwood Mineral Core Door you get a combination of advantages hard to beat. Maximum dimensional stability—this door is guaranteed against swelling and sticking in summer...or shrinking and rattling in winter. Increased utility through light weight. Increased durability because of waterproof construction.

And you can get this modern closure in a wide variety of light and louver openings, including circular, rectangular and divided lights, factory-prepared, ready for glazing.

WELDWOOD LUMBER STAVED CORE DOOR

Unusual versatility makes this new addition to the Weldwood line a favorite with architects everywhere. Because of its solid lumber staved core construction, the door can be hung from either side. Hardware is easily installed in any standard or custom position. Lights and louvers may be cut on the job.

Dimensional stability is unusually great because of special core construction and built-up rails and edge banding.

This lumber core door is available in a wide variety of standard sizes and many strikingly beautiful face veneers in domestic or imported hardwoods.

MENGEL HARDWOOD HOLLOW CORE FLUSH DOORS

Meet low cost requirements with this high quality door that combines beauty, durability and economy. Designers of homes, offices and public buildings of all kinds have specified this popular door for years to meet requirements that called for distinctive appearance and dependable service at a price well within even modest budgets.

The rigid, grid-constructed core and dovetailed wedge-locked joints on stiles and rails give the Mengel Door exceptional dimensional stability.

How to stop picture window chill!

With catlike quickness the new Trane "Picture Window" Convector intercepts those infiltrating fingers of cold air that forever seek admittance to the room with the view. Skillfully designed to blend with the artistic beauty of the picture window, this new low heating unit gently but thoroughly blankets even the largest expanse of glass with protective warmth—positively preventing picture window chill.

This newcomer to the Trane line provides the same dependable, economical convector heat as standard size units. It embodies the same efficient extended surface heating coil—the same top quality materials and construction features as all other Trane Convectors.

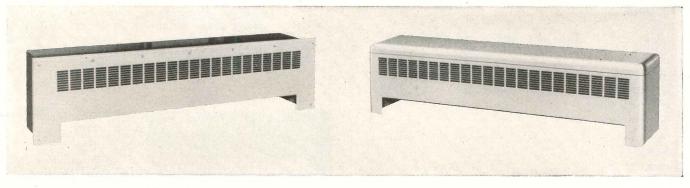

Used as supplementary heating, the picture window convector puts heat in a hurry on the area of greatest heat loss. Rooms are more evenly, quickly, healthfully warmed all over, at low fuel cost.

There is a Trane Convector for every picture window that has a space of 12" or more existing between the bottom of the casement and the floor line. Available in three styles—free-standing—semi-recessed—or completely recessed, in depths of 4", 6", 8" or 10", and lengths from 17" to 88" for any steam or hot water system. This new Convector development is but one of a complete line of Trane Convectors. Ask the Trane sales office in your area for complete information.

only Blo-Fane*

HAS THIS BLADE

PROPELLER

A propeller fan blade is designed to move large volumes of air ... But, 75% of the air moved is thrown from the faster-moving blade tips. Blo-Fan blades supercharge the weaker center area by placing the fan element closer to the

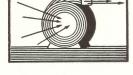

center beneath the blower section of the blade where air literally is scooped up and fed to the blower vanes.

BLOWER

The squirrel cage type blower delivers air at great velocity, but the air tends to thin out in the vortex or air inlet, thus limiting volume. In the Blo-Fan the blower vanes expel the air that is fed to them by the fan element with much greater

power than is possible by a propeller-type ventilator. A blower has power, but lacks volume.

BLO-FAN

COMBINATION PROPELLER AND BLOWER

Only Blo-Fan combines the best elements of both fan and blower. The propeller element feeds air to the blower element, thus minimizing loss of power or volume. That's why Blo-Fan delivers more air at moderate speeds than

either a blower or propeller-type ventilator. Blo-Fan combines the power of a blower and volume of a fan.

IN VENTILATING FANS, BLADE DESIGN MEANS EVERYTHING! * Trade Mark Reg

The exclusive AIRFOIL LOUVER is the FIRST REALLY NEW IDEA in air conditioning grille, register and outlet design. Surfaces of this louver are smooth as glass. Contours are exactingly streamlined. All louvers are solid section and made from extruded materials. AIRFOIL LOUVERS are individually adjustable. There are no cracks, no crevices which will cause noise. Exhaustive wind tunnel tests prove conclusively that AIRFOIL LOUVERS outperform all others. They diffuse air with minimum turbulence, minimum noise, and a near-perfect, draft-free distribution. Special design concealed supports give them great structural strength.

Illustrated above — Streamlined AIRFOIL LOUVER knifes air in wind tunnel tests. Note how turbulence has been almost completely eliminated.

Illustrated above — Airfoil R-L-21 Return Air Grille—features blades on $\frac{1}{2}$ " centers. The deep fins with easy curved deflections are standardized at 0 degrees and 42 degrees.

FOLDING TABLES & BENCHES

Two great names join forces!

EFFECTIVE January 6, 1950, American Air Filter Company, Inc., Louisville, Kentucky, and The Herman Nelson Corporation, Moline, Ill., merged their interests, with the former company remaining as the surviving corporation.

Each organization will continue to oper-

ate from its respective headquarters, with present management and field representation.

In the future, industry may expect even still finer products and services from these two recognized leaders in the field of heating, ventilating, air filtering and dust control equipment.

American Air Filter Company, Inc.

LOUISVILLE 8, KENTUCKY . MOLINE, ILLINOIS

Modernfold doors save space ...and do it beautifully!

In these days when high costs dictate smaller houses and smaller rooms, space-saving devices are especially welcome to architects. And when they enhance the beauty of the house—well, it's just what you ordered. Modernfold accordion-type doors save space which is wasted with swinging doors. Modernfold Doors save up to six square feet per opening—make rooms that much larger.

With larger Modernfold Doors, rooms can be convertible. Open, they make one larger room; closed, two small private rooms. Do not confuse Modernfold Doors with curtains. They have sturdy metal frames covered by eye-appealing, plastic-covered fabrics. These come in a variety of popular colors that blend perfectly with any general color scheme.

Specify these folding doors for both residential and commercial clients. They solve closure or partition problems—both from a decorative and a practical viewpoint. Remember, they're fabric-covered for beauty—metal-framed for rigidity and strength. Mail coupon for full details.

Modernfold Doors are priced from \$26.00 (F.O.B. New Castle) and up.

Look in your telephone book under "doors" for the name of our installing distributor.

WALL CONSTRUCTION

Greatest
Advance
in 300 years
of Building
Construction

Repeated surveys record the rapid growth in demand — by architects, builders and home owners — for the common sense, up-to-date method of building . . . dry wall construction.

For the past 32 years Homasote has been steadily replacing plaster and has now been used in millions of dollars of private homes. Constantly pioneering in the development of dry wall construction, Homasote Company has invested more than \$500,000 in research since 1936.

Dry wall construction — with Homasote Big Sheets — offers many major advantages . . . The average wall is covered with a single sheet; batten strips and unsightly wall joints are eliminated. In a single material you provide lasting insulation value and great structural strength.

Dry wall construction — with Homasote Big Sheets — means walls that are permanently crackproof, ideal for paper or paint, lending themselves to modern decorating effects, modern mouldings and trim.

Use the coupon below to secure performance data and illustrated literature on Homasote and allied products.

A FREE SERVICE

Let Fenestra Engineers help you plan Industrial Daylighting and Airation for specific plant needs

Calculating the exact amounts of daylight and fresh air needed . . . bringing them deep into the interior of the plant . . . these are problems as varied as industrial plants themselves. The answers to those problems can save thousands of dollars by increasing production—decreasing waste.

Choice of window types and decisions on their placement call for detailed engineering study . . . study Fenestra* is equipped to make for you. For more than forty years the Fenestra Department of Engineering Research has been working out solutions to daylighting and airation problems for specific plants.

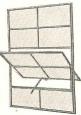

This is a free service. Send your early plans to Fenestra Engineers . . . let these experts apply their engineering experience on windows to your individual requirements. If you wish, they can work directly with you.

For a full explanation of what this planning will include, mail the coupon, or call your Fenestra Representative (listed in the yellow pages of your telephone directory).

PIVOTED WINDOW

Widely used for an abundance of daylight, fresh air and see-through vision, to improve morale and production efficiency. Combine vertically or horizontally to form walls of windows.

COMMERCIAL PROJECTED WINDOW

Popular for efficient, economical screening or shading—vents do not interfere. Open-out vent serves as a canopy over opening, protecting interior against rain; open-in vent is a built-in windguard, shedding water outside.

SECURITY WINDOW

A steel window with integral steel grille to bar prowlers. Passage of material is checked, too. Ideal for first floors, windows bordering fire escapes and windows near roofs of adjoining buildings.

Fenestra Department of Engineering Research Detroit Steel Products Company, Dept. AR-2 2252 East Grand Blvd. Detroit 11, Michigan

Please send me further information on your free Industrial Daylighting and Industrial Airation Planning Service, as well as data on Fenestra Windows.

NEW GALLAHER Air-Van Power Exhauster

- Motor out of the air stream.
 - Completely weatherproof and self contained—requires no penthouse.
 - Positive acting squirrel-cage fan —no backdraft damper required.
- Low installation cost direct connected.
- · CERTIFIED RATINGS

Pat. 2188741 Pat. Pend.

Low Silhouette of for Modern Buildings

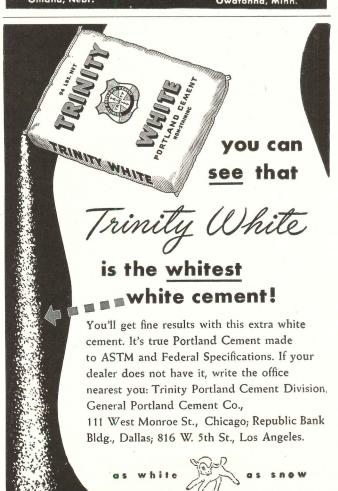

No projection above the average parapet to answer the problems of

modern architecture. Construction is the heaviest of any device of its kind.

Motor out of airstream safely removes explosive and corrosive fumes without danger of motor damage. Motor hood under negative pressure of fresh air passing around motor prevents formation of explosive concentrations. Capacities 100–12,000 CFM. Static pressures to 13/4".

For full information contact your Gallaher representative or write The Gallaher Co., 4106 Dodge Street, Omaha.

The GALLAHER Company

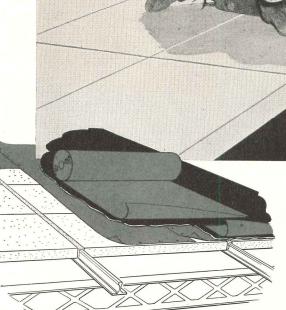

Couly ROOF TILE

-INSULATES

-and IS LIGHTWEIGHT

-and IS LOAD BEARING

-and IS NON-COMBUSTIBLE

SIMPLE FAST CONSTRUCTION

Kaylo Roof Tile are laid on subpurlins or structural steel members or nailed to wood joists. End joints are grouted. Roofing material is applied on tile. No special skills or tools are required, and one man easily handles the 23-lb. tile.

See Sweet's File — or write Dept. N-19 for sectional sample and complete information

Kaylo Roof Tile is composed of one part inorganic materials and four parts sub-micronic voids...formed into a light, but strong wire-mesh-reinforced tile which is a dimensionally uniform 25% x18x36 inches.

The result is a roof-deck material with characteristics no other single material offers—

INSULATION VALUE equal to $1\frac{1}{2}$ -in. standard insulating board. No extra insulation needed on normal jobs.

LIGHT WEIGHT—5 lbs. per sq. ft.—permits substantial savings through lighter roof structure and makes it easy to handle and lay.

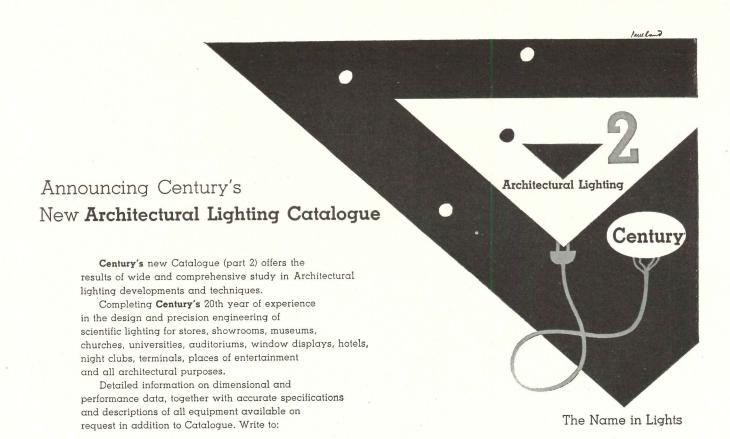

STRUCTURAL STRENGTH—Will easily carry all normal roof loads with an adequate safety factor.

FIRE PROTECTION—Kaylo Roof Tile is non-combustible, protects against fire for well over 1 hour under standard test conditions.

Donald Atkinson Fletcher • Architect D.P.L.G.

A HANDBOOK FOR

STUDENTS · DESIGNERS · ARCHITECTS · TEACHERS

Dealing with the design process and with problems encountered in designing buildings Stiff cloth bound • 6" x 9" • 212 pages

For beginners in architecture, this book offers a systematic introduction to design. It states in organized form material in design that is treated orally in the drafting room, but usually at random. Only when this material has been grasped can the study of design become effective. Basic factors in design, selected and paired, are exemplified by common architectural subjects forming eleven short exercises. These are arranged in a typical sequence, in an order suitable for learning. (See review in Architectural Record.)

TIM-TRUSS Bowstring ... the truss with a future

Attractive in appearance, versatile in application, and requiring little or no maintenance, the Tim-Truss fills the need for a stable, fire-resistive bowstring truss.

MONOCHORD CONSTRUCTION

Chords are glued laminated of structural quality material, thoroughly kiln dried. They will not shrink, check, twist or warp, and camber is maintained without adjustments. Length of chords is restricted only by limitations of shipping and handling, with chord splices either eliminated or greatly reduced in number.

The Tim-Truss is highly fire resistive, due to the dimensions of the one-piece chords. They qualify as heavy timber construction, with resulting favorable fire insurance rates.

ELIMINATES CEILING EXPENSE

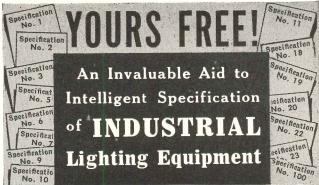

Open, streamlined appearance of the Tim-Truss produces handsome wide span areas without ceilings. If desired, however, they may readily be installed.

Your nearest Timber Structures office will gladly give you detailed information on the Tim-Truss; or write us for catalog of roof trusses.

Consult your local Tremco Representative or write to: THE TREMICO MANUFACTURING CO. CLEVELAND 4 . TORONTO

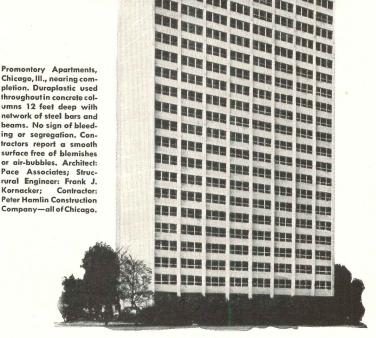

Ten Years Ago

in August, 1939, this concrete test paving was laid in Second Avenue North, Minneapolis. The badly scaled section of roadway in the background was made with regular portland cement. The foreground section, laid at the same time, was made with Atlas Duraplasticthe first commercial use of the air-entraining

portland cement originated and developed by Universal Atlas. Both sections, subjected to the severity of ten Minneapolis winters and to heavy applications of de-icing salts, are shown just as they appeared in July, 1949 - convincing proof of the characteristic durability of Duraplastic concrete, of its high resistance to freezing-thawing weather and the scaling action of de-icing salts. Longitudinal structural crack shows some ravelling. Note perfect transverse joint.

PORTLAND CEMENT

Promontory Apartments. Chicago, III., nearing com-pletion. Duraplastic used throughout in concrete col-umns 12 feet deep with network of steel bars and beams. No sign of bleeding or segregation. Contractors report a smooth surface free of blemishes or air-bubbles. Architect: Associates; rural Engineer: Frank J. Kornacker; Contractor: Peter Hamlin Construction

Send for new free booklet, "A Decade of Duraplastic Air-Entraining Cement." Write to Write to Universal Atlas Cement Company, (United States Steel Corporation Subsidiary), Chrysler Bldg., New York 17, New York.

Added Durability and Improved Appearance in structural concrete made with DURAPLASTIC*

From initial paving installations...to the first structural job . . . to beautiful, modern structural achievements like the one shown here, architects, engineers and contractors have come to rely more and more on the extra durability and improved appearance of concrete made with Atlas Duraplastic air-entraining portland cement.

In Duraplastic's rapid ten-year growth, its advantages have been applied to all types of mass and structural concrete-for foundations, walls, columns, and floors. It's ideal for slip-form, gunite, stucco and similar uses.

With Duraplastic, less mixing water is needed for a given slump. The resulting mix is more plastic, more workable, more uniform and cohesive. It's easy to place and finish. Water-gain and segregation are reduced. Surface appearance is improved and has higher resistance to the effects of weather-exposure.

For structural concrete needs of today and tomorrow, Duraplastic offers better concrete at no extra cost. It provides the precise amount of air-entraining agent interground with the cement for satisfactory field performance. It complies with ASTM and Federal Specifications, sells at the same price as regular cement and calls for no unusual changes in procedure.

OFFICES: Albany, Birmingham, Boston, Chicago, Dayton, Kansas City, Minneapolis, New York, Philadelphia, Pittsburgh, St. Louis, Waco.

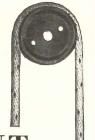

*'Duraplastic" is the registered trade mark of the air-entraining portland cement manufactured by Universal Atlas Cement Company.

AGAIN AVAILABLE

by CHARLES BUTLER, F.A.I.A and ADDISON ERDMAN, A.I.A.

"Hospital Planning," the first important textbook on the subject in a generation, offers a complete treatise on hospital architecture . . . gives a cross-section of the best in hospitals produced in this country within recent years ... and provides exhaustive study and examination of new trends.

Messrs. Butler and Erdman, working as a team of specialists, have directed a nationwide, on-premise survey of hospital planning — in theory, in everyday practice and under the stress of unprecedented demands and emergencies. The most significant examples of hospital planning have been studied, assembled, abstracted and dramatized.

This 236-page volume is for architects and hospital groups alike. It will help architects and engineers to learn of the great advances made in hospital architecture . . . to acquire a working knowledge of hospital procedure . . . to avoid the many pitfalls which beset the hospital planner. It will help hospital administrators to visualize their problems in terms of community needs . . . show them how others are meeting similar problems. Price \$15, postage prepaid.

INSULATED GROUND LEVEL FLOORS CAN BE INSTALLED EASILY AND ECONOMICALLY with NEW INSULATING CONCRETE

This diagram of a floor with radiant heat coils shows one of the many ways in which Zonolite Vermiculite Concrete can be used efficiently.

GRAVEL :

SO EASY TO INSTALL

Zonolite Insulating Concrete is extremely light and is made by mixing portland cement with Zonolite Stabilized Concrete Aggregate—a material weighing only 8 pounds per cubic foot. Because it is so light and easy to handle, it can be efficiently and rapidly applied.

Here's How ZONOLITE* Vermiculite Concrete Gives You EXTRA ADVANTAGES

Architects and contractors are discovering a new type ground level floor that insulates against heat loss into the ground and is free from condensation the year around. This new floor is made of Zonolite Vermiculite Concrete, a revolutionary form of insulation.

Floors made with Zonolite Vermiculite are low in heat capacity, permitting better control of room temperature by minimizing heat lag—a real advantage when heating rooms. This advantage, combined with its insulating qualities, makes Zonolite Vermiculite Concrete the ideal base for radiant heat pipes installed in the floor.

Millions of square feet of Zonolite Concrete have been installed in large scale housing projects, industrial structures, college dormitories and many other type buildings. A fireproof Zonolite Concrete floor increases the building value and makes the property far more salable.

KENTILE FLOORS suit every type of store

Unlimited variety of design effects with this low-cost, long-wearing flooring.

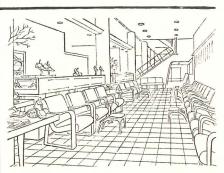

Kentile's 23 colors . . . plus feature strips and special inserts . . . give wide latitude for design effects. This floor blends with any type of interior . . . and lends itself particularly well to open front store design.

Yet for all its decorative appeal, Kentile is outstandingly low priced and famous for resistance to wear. Despite constant foot traffic Kentile keeps the fresh attractive appearance that builds business for the retailer. Cleaning is a simple matter with this smooth-surfaced, dirt-resistant asphalt tile. Colors go through the material—can't wear off.

Kentile can be installed on any smooth firm underfloor—no expensive sub-base necessary. You can specify it for use on concrete below grade or on sound double wood floors with top tongue boards not over 3" wide.

KENTILE SIZES FOR EVERY INTERIOR. Kentile is made in $9" \times 9"$ squares. Also in special sizes — $3" \times 3"$, $3" \times 6"$, $4" \times 4"$, $4 \frac{1}{2}" \times 4 \frac{1}{2}"$, $4 \frac{1}{2}" \times 9"$ and diagonal tile of all sizes. Standard Kentile is $\frac{1}{2}$ 8 inch thick with $\frac{3}{16}$ 6 inch also available.
