ENTRY PROCEDURE

Any registered architect is invited to submit material for RECORD HOUSES 1988; no entry forms or fees are required. Materials sent to us should include all relevant plans and sections, a short written description, and whatever photographs suffice to describe the project. All materials should be securely bound and submitted in an 8 1/2 x 11 inch format. Do not send materials that must be returned before the date of publication. The deadline for submissions for RECORD HOUSES 1988 is October 31, 1987.

Of particular assistance to the editor in the preparation of this issue were Douglas Brenner, editor-in-charge
Muriel Cuttrel, illustration
Laura Marchisio, production

The Vista clad wood slider from Caradco.

Casement looks without the casement price.

Rich, natural Western pine interior.

Dual weather-stripping assures a tight seal.

Unique sill incorporates a PVC thermal break and track for smoother operation and better energy efficiency.

Self-aligning triple-action cam lock.

Dual-sealed 5/8" insulated glass.

Heavy-duty aluminum cladding for durability and low maintenance, available in Brilliant White or Chestnut Bronze.

Now you can give your customers the beauty of rich, natural wood at a lower price: the Vista clad wood slider, styled to give you the look of a casement window. Warm Western pine inside. Tough aluminum cladding outside to minimize maintenance. All in one of the industry's lowest-priced clad wood sliders.

The Vista clad wood slider. In 12 standard two-sash sizes and four picture-window sizes

that make it perfect for new construction and replacement. Only from America's Window Pioneer.

ICE & WATER SHIELD PRESENTS THE FINE ART OF PRESERVING A MASTERPIECE.

When you create something innovative, dramatic, substantial, you ought to give it the best protection possible from costly water damage.

Ice & Water Shield—developed by the makers of Bithuthene® Waterproofing Systems—offers the most cost effective, long-term protection against ice dam and wind blown rain damage on the market today.

This tough, flexible self-adhering membrane installs easily under shingles, slate, shakes, tile, metal and around all building details where additional waterproofing is needed.

What's more, Ice & Water Shield never interferes with the integrity of your design because it's completely invisible after installation. For more information, contact E.R. Davis, W.R. Grace Construction Products Division, 62 Whittemore Ave., Cambridge, MA 02140. And protect your landmark from watermarks.

Ice & Water Shield™ GRACE

INNOVATION ALWAYS SURFACES.

Count on Formica Corporation to give you the competitive edge for your next design. This year, we're introducing a wide range of new patterns that will expand your creative horizons.

Work with the variety of stone textures in our American Granite collection. Create with the subtlety of our pointillist Dust and Clear Sand collections. Design with the realistic look of hand-made paper from our Papercraft collection. Embellish with the rich, natural beauty of our Woodgrains. Plus, all solid colors are available in a polished finish.

So if you're looking for tomorrow's ideas today, look to Formica Corporation. The first name in exciting surfaces.

**THE FIRST NAME IN SURFACES.
THE LAST WORD IN INNOVATION.**

NATURALITE

New Engineered Glass Skylight System.

You know what conditions are like in the building industry today. You put your neck and your reputation and your liability on the line every time you specify a product. So do we. And, that's why we make Naturalite to be the best engineered, best designed, best performing skylights in the industry.

When Wm. Graves, Inc., Architects, specified skylights for the stunning Villa Linda Mall in Santa Fe, they chose Naturalite. "We have done several installations with Naturalite," says William Graves, president of the company. "We're deeply impressed with their commitment to quality and the devotion of their people to design integrity and performance. After all, a skylight that doesn't perform is no bargain."

Next time, specify Naturalite. Whatever the design, whatever the job, Naturalite can cover it beautifully.

Your single source for skylights since 1945.

Owner-Developer*

Sometimes compromise is the best solution.

He wanted clean and contemporary. She was inclined toward the more traditional. With the help of beautiful, enduring red cedar shingles, the architect pleased them both.

But there's more to red cedar shingles and shakes than first meets the discriminating eye. Here is a roof that endures for decades. Plus energy efficiency that's hard to surpass.

To fully understand why red cedar shingles and shakes are such a superior solution, write for your free copy of the Architect's Cedar Library. It tells you everything you need to know regarding insulation, ventilation, product selection and more. Simply address your request to:

Cedar Library, Suite 275, 515-116th Ave. NE, Bellevue, WA 98004.

Performance you never thought possible with exterior insulation systems.

Face it. Designing for yourself means satisfying the harshest critic of all, the toughest client you'll ever have.

It means uniting your most inspired designs with materials that deliver the highest standards of performance.

STO Exterior Insulation Systems surround homes with a flexible, moisture-resistant shield that not only defies the elements but creates superior energy efficiency in every season. All while standing up to the most demanding aesthetic requirements.

And if you've satisfied the harshest critic of all, you'll know you've found a wall system to rely on.

A View From The Side Shows Why Duro-Last Is Tops

Duro-Last, the leader in single-ply roofing, wants you to see for yourself why the Duro-Last Roofing System is so much in demand.

Duro-Last . . . A Cut Above

As you can easily see, Duro-Last fabricates the entire single-ply roofing system . . . everything you need to meet all your new and retrofit roofing requirements.

Duro-Last Saves You Time And Money

Duro-Last's custom fabrication means 80% fewer field welded seams. Fewer field seams means faster and easier installation. Research shows that the Duro-Last Roofing System will cut labor and installation costs up to 50%!

Duro-Last Gets To You Exactly As You Want It
The Duro-Last Roofing System Comes To You Complete. All materials arrive:

- on site
- pre-measured
- pre-cut
- welded into sheets up to a maximum 2,500 sq. ft.
- with all fasteners, custom stacks, custom curbs and other accessories

Duro-Last Gets To You Fast

Your Duro-Last roof will be in production within hours of our receiving your order. And your complete roofing package will be on its way to you within days.

Duro-Last . . . Lasts

Duro-Last isn't afraid to put its money where its roof is. Your Duro-Last Roofing System comes with a 20 YEAR WARRANTY plus a \$6,000,000 LIABILITY POLICY on your building and its contents.

No Matter How You Cut It . . . Duro-Last Is Tops

When you're ready for a new roof, call the roofing innovators first. Call Duro-Last TOLL FREE.

WE CALL IT

THE PERSONAL ARCHITECT.

NOT THE PERSONAL DRAFTSMAN.

We named it on purpose. This is a tool for the entire architectural practice, combining automated design and drafting capabilities on industry-standard IBM* PC ATs and compatibles.

Use the Personal Architect to design buildings. While other systems work with lines and arcs, the Personal Architect lets you work with floors, walls, roofs, and rooms. In 3-D. In perspective. So you can create a true model of your building design.

Use the Personal Architect to present designs.

This system gives you the tools you need to make effective presentations. Like perspective views with hidden lines removed. Shaded pictures. And area takeoffs.

Use the Personal Architect to produce drawings. The system

has expert drafting capability to get your production work done. And can edit drawings quickly too.

On-screen icon menus get you up and running fast. And a graphic symbol library of over 1,000 architectural symbols gives you great flexibility.

The Personal Architect. It can help you get more business and do more business. And isn't that the name of the game?

Get more business done. On-screen menus (left screen) facilitate the production of contract documents. Drawing courtesy of Heard & Associates, Chicago, Illinois.

Get more business. Shaded pictures (right screen) like this help clients see your vision clearly from any perspective. An invaluable selling tool. Drawing courtesy of Stephen Douglass, Architect, Cambridge, Massachusetts.

For more information on the Personal Architect write: Computervision Corporation, Personal Systems Business Unit, Building 16-2, 100 Crosby Drive, Bedford, MA 01730.

"Nope!"

"Whattya mean, nope?"

"I mean we'll never find carpet tiles to match."

"Maybe we should go back to heliotrope."

"Maybe we should just paint the floor."

Nope. You don't have to paint the floor. You don't have to go to heliotrope either. Or to any color you don't want. Lees makes carpet color matching easy and precise.

As the world's largest maker of broadloom and modular carpet systems, we give you all the color capability you'll ever need. Custom color and design programs that are easy to work with. Hundreds of in-stock colors. Patterned coordinates.

We've added hardback carpet tile systems in advanced generation Antron® nylon by DuPont with soil and static protection built in. And our modular systems are performance guaranteed for ten years.

For brochures, test data, specifications, call toll-free 800/523-5647. From within Pennsylvania, call collect 215/666-9426.

THIS IS SHAKERTOWN SIDING'S MOST BEAUTIFUL SIDE.

When most people see Shakertown, they ooh and ahh over the natural beauty of our genuine Western red cedar shingles.

While we're flattered, we've got a lot more to offer than just a pretty face.

But for the other side of the story, you need to look at the other side of our siding.

Right off, you'll notice something you haven't seen before on siding: Plywood.

It's there so you can nail Shakertown right to the studs. With no extra sheathing. And no extra labor.

Then, across the bottom, we've added an ingenious self-aligning groove that makes

chalk lines, story poles and other time-wasters strictly passé.

Now observe how every 8' length of Shakertown Siding is cut precisely to fit stud spacing. The reason? Because no waste makes haste.

So the long and short of Shakertown is that our back is as beautiful as our front.

Which means when you're searching for a building material that looks as good to you as it does to a buyer, there's only one thing to do.

Get Shakertown on your side.

A TRIUNOVA COMPANY

Woodruf® Roofing sets you apart.

Woodruf Roofing is the distinctive roof for the better homes in demand today. Across the country, people who are building want more. They demand unique, personalized homes, and they are willing to pay for them. For these homes, Woodruf® Traditional from Masonite Corporation is *the* roof. Woodruf is unique, beautiful, functional, and very profitable.

Beautiful, rugged, warranted.

Woodruf® Roofing's deep shadow lines and rugged texture closely resemble that of cedar shakes and shingles; yet, it is free of the irregularities of the cedar products. The result is a highly crafted, custom look.

Woodruf Shingles are produced by a revolutionary process that bonds wood fibers so they're actually stronger than the original tree. So strong that Masonite Corporation backs Woodruf Traditional with a limited warranty* against manufacturing defects, wind, and even hail.

Impressive five year track record.

Testimony to Woodruf Roofing's appeal is a five year track record among Florida, Texas, and California builders. In these prime cedar regions, Woodruf shows an impressive record of being selected over cedar in the construction of more and more upper bracket homes.

Woodruf gives your homes a unique look that sets them apart. That's what people are demanding and that means more sales and profit for you. For more information, call 1-800-848-3673. (In New York State, 1-800-441-4420.)

Exclusively by Masonite

*Woodruf® Shingles have a prorated limited warranty of 25 years against manufacturing defects, and 5 years against wind and hail damage. This warranty is subject to the written terms and conditions of the Masonite Corporation Woodruf® Limited Warranty. Details and a copy are available at the place of purchase or from Masonite Corporation, 1 South Wacker Drive, Chicago, IL 60606. THIS ADVERTISEMENT IS NOT THE LIMITED WARRANTY.

RENEW YOUR

Creative License

C O L O R Q U E S T®

You've been down this road before.
 Your mind's racing. You've got talent to burn. And you're about to drive yourself crazy looking for the solid colors to take you from concept to reality.
 At that moment, you'd mug Foster Grant® for a new set of shades. But you needn't go to extremes. There's a simpler solution.
 Renew your creative license with Color Quest '87. Once you do, you'll find yourself in the driver's seat with 33 brilliant new solid colors. If you think this is an incredible addition, you're right. There are fresh pastels to fuel your imagination. Blended classics offering subtle nuance. Jewel brights that illuminate. And dramatic darks with power to spare.
 Now let your imagination slip into overdrive. When you add these new solids to the existing

Color Quest line, you have 110 of the most exciting design opportunities available. It's a palette of evolutionary proportions. And enough to renew anyone's creative license.
 Of course, after you renew your creative license, you may be overrun by clients wanting to know who's behind those new Color Quest shades.
 But then, you've been down that road before, too.

DISTINCTIVE DESIGNS...

At last, beauty, performance and affordability in quality wood windows

Elegant styling and traditional beauty are yours when you choose Weather Shield's unique Eyebrow Double Hung.

This energy efficient classic has been precision designed and carefully constructed from only the finest preservative treated Ponderosa pine. Combine this with your choice of several exterior frame options and you have that special window that you have been searching for.

Authentic Williamsburg True Divided Lite, both with or without Low "E" glass, is one of the glazing options you may choose. But no matter what your choice, you are protected by Weather Shield's 20 Year Limited Warranty. Your assurance of total satisfaction.

Better Ideas In

Unlimited design possibilities open up when you use Weather Shield's Eyebrow Casement window. Quality materials plus craftsmanship in design make this window adaptable to most building projects.

You have your choice of several exterior frame options and a number of energy efficient glazing options, including authentic Williamsburg True Divided Lite.

Break away from the conventional and let Weather Shield's Eyebrow Casement set your next project apart from the competition. After all, don't you deserve Weather Shield innovation?

All Weather Protection - Always!

Wood Windows!

What they
never taught you
about grades
in school.

ANSI asks a minimum 800,000 operational cycles from a Grade 1 mortise lock. We get more than 6.5 million.

Built-in stopworks in the thumb turn unit.

Solid steel and a special copper-infiltrated sintered metal for three times the strength ANSI requires.

Our 3/4-inch latch bolt retracts with 350% less torque than ANSI requires.

This lever opens 28% smoother than ANSI requires.

Most locks just make the grade.

But Schlage isn't content to simply duplicate ANSI specifications. With sixty years of leadership behind us, pushing performance limits has become a corporate mission.

That's why, when you specify Schlage, you're not just meeting the standards. You're surpassing them. By plenty.

So if someone ever tries to substitute an "equivalent" for Schlage—tell them there isn't any.

We'll show you. For our Architectural Guide, write Schlage, P.O. Box 3324, San Francisco, CA 94119, or call (415) 467-1100.

Because you can pass with any Grade 1 lock. But with Schlage, you'll graduate with honors.

Ask the man who uses Gyp-Crete

“This Company introduced ‘Gyp-Crete Floor Underlayment’ on 336 apartment units . . . and found it to be superior to other topping materials. Its fast application and fast setting time allows other work to continue. Prior to Gyp-Crete this could not take place. We . . . have specified its use on our next 775 units.”

Project Manager
Leading National Construction Co.
(name on request)

There are 7 reasons why builders, developers and architects prefer

poured over concrete, plywood or particle-board for residential, commercial, retrofit applications:

- 1** 1,000 PSI: thin and light, but tough and strong
- 2** hence costs less to smooth any subfloor
- 3** expands; never shrinks or cracks
- 4** sets in 90 minutes; work resumes faster
- 5** better sound, fire, smoke control; thermal seal
- 6** 6.5 lbs./sq. ft.; less load, less cost
- 7** permanent seal against insects and vermin

is even stronger and tougher (2500 PSI)—for pre-cast commercial, renovation and retrofit applications. Pours as thin as 3/8" and creates a super smooth surface over new or existing subfloors—in 90 minutes. Superior performance in single-family residential construction.

Firm Foundations.

McGraw-Hill books on the building arts.

1. MASONRY IN ARCHITECTURE

By Louis G. Redstone, FAIA. 192 pp., 260 illus., 8½ x 11
One of the world's foremost masonry authorities shows the best methods — developed through 5,000 years right up to the skyscraper — for working this exciting material to achieve both form and aesthetics. *Just published!*

2. THE AIA GOLD MEDAL

By Richard Guy Wilson. 246 pp., 222 illus. (8 pp. in full color), 8½ x 11
The first chronicle of the coveted AIA Gold Medal, this lavish commemorative volume gives full profiles, with photographic portraits, of the 44 medalists to date and examples of their work. *Just published!*

3. HOLDOUTS!

By Andrew Alpern, AIA, and Seymour Durst, real estate developer. 173 pp., 221 illus., 8½ x 11
A lively illustrated history of holdouts in New York since the 1800s — and how they were dealt with — shows what can happen when an obstinate owner forces major changes in planning and building design. *Just published!*

4. GROUND ENGINEERING EQUIPMENT AND METHODS

By Frank Harris. 256 pp., with diagrams and tables
Here are the principles and working knowledge for determining the best construction methods and alternative procedures, devising proper temporary works, and selecting the right plant and equipment to achieve faster construction times and higher quality.

5. AWARD-WINNING PASSIVE SOLAR DESIGNS Professional Edition.

By Jeffrey Cook, AIA. 288 pp., 208 illus. (including 68 photos), 8½ x 11
These 41 winning designs from the First National Passive Solar Design competition demonstrate an impressive number of passive solar solutions for a diversity of structures, from commercial buildings to residences, in a wide variety of terrains and climatic locations. *Brand new!*

6. CHECKING AND COORDINATING ARCHITECTURAL AND ENGINEERING WORKING DRAWINGS

By John Frederick Duggar III. 160 pp., 22 illus. (8 in full color)
How to use the author's unique color-coded graphic systems for marking up check-prints, coordinating construction components, making and recording revisions, eliminating errors, omissions, and duplications, communicating, and retrieving information. *A new title!*

7. HANDBOOK OF ENGINEERING ECONOMICS

By Max Kurtz, PE. 1,020 pp., 317 illus.
Made marvelously easy to understand and to use — every statistical and financial analysis tool you need to control the effects of time and money on every type of engineering project and area of responsibility. The first such aid in the field. *Brand new!*

8. SPECIFICATIONS FOR ARCHITECTURE, ENGINEERING, AND CONSTRUCTION Second Edition.

By Chesley Ayers, AIA, PE. 544 pp., 70 illus.
Specifications can make or break a project, and can even cause construction disasters. Here, in a new, up-to-date edition, is the one book to coordinate the requirements of spec writing and checking into a unified whole — with special emphasis on techniques to build safety into a project.

9. CONSTRUCTION MARKETING AND STRATEGIC PLANNING

By Warren Friedman. 288 pp., 70 illus.
Shrinking construction profits make it mandatory that contractors — large and small — grasp and use every business, management, marketing, and strategic planning tool known to work best. Here they are — detailed with the assistance of the Associated General Contractors. *Just published!*

10. CONSTRUCTION DISASTERS Design Failures, Causes, and Prevention

By Steven S. Ross and the Editors of *Engineering News Record* 407 pp., 144 photos, 62 line illus.
The valuable lessons builders have learned from collapsed roofs, broken dams, floods, and earthquakes are packed into this survey of 24 major disasters of the past five decades, why they happened, and what would have minimized or prevented them. *New title!*

11. THE HANDBOOK OF CONSTRUCTION ACCOUNTING AND FINANCIAL MANAGEMENT Third Edition.

By William E. Coombs and William J. Palmer. 592 pp., 158 illus.
Reflecting the newest trends in accounting and management techniques used in the construction industry, this edition of a well-known work updates your handling of problems in every area from procurement to costs, receipts, taxes, and more.

12. DESIGN PRESENTATION Techniques for Marketing and Project Proposals

By Ernest Burden. 256 pp., hundreds of illus.
From the initial planning and preparation to the actual visual presentation of your design project (including models and computer-aided graphics) to the all-important follow-up — here are the techniques that win clients and keep them coming back for more.

13. PRESERVING AND MAINTAINING THE OLDER HOME

By Shirley Hanson and Nancy Hubby. 256 pp., 323 illus., 8½ x 11
How to accurately and sensitively repair, restore, and renovate those treasured older homes (built between the 1800s and 1940) to bring out their best interior and exterior features, find trouble spots, modernize without distorting — *economically!*

14. SYSTEMS GRAPHICS Breakthroughs in Drawing Production and Project Management for Architects, Designers, and Engineers.

By Fred A. Stitt. 262 pp., 157 illus.
Want to save 30%, 40%, 50% of the time and money you spend producing design and working drawings? Here's the practical how-to for using and linking together today's new, inexpensive forms of in-house reprographics — by one of the best-regarded pros in the industry.

15. TIME-SAVER STANDARDS FOR SITE PLANNING

By Joseph DeChiara, AIA., and Lee E. Koppelman. 864 pp., 1,037 illus.
All-inclusive information and data on site investigation, analysis, development, and use. Plus plans.

16. TIME-SAVER STANDARDS FOR RESIDENTIAL DEVELOPMENT

By Joseph DeChiara, AIA. 908 pp., 1,300 illus.
A vast collection of data and criteria for planning and designing dwellings, from apartments to mobile homes to adult housing.

Rise To The Challenge

VELUX roof windows and skylights make dreams of light filled rooms an appealing and practical reality. Architects on every continent choose VELUX roof windows and skylights when they want to assure their clients of long lasting quality and satisfaction. Crafted of the finest materials, VELUX products can be depended on to meet the most stringent building codes, present no delivery or call-back problems and provide real economy. The most complete accessories program available provides the fullest selection of VELUX awnings, blinds, screens and remote controls.

VELUX roof windows and skylights range in price from under \$110.00 to 500.00. Their low cost makes them a sound solution in passive solar applications. Good looks make them a beautiful solution wherever original design calls for letting the inside and the outside complement each other.

For more information contact your nearest VELUX roof window and skylight supplier or send for "The Complete Guide to Roof Windows and Skylights," a FREE 28 page full-color brochure with photos and technical information, and price list.

The day you start designing every house exactly alike

Whether you're working on a custom design or custom appearance, you want every home to have a look of its own.

That's why we designed so much versatility into Restoration™ vinyl siding. So you can put your personal stamp on every project.

LZT Associates, Inc., J. Thomas Seymour, Project Designer, AIA

Corbin Yamafuji Partners, Inc.
Gary Gregson, Architect, AIA

What's more, Restoration vinyl offers your clients everything they've come to expect: beauty, quality, long life, low maintenance.

FINALLY, VINYL SIDING WITH A LITTLE IMAGINATION.

Restoration's smooth, low gloss finish has the appeal of painted wood without the high cost. It won't blister or peel, and never needs painting. That's a promise.*

But it's only part of the story.

Our Restoration Collection™ adds the finishing touches: window and door surrounds, wide corner posts, beaded soffit, lattice, and decorative rounds.

All in premium vinyl. All easily adapted to give accent and shape to your ideas.

Wilkins-Riedmann & Associates, Inc., Frank J. Riedmann, Architect

RESTORATION
COLLECTION™

e'll start producing siding like everyone else's.

OTHER IMAGINATIVE IDEA: HELP.

You don't need telephone order takers. You do need people who can knowledgeably answer your questions. Our technical staff will field your calls from any corner of the U.S. We'll rush you literature and samples. We'll help in any way we can with the projects you're working on. And if you need us on site, we can be there in person. We'll help you can talk to. That's how we do things. Talk to us soon about a vinyl product that's quite different like everyone else's. Use the coupon or call.

YOU'RE TO

LOOKING THROUGH DETECT HEAT & KEEP

It may look like an ordinary double-pane window, but there's more to this glass than meets the eye.

What you can't see is the revolutionary, transparent coating which acts like a see-through computer designed to know the difference between heat and light. And that means you can specify a window that won't just last for years, it'll actually earn its keep.

THE ANDERSEN®
HIGH-PERFORMANCE
WINDOW.
IT'S PROGRAMMED
FOR COMFORT.

The technology behind this remarkable window is fairly complicated, but the results are easy to process.

In the winter, it keeps homes warmer. In the summer, it keeps them cooler.

How? The secret is a series of microscopically thin layers of metallic coating bonded to an inner airspace surface of the glass. And while you can hardly see it, this programmed surface actually recognizes radiant heat and restricts its flow through the glass. It even

filters out ultraviolet rays that fade fabrics. And all the while, it's practically invisible.

It works 365 days a year, day and night, no matter where your customers live or which direction their windows face.

Perhaps more important, Andersen High-Performance windows are 42% more energy efficient than double-pane windows during the

A COMPUTER PROGRAMMED T WHERE YOU WANT IT.

ordinary window. And while glare and fabric-fading rays are virtually eliminated, there's still plenty of visible light for people and plants to flourish. What's more, High-Performance Sun windows look handsome from the outside, yet colors aren't distorted when looking from the inside.

HOW TO BECOME PART OF THE PROGRAM.

If you're not already specifying Andersen High-Performance windows, contact your Andersen distributor, see Sweet's File 08610/AND, or write Andersen Corp., Box 12, Bayport, MN 55003. We'll show you how to make the world a more comfortable place.

heating months, and 22% more efficient in the searing summer sun. And, as you would expect from Andersen, they look beautiful year around.

THE HIGH-PERFORMANCE SUN WINDOW. IT CONVERTS HOT SUN INTO COOL DAYLIGHT.

Andersen has taken the High-Performance window one step further for hotter climates and homes with a full western or southern exposure.

By adding a High-Performance coating to soft, bronze tinted glass, we've developed a window that reduces the sun's heat up to 2½ times better than an

Corian.[®] The solid solution

Tough, non-porous CORIAN* resists wear in high-usage areas of virtually every shape and size.

Designing for problem areas such as those found in laboratories, banks or hotels requires a surface material that offers maximum design flexibility, durability and minimal maintenance. DuPont CORIAN gives you all three, beautifully.

Unlike laminates or gel-coated products, CORIAN is solid. Its color and pattern go all the way through. CORIAN is tough and non-porous, so it can shrug off the daily grind of high usage. Ordinary stains wipe right off. Stubborn stains (even cigarette burns) rub off easily with cleanser. And fine sandpaper will remove accidental cuts without marring the beauty of CORIAN.

Like fine hardwood, CORIAN can be worked and shaped to fit most areas, even problem spaces. And you can combine CORIAN with many other materials for more individual designs (as shown below).

Send for more information on CORIAN.

See Sweet's General Building Market 6.15/Du, or phone DuPont at 800-527-2601. For our 16-page book, "Designing with CORIAN," write DuPont Co., Room X39925, Wilmington, DE 19898. Telex: 83-5420.

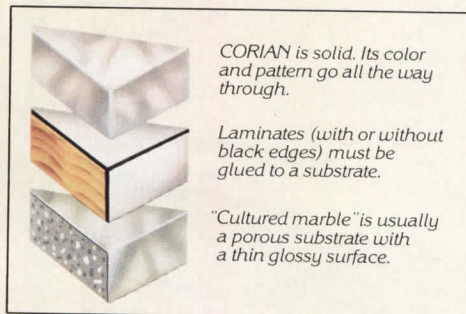

Outside the U.S.A.: Canada: DuPont Canada Inc., Box 660, Station "A," Montreal, Quebec, Canada, H3C 2V1; Europe: DuPont de Nemours Int'l. S.A., 50-52 Route des Acacias, Geneva 24, Switzerland, Phone: 41-22-37-86-18; Australia: DuPont (Australia) Ltd., 168 Walker St., North Sydney, N.S.W., 2060 Australia, Phone: 923-6111; Japan: DuPont Far East, Inc., Kowa No. 2, 11-39, Akasaka 1-Chome, Minato-Ku, Tokyo, Japan 107, Phone: 03-585-5511; Singapore: DuPont Far East, Inc., Suite 601, World Trade Ctr., 1 Maritime Sq., Singapore 0409, Phone: 273-2244.

*CORIAN is a registered DuPont trademark for its building products. Only DuPont makes CORIAN.

Circle 38 on inquiry card

Fireman's Fund Employers Insurance Company, De Pere, WI, shows how CORIAN custom-fits a wide variety of creative designs. Champ Parish Raasch & Associates, architects.

CORIAN is solid. Its color and pattern go all the way through.

Laminates (with or without black edges) must be glued to a substrate.

"Cultured marble" is usually a porous substrate with a thin glossy surface.

CORIAN solidity and impermeable seams allow for maximum hygiene at Guy's Dental School, London. Derrick Graham, architect.

or problem areas.

Because of its beauty and toughness, CORIAN was used for these stylish counters in an El Paso, Texas, bank.

With CORIAN, stubborn stains and cigarette burns are removed with cleanser. Cuts and scratches can be sanded away.

Corian is solid all the way through. Combine it with other materials for unique edge treatments.

IF THEY REPLACED SOME OF THE GLASS WITH MAPES PANELS, A LOT LESS HOT AIR WOULD BE GETTING OUT.

Some buildings are just perfect for the energy saving advantages of Mapes porcelain on aluminum panels.

When used as an alternative in window retrofit projects or new construction, **Mapes panels can offer over three times the energy efficiency of insulated glass.**

Architectural panels from Mapes, in a wide variety of substrates and thicknesses, boast an embossed porcelain finish that's guaranteed 25 years.

This guarantee is based on 35 years of manufacturing success that's unique in the industry. It's a success that's been proven in rugged performance across the country.

Mapes panel in a typical window retrofit.

Our vandal- and scratch-resistant surface won't fade, peel, crack, craze or spall. Embossing eliminates the problem of "oil canning" and hides scuffs. If the panel is ever punctured, it can't rust.

Color choices are virtually unlimited. So are the potential product uses in both retrofit or new construction applications.

Write or call us toll-free at **800 228-2391** for a free panel sample and more information on this beautifully permanent solution that saves both hot air...and capital.

EVEN AFTER 20 YEARS, THIS IDEA STILL HOLDS WATER.

BITUTHENE.[®]

The waterproofing system engineered
to keep water out. Once and for all.

Twenty years ago, we introduced a bold way of guarding structures from the ravages of water and time — Bituthene. And it has been preserving the integrity of foundations, plaza and parking decks, subways and tunnels ever since. Now more than 2 billion square feet of Bituthene protection have been installed around the world.

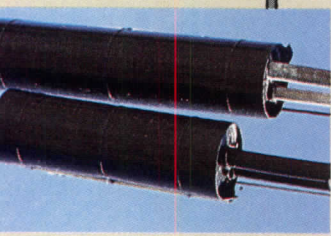

Once it's in place, it's in for good. A rugged, pliable, self-adhering membrane system that was

built to go in once. To go in easily. To stay put. Resist cracking. And never stop working. No matter what the climate.

And it comes to you armed with Grace technical expertise and engineering experience. Protect your structures with a water-tight idea. Bituthene — the waterproofing system with a proven past.

GRACE
Construction Products

INTRODUCING THE CROSS-CONNECT SYSTEM STANDARDIZATION

Flexibility is a key issue in voice and data communications.

And the central issue in cross-connect systems. Whether you're retrofitting or building new, the system has to cope with present requirements, and whatever might come along.

Enter the AMPIX system, from AMP NETCON. A cost-effective, modular information system that interfaces with standard products and offers unparalleled flexibility.

Which translates into long-term economy.

AMPIX systems have the full voice and data transmission capabilities you need now. And designed-in capacity for the future. Its approach to communications and information management is the most technologically advanced you'll find anywhere. Yet it conforms to industry standards, providing a solid basis for system expansion to meet growth requirements.

MOST FLEXIBLE SYSTEM THAT PUTS MORE INTO LESS SPACE.

The AMPIX system is truly "user-friendly." It requires no special skills. Users can rearrange and adapt as their needs change. With minimum downtime, and fewer costly service calls.

Our small size is no small thing, either. Along with everything else, the AMPIX system will cut space requirements over conventional cross-connect methods.

AMPIX cross-connect is the core of a complete premise wiring system.

For more detailed information, contact your local AMP NETCON representative or AMP NETCON distributor by calling toll free: 800-535-3232 EXT. 525.

How to create a TEMPEST

With flowing lines, beautifully sculpted edges, and a perfectly even finish on the base, every table in the Tempest Group makes a quiet statement of elegance.

But compare one to any who try to imitate it, and the Howe table creates a tempest every time. A whirlwind of nervous whispers about its unparalleled beauty, its durability, and its value as a long-term investment.

Because line for line, detail for detail, from elements of engineering to subtleties of design, no other table comes close to the quality of a Tempest. From Howe.

If you'd like Howe to create a Tempest for you, or if you'd like a copy of our Tempest Group brochure, call or write.

**filterVent is the only PRACTICAL way
to meet ventilation requirements!**

Typical shingle warranties *REQUIRE A LOT OF VENTILATION*. To comply with the warranty, you *MUST* follow instructions on the shingle wrapper. Typical instructions call for "1 sq. ft. of total net free ventilation area to 300 sq. ft. of attic floor area."

**FILTERVENT LOOKS BETTER AND
PROVIDES MORE VENT AREA THAN ALL OTHER VENTS**

32 ft. of Filtervent*

32 ft. @ 18 sq.in./ft. = 576 sq.in.

11 Roof Vents* @ 50 sq.in./vent = 550 sq.in.

5 Turbine Vents* @ 113 sq.in./vent = 565 sq.in.

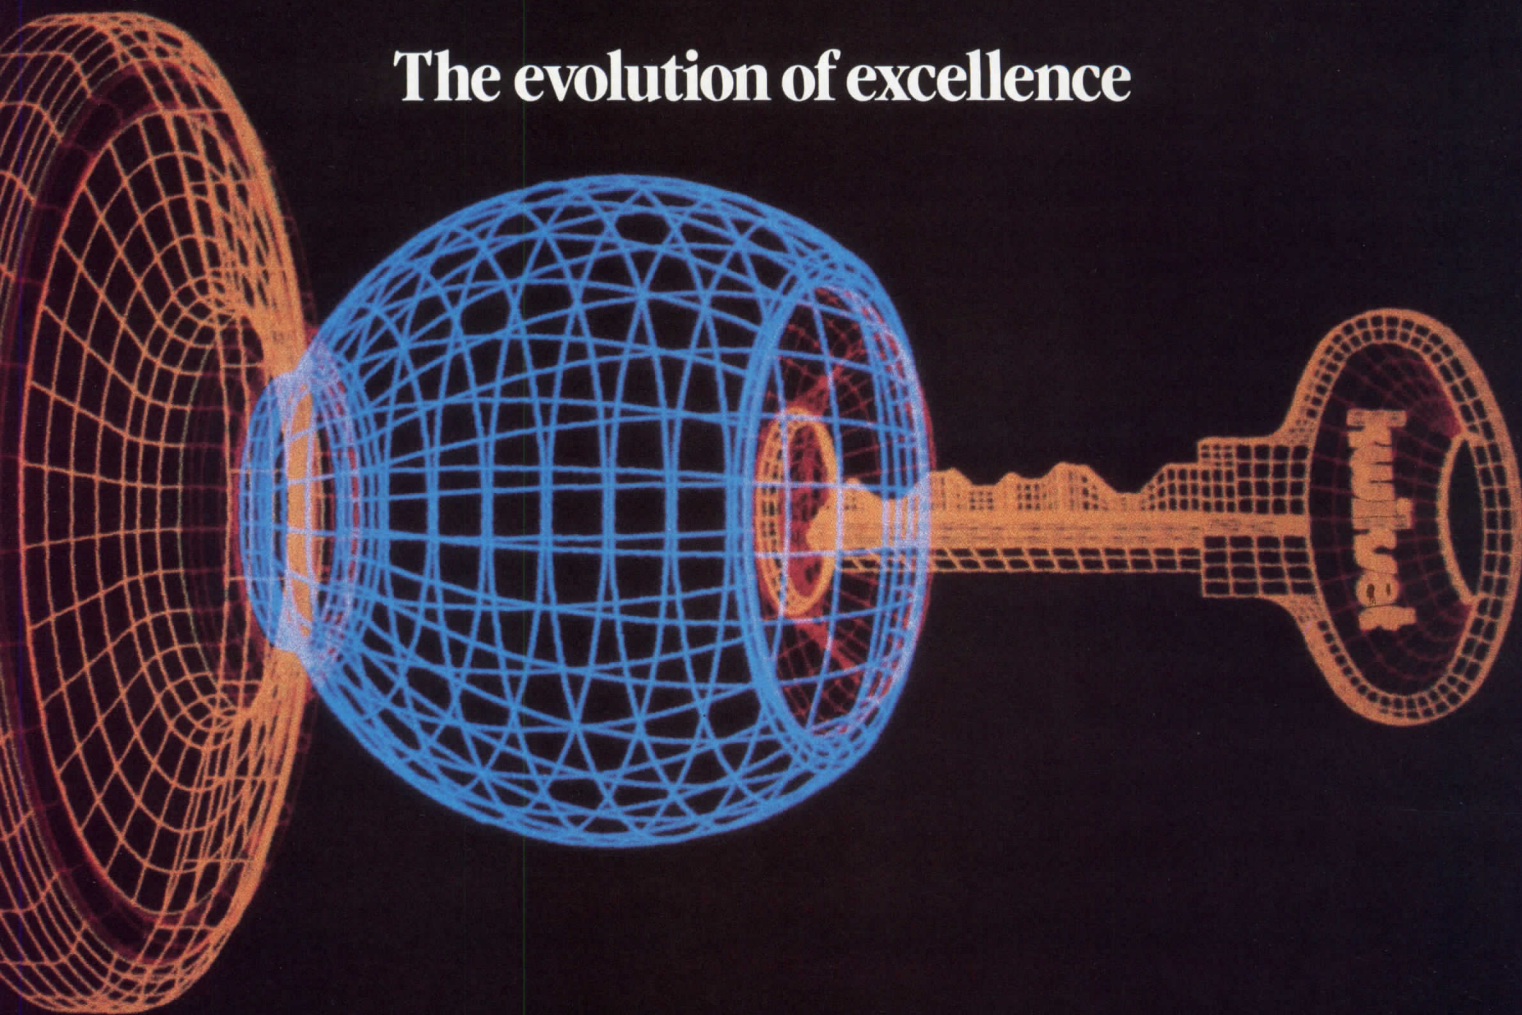

*Ventilation requirements to validate shingle warranty on this house.

The evolution of excellence

Introducing the Kwikset Premium Entrance Lockset.

**An exceptional high-quality lockset
for finer residential and commercial buildings.**

After four years of intensive research and development, utilizing the latest computer-aided design and manufacturing technology, Kwikset has succeeded in producing a heavier-duty entrance lockset at a price significantly lower than any other comparable entrance lockset.

This was accomplished by the innovative merging of new space-age materials with sturdy steel and brass components, which created a rugged, durable lockset with the strength and security needed for installation in high-traffic areas.

Design engineer shown developing a three-dimensional isometric view of the exterior knob assembly on computer terminal.

The Premium entrance lockset has a unique feature not available on any other tubular-style entrance lockset. The exterior knob rotates and spins free when locked by key or interior turn button. This is a valuable security aid for resisting knob wrenching during an attempted burglary.

All three entry functions are U.L. Listed, furnished standard with six-pin tumbler solid-brass cylinder, and have an easy-to-install $3\frac{1}{4}$ " larger snap-on rose for design enhancement.

For a complete illustrated catalog write to Kwikset, P.O. Box 4250, Anaheim, CA 92803-4250.

**Something You Can See Through Will Protect
Your Investment for Years to Come**

Tri-Guards®

It's true! Tri-Guards® protect interior corners with a clear plastic shield that's almost invisible. Tri-Guards® let the beauty of the original decor shine through.

Protecting corners in high traffic areas is a costly and continuing problem for institutional and commercial buildings. Now, by specifying Tri-Guards,® you can control these costs in a handsome and decorative way.

Tri-Guards are practically indestructible. Made from LEXAN,® a high impact material developed by General Electric, Tri-Guards won't crack, chip, or dent, even in high traffic areas. Tri-Guards are the thoroughly modern way to protect vulnerable corners.

Tri-Guards are easy to install. Available in a variety of widths and lengths to fit any corner, Tri-Guards can be installed perfectly in minutes. In addition, Tri-Guards can be removed and re-installed just as easily when a room or corridor is ready for redecorating.

Complete specifications for Tri-Guards are listed on page 10.6/Tr of Sweets Catalogue.

NEW! Tri-Guards are now available in both stock and custom blended colors, to fit your wall treatment exactly. Check for quantity requirements on custom orders only. No minimum order on the eight stock colors.

- Tri-Guards Clear Corner Guards
- Wall-Guards
- Drape-Guards

When the design of a "corporate campus" windows, only Norco

Designed as a corporate campus to reflect the company's creative energy, these beautiful buildings

Building these very special custom windows for Marketing Corporation of America's "corporate campus" design would test any window company's capabilities. Norco came up with *all* the right angles to pass every test with flying colors. Only Norco was willing to take on the project *and* back it 100%. (Which, by the way is Norco's corporate policy on every job.)

And Norco's engineering staff reacted fast to finalize the design of these challenging custom windows in a matter of just ten days. As a bonus, Marketing Corporation of America gives Norco extra credit for coming up with some interesting new angles that kept the cost within budget.

The quiet mullion.

On the finished product, the right

angle turned out to be right angles *and* 45 degree angles.

The ultimate test here was designing a mullion that was the strong silent type. Strong enough to support the weight of stacked windows. But thin and "quiet" enough not to intrude on the grand view of the New England countryside and the stately, Saugatuck River.

In a class by itself.

Marketing Corporation of America's new buildings reflect the tempo and enthusiasm of the company perfectly. As good corporate citizens, they fit serenely in the calm of a fine Westport residential neighborhood. Yet they encourage an explosive brand of marketing creativity that serves a blue-chip list of national clients.

Norco receives high marks from both

the architect and the builder for design, on-time delivery and a quality product that went together with precision accuracy at the job site. On Marketing Corporation of America's "corporate campus," Norco

The project called for two unusual window designs: Right angle window

Why is an ICF Kitchen a little bit better? Because Luigi Massoni pays attention to details.

Because, not only is the Glacé Kitchen made in several genuine wood veneers, it is also offered in polished high-gloss colors (a finish that requires 43 separate hand operations to achieve).

...for each size cabinet, there is a wide selection of interior components, to utilize optimum storage space efficiently.

Because there is no visible hardware to detract from a clean-line minimalist design.

...the structural panels are 3/4" thick (unlike most others which are 5/8" or less).

...the backpanels create an impenetrable barrier against mildew and humidity.

Because custom-size cabinets are offered to create wall-to-wall, floor-to-ceiling installation.

...spare parts are always available to make later changes or to move.

We hope you'll agree, an ICF Kitchen is not just a little bit better, it is the best!

Jens Risom on designing the new Informa™ Group of library furniture.

"To design enduring furniture, it is always necessary to put preconceptions aside and immerse oneself totally in the world in which the furniture will be placed. Nowhere is this more important than in designing for today's library.

"The computer has brought tremendous changes; access to and easy use of equipment have become paramount. Paradoxically, high-speed printers have made the need for paper management more pressing than ever. Then there are the many practical details to be considered. What does one do, for example, with all those wires? All this must be answered by specific features that work together in a unified totality.

"Equally important are aesthetics. Today's library furniture ought to be 'user-friendly' in ways that go beyond placing hardware in convenient locations. Each piece should express a comfortable warmth and a personal respect for the librarian, the patron, and the institution that brings them together. Such respect is evidenced not only in design, but in execution. This I prefer to entrust to a company like Gaylord, whose reputation for uncompromising quality is long established in the library field.

"The Informa Group represents my best efforts to integrate all these elements into a flexible, modular system of furniture that I hope will not only reflect but help to define the modern library."

Introducing Cordura[®] for upholstery. Made tough to survive the corporate jungle.

Contract upholstery will never be the same, now that DuPont brings CORDURA* to the office. CORDURA nylon has proved itself tough enough for backpacks and luggage, durable enough for hunting gear and boots.

It exceeds the standard Wyzenbeek Double Rub Abrasion Test by such a wide margin that an even more stringent Wyzenbeek Test had to be developed (see results at right).

And CORDURA is a soft touch indoors. We've given it a luxurious hand, a satisfying touch and a smart look that make the most of fabrics for contemporary or classic furniture.

Fabrics of CORDURA nylon are available in a whole range of colors, styles and weaves. In 1000/280 denier, or newer 2000/560 with an even softer surface.

For good looks with strong character, ask about CORDURA. Contact DuPont at (215) 855-7765, and let us give you samples, specifications and names of suppliers.

CORDURA. The survivor.

More stringent modified Wyzenbeek Abrasion Test.

Polypropylene

Polypropylene failed at 164 double rubs.

Spun Nylon

Spun nylon failed at 445 double rubs.

Cordura

CORDURA hardly affected after 445 double rubs. Failed at 1,464.

Record Houses 1987

Eccentric houses, like eccentric people, can be uncommonly engaging or insufferable beyond measure. One's response often depends on whether the singular phenomenon, human or architectural, seems spontaneously original or self-consciously bizarre. Looking back, nearly every edition of RECORD HOUSES has included at least a few structures that arguably belong in either category. We believe that this year's collection boasts more than the usual share of eccentrics, in the best sense of the word; we hope (as always) that departures from the norm, inspired by genuine conviction and individual genius, may offer fresh perspective on common values. The risks are obvious, but then there are risks in complacency, too. It would be sad, for example, if the widespread acceptance of "contextualism," salutary though this idea is, were to turn us against idiosyncratic design on principle—especially in the realm of the single-family dwelling. No other building type potentially offers the architect or the inhabitant such free range for personal expression, or for adapting to the particular character of a unique site. Of course, just a glance at the wide open spaces outside the villa on our cover, or inside the urban residence rendered graphically below, is reminder enough that our subject is not mass-production housing. Even when available space and budgets are tight (and we do show several projects where these constraints apply), Record Houses occupy a relatively privileged, increasingly rarified, realm of enlightened patrons and specially commissioned art. Not surprisingly, we present one residence designed as a precious artifact, another intended as a collector's gallery-studio-home, and another created collaboratively by an architect and a painter. The results stand out in high contrast to the standard-container-with-appliances that many Americans gratefully call home, and that too many others long for in vain. Considering the current norm, our few eccentrics stand to teach us more than ever about the way we all live now—or wish we could. *Douglas Brenner*

Bjornson House, Arata Isozaki & Associates, Architects

Private Residence
Ligonier, Pennsylvania
Roger C. Ferri & Associates,
Architects

A modern idyll

Not one pothole mars the dirt lane that winds through Pennsylvania woods as discreetly pruned as the shrubbery of an English park. Behind every mountain laurel, rock, and waterfall, one senses the constant husbandry of unseen hands composing the local color of the western Alleghenies into an Arcadian pastorate. The country house Roger Ferri designed for weekend residents of this idyllic domain embodies a congenial sensibility, a patrician taste for beauty whose quiet refinement almost belies the efforts that sustain it. Almost but not quite, since there is no mistaking the ambition or fastidiousness of Ferri's architecture, or, implicit in it, the connoisseurship of his clients. Their program was ordinary enough: a sunny, airy, comfortable house, with all major rooms at ground level overlooking a nearby trout stream. And though they insisted on elegant materials and superb craftsmanship, the owners specified no particular style; they asked simply for a work of art. The result is exquisite—and *sui generis*.

Photographs of the building tend to emphasize curious details which, being strange and ambiguously familiar all at once (Minoan? Chinese? Jugendstil? . . .), move one to question whether the design is eclectic, original, or just *outré*. Unlike the Norman farmhouses, Cotswold cottages, and Early American homesteads on nearby estates—and despite a material palette borrowed from local vernacular building—Ferri's villa eludes conventional art historical typology. On site, however, stylistic analysis gives way to astonishment that something so exotic seems so very much at home where it is—as though one had stumbled on the sacred precinct of an archaic civilization, miraculously intact in a neighbor's garden. This mythic aura derives largely from an all-pervasive physical and esthetic rapport between architecture and nature. A roughly U-shaped layout at the edge of a forest clearing effectively orients living spaces for sunlight, views, and cross-ventilation, and affords two symbolic thresholds: a ceremonial forecourt tied to distant meadows, and an intimate outdoor atrium opening onto a terraced, stagelike mound, which descends into what the architect calls the "pillared hall" of the wooded flood plain. A castellar entry tower and outsize portal, battered plinths, and broad cornices imply protective enclosure and a quasi-urban dignity around the "public" perimeter, in contrast to the more extroverted, domestic-scale french doors and pitched roofs of the "private" sanctuary it embraces.

Ferri skillfully avoided too simplistic a hierarchy by massing his linked pavilions in asymmetrical clusters of varied height, sculpting the terrain in sinuous contours, and plotting an oblique path of arrival, rather in the manner of ancient Greek temple compounds. From every angle the structure seems to advance or recede in syncopated rhythmic counterpoint to the landscape. Fanciful details enliven this tectonic dance: columns flaring upward to winglike fascias appear to rise from an earthbound podium like caryatids on *pointe* or phototropic plants, and suggest that the timber walls behind them are an infill of nearly weightless screens; cup-shaped windows (recalling antique Cretan bull's horns and Egyptian papyrus-bud motifs) and ponderous masonry piers mysteriously ennoble the homely shelter of a screened back porch; and a bold turn of a corner lays bare the fictive monumentality of a "giant" order applied to one-story *frame facades*. By reversing the onlooker's expectations, these mannerist games with mass, scale, and decorum not only dramatize the play of forces specific to architecture, but heighten one's enjoyment of artfully manipulated nature. The pleasure pavilion is nonetheless most voluptuous indoors. Above all in the long, vaulted gallery of the living and dining room, Ferri has infused static volumes with an empathetic sense of animation, density, and warmth. Solid woods and richly figured fabrics combine with complex curvaceous profiles and ample proportions in an ensemble of positively Edwardian luxury and ease. That it is by no means a revivalist pastiche makes this seductive interior oddly disconcerting: perhaps we have lost our faith that art objects produced in our ironic, hasty age can exude such confident *joie de vivre*. *Douglas Brenner*

The painted wood, weathered copper, and fieldstone used here are traditional building materials around Ligonier, although the compressed strata, deep-set mortar joints, and canted profile of Ferri's masonry also evoke more archaic European precedents. An emphatically unclassical timber colonnade magnifies the apparent scale of one-story cedar-sided facades (and affords a seasonal sun shade).

The 18- by 36-foot expanse of the living/dining room, punctuated by tall oriels, recalls the proportions of long galleries in English country houses and in early domestic interiors by Frank Lloyd Wright (a likeness underscored by Wrightian banding of the vault and lowered eaves). Ferri's originality prevails in the fugal orchestration of upswept curves that enlivens the entire space, from the swoop of fiddlehead soffits to the coils of andirons and wall sconces, and the delicately bowed stems of torchères and dining-table pedestal (all architect-designed). Elliptical and tangential rather than circular and concentric, the subtly varied geometry gives each elevation its own rhythm: compare, for example, the almost baroque counterpoint of concave doorheads, serpentine fireplace, and oval medallion at the gallery's west end (below left) with the calm, sustained harmony of concave lintels and arched niche at the east end (above and opposite). Echoing the oblique approach from drive to front door, the plan (page 78) defines diagonal pathways and vistas that enhance one's appreciation of spatial complexity. Intersecting orthogonal axes draw the eye outward through north-facing french doors to an open courtyard, transitional stepped terraces, and the "wilderness" beyond (a connection made audible by the waterfall of a manmade weir nearby). Décor complements the role of the house as a civilized belvedere overlooking nature. Woodwork is solid mahogany. Upholstery covers are Venetian cotton and silk. The painted landscape is by Fairfield Porter.

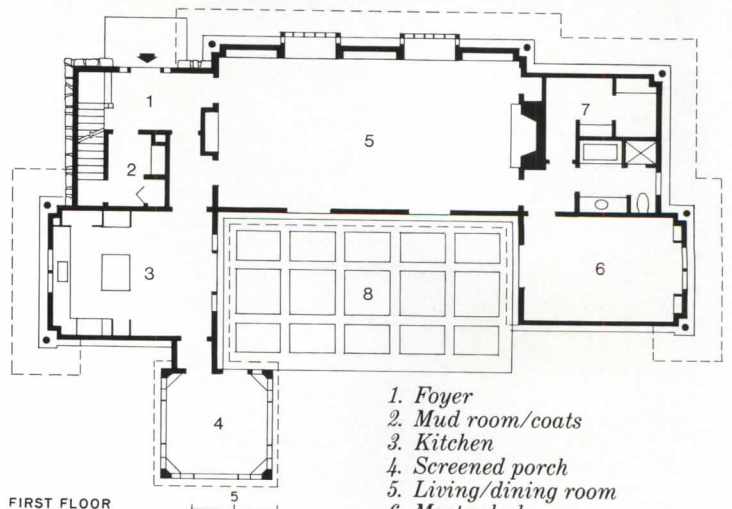

Roger Ferri's parti expresses major functional elements as discrete pavilions, held together in a shifting balance of symmetry and asymmetry. Internally, a distinctive ceiling configuration reflects the uniqueness of each volume, while reiterating a leitmotif of gravity-defying architectural levity. A tentlike pyramid rises above the master bedroom (opposite left); the airy canopy of a shallow groin vault

spans the tower guest room (opposite right). Here, as in the living/dining room, color-stained plaster walls picked out with pencil-thin outlines of complementary hue, delineate solid geometry. (Patterned batiks and carpets add another layer to the play of figure and ground.) A more intricate flourish to Ferri's ornamental themes and variations appears in the mahogany-and-maple staircase just inside the front

door (opposite). Besides embodying a formal kinship with curvaceous and tapering profiles throughout the house, the balustrade honors the structure's unifying spirit of exuberant upward growth. The stair rises from a newel-post finial shaped like a closed bud to another post whose inverted-bell terminus (a diminutive version of exterior column capitals) suggests an opening flower.

Domestic arts

Shope House
Greenwich, Connecticut
Shope Reno Wharton Associates,
Architects

Diminutive size and do-it-yourself homebuilding generally do not occur in the context of back-country Greenwich, Connecticut, a neighborhood given to large estates and horse farms. But one look at the countryside—high, rocky, wooded, dappled with lakes and ponds, and wilder than one might expect—makes it clear why the land is so esteemed. Thus Allan Shope, a former country boy from upstate Connecticut who now practices architecture in Greenwich, jumped at the chance to acquire two and a half acres reasonably, particularly since the building lot is circled by 40 acres of wilderness protected by the township and since the local wildlife includes bobcats, tame deer, and bass for the catching.

Even when his house is far smaller than ordinary, an architect cannot rest content with mere shelter or the unexamined esthetic. Accordingly, Shope lavished considerable artist's thought on his design, narrowing his sights to a single concept so as not to overwhelm the little building. The single, though complex, concept is "the integration of a simple form with a natural element that inspires awe in the beholder." The natural awe-inspiring element on which he focused was "the contrast and movement caused by light. Both moonlight and sunlight were of equal importance." Also important was the seasonal contrast between the warm, colored light of summer and the cold, silvery light of winter, not to mention the contrasting shadows cast by trees in blossom or by the leafless boughs of winter. The tool for exploiting these contrasts consists of 12 custom-built colored, leaded windows, carefully placed both to admit shadows of clouds and trees and to cast their own shadows on white walls (see following pages).

The house's massing favors the image of the traditional New England cottage, the weathering shingle walls supporting a steeply pitched roof with deep overhangs and paneled soffits, traditionally meant to shed snow and falling leaves. Square flat-topped towers at each end, however, recall not down-to-earth Yankee practicality but rather the more romantic 19th-century Italianate villa. One tower contains the stairwell and carries a wisteria trellis (opposite), the other encloses a chimney (right). Glassed doors flanking both towers make the end elevations symmetrical and at the same time establish view corridors to the outdoors for anyone entering the house.

If the towers seem overscaled, the appearance is caused chiefly by the comparative sizing of normal chimney and smaller than normal house. But the apparent discrepancy has major significance for the house's performance. The architect reports that the fireplace and its warm chimney provide about 90 percent of the house's heating needs. (The owners are currently burning logs from the few trees that had to be cleared from the site.) Moreover, the three large windows in the stair tower face south to capture sunlight shining through bare branches in the winter.

Though it has only two rooms in 500 square feet, the house was not cheap: \$150,000 plus the equivalent of the owners' labor. Much of this cost has to be attributed to such handwork as the beautiful windows and custom-built cabinetwork. Otherwise, the Shopes and friends performed all construction work, including clearing the site, digging trenches for footings and the slab, and pouring concrete. (From time to time, they would cleanse and refresh themselves with a dip in the lake downhill across the driveway.) *Grace Anderson*

The Italianate towers at either end of the house not only encase stairs (opposite) and chimney (above) but offer imposing exterior display space for the ornamental windows and their complexly patterned leading. The same square windows are set into the side walls to light the house's downstairs room. At the base of the chimney tower, a small shed roof protects a pair of doghouses, inside which the Shopes' two Labradors warm themselves against the bricks backing the fireplace.

The ground floor of the two-room house functions much like the traditional New England kitchen, with space for cooking (right), eating and reading (left), and conversation and entertaining throughout. Because glass on all four sides admits such an amplitude of light and views, the Shopes found that the visual richness so competed with their paintings and prints that they took them all down. The building materials themselves add considerable richness, not only the leaded windows but the oak flooring and the oak beams. The closely spaced exposed beams are a conscious stylistic break with the prevalent New England form; Shope says that he took the form from Southwestern architecture out of admiration and for the strong axis it establishes on the ceiling plane. Beyond that, the wood had a certain sentimental value: the architect acquired the timber from a demolished McKim, Mead and White house. The same wood was used for stair treads and for new Shope-designed furniture that now replaces the Shope-built table shown opposite. The sconces above the fireplace and elsewhere in the house constitute another break with traditional country style: high-tech metal museum fixtures surmounted by specially designed lenses.

The leaded windows that adorn the living room and the stairwell (opposite and bottom left) have approximately 600 pieces of glass each. In addition to the leaded geometrical patterns, the pieces of glass vary in density, texture, color, and chemical composition, subtly fracturing one's view out as well as throwing constantly shifting colors and patterns on the white walls according to weather, time of day, and season—then ringing a new set of changes by moonlight. The glass includes such off-the-shelf types as etched bathroom glass and small beveled strips and such special types as what the architect calls "silk" glass—a randomly rippled glass seen in the central panes. Shope reports that Thomas Finsterwald, who built the windows, keeps a large collection of colored glass, amongst which he picks and chooses much as a painter uses his palette.

Family business

Salasky/Sedel House
Virginia Beach, Virginia
Bentley LaRosa Salasky, Design,
Architects

There are two roads into Virginia Beach, and the more-traveled one leads to the Salasky/Sedel house. "You can't miss our place when you come to town," says co-owner Arnold Salasky. Although prominent beach, not street, frontage is usually the thing to boast about in a resort area, builder/developer Salasky and his partner (and cousin) Jon Sedel had a different agenda in their unlikely choice of a roadside site: exposure, like this, is good for business. Besides constructing condominiums and shopping centers, year-round residents Salasky and Sedel also build houses for themselves, which they subsequently sell for a profit. For their latest residential venture, the duo invited New York-based Bentley LaRosa Salasky, Design to compete against three local firms for the commission. Salasky and Sedel selected the out-of-town architects, citing their innovative solution to the double-house problem as the decisive factor. (The fact that BLS's Franklin Salasky is Arnold's brother might also have influenced the choice.)

Avoiding the conventional duplex parti of mirror-image floor plans on either side of a party wall, the architects devised a more flexible strategy of differently shaped but equal-size volumes—roughly a square and a rectangle hinged together by an observation tower—that together form an L-shaped enclosure for the swimming pool. A porte-cochère and driveway fill the remainder of the 80- by 120-foot site, which is surrounded by a wood and concrete fence that creates the effect of a stately compound (on a collision course with oncoming traffic, the fence is reinforced with steel along the highway).

Both clients were single four years ago, when BLS began schematic design. Arnold was immediately drawn to a centered unit of stacked rooms and overlapping spaces while Jon, conveniently, preferred a linear one of rooms enfilade. Since then Arnold has married and had a baby, and Jon has reconfirmed his bachelorhood; what began as a formal contrast of volumes is now serendipitously conducive to disparate lifestyles. Marital status aside, however, both clients have always had certain requirements in common: privacy from the street, southern exposures, views of the ocean to the east from upper floors, and semi-enclosed porches and patios for outdoor entertaining during the extended summer season. BLS accommodated all of the above in each of the two houses, along with a living room, dining room, kitchen, and three bedrooms and bathrooms apiece—all under a varied assortment of gables and dormers. Although the resultant roofline may look frenetic from the highway (previous pages), especially within a frame of traffic lights, power lines, and directional signs, it is not an ad-hoc assemblage. On the contrary, as a view of the front elevation reveals (photos left and opposite), the composition of square, rectangular, and round openings is held together by a material palette of dove gray shingles, Bahamian pink stucco, and turquoise and cream trim. While the fragmented massing and purposefully plain portico relate the complex to a hodgepodge of bungalows throughout the community, endearing idiosyncrasies distinguish this house from the built-on-spec genre that surrounds it. Moreover, the architects' attention to detail made the most of the standard building products that the conservative budget and the clients' regular suppliers imposed. Note, for example, the whimsical grace note of tapered porch piers or the subtle rhythm of alternating rows of wide and narrow cedar-shingle panels (a trick inspired by a firm field trip to the Jersey shore). The architects also brought their "fun with shapes," as partner Ronald Bentley describes the esthetic, into the interior of both houses, where curved soffits over windows suggest valances, and niches are filled with built-in benches or bookcases.

Although Arnold and Jon did not intend to settle down permanently in their new compound, the peripatetic partners are now having second thoughts. The decision whether to follow through with their original plan is no longer strictly business: Arnold's wife, Ava, who is contemplating future additions to the family, wants to stay.
Karen D. Stein

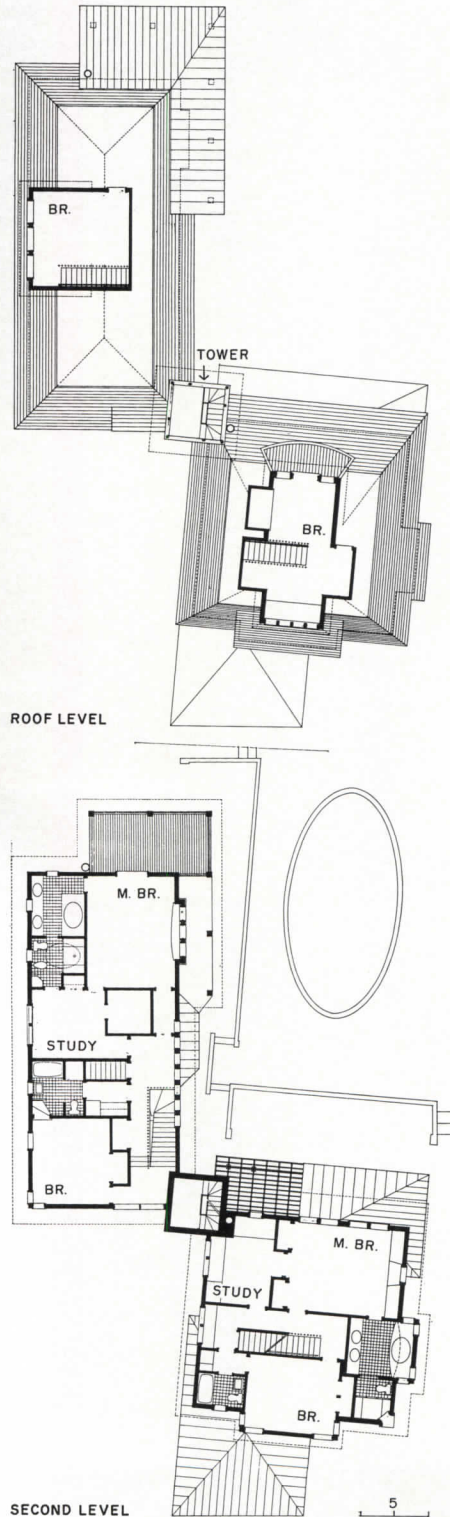

Instead of twin duplex units connected by a party wall, architects Bentley LaRosa Salasky created two different layouts of approximately 2,700 square feet, each of which has four exposures. The facades facing the swimming pool are lined with sliding glass doors and a varied assortment of windows for maximum southern light (photo previous page), while the other sides of the house were punctured

sparingly for more selective views (plans, at right). Bleached—and in one unit, pickled—oak floors and painted wood cabinetry complement cream-colored interiors. Balusters that screen both staircases (and accentuate the opening between the living and dining rooms in one unit), repeat the pattern of exterior sunscreens, railings, and porte-cochère.

Double identity

Doublehouse
Seattle, Washington
A₂Z, Architects

The traditional, Father-Knows-Best family of dad, mom, and the three kids has been supplanted these days by increasing numbers of single-parent households, unmarried couples, and adults living alone. Though life in the suburbs has changed, suburbia hasn't: moving to its tree-lined streets still means buying a conventional, single-family house. In addressing the urgent need for innovative residential prototypes for the *un*traditional family, developers and architects might well study one alternative in Seattle called Doublehouse. Distinguished by two pitched roofs, one atop the other, the pair of low-cost units houses single adults or couples within small-scale infill at the rear of a typical suburban lot.

The unusual form of Doublehouse is the product of an unusual combination of talents: Norman Millar, an architect, Sheila Klein, an artist, and Ries Niemi, an industrial designer and fabricator, who are the partners of the Los Angeles-based firm of A₂Z. Its design began routinely as a commission for two brothers on a budget, Peter and Thomas Scribner, who assigned the young trio to create a couple of apartments for the backyard of their bungalow, one of which would be rented to help pay the mortgage. Peter Scribner, formerly an urban planner with the Seattle Parks Department, envisioned the new addition as an L-shaped arrangement of one-story "urban cabins," each laid out as a studio with kitchen, bathroom, and sleeping loft. Undaunted by the \$50,000 initially allotted for the construction, architect Millar consolidated the original plan by repeating the units as a pair of 15-foot cubes stacked vertically (section), and set about distinguishing the simple volumes of the two "houses" with the assistance of partners Niemi and Klein. "We are committed to using common North American materials with economy and grace," Millar asserts. A₂Z's penchant for making the most out of the cheap and the ordinary is also evident in the firm's do-it-yourself designs, including a "ready to walk" line of linoleum rugs, a cage for comedian Pee-wee Herman's cat, and an audio-visual room called "DomeHome," which Klein describes as "a cross between Star Trek and a chateau."

As A₂Z's first freestanding building, Doublehouse exudes the same witty ingenuity as the firm's rugs, furniture, and interiors, and proves that its designers, behind their zany facades, are completely serious. Its deceptively simple form, proportioned to harmonize with the clients' early 1900s bungalow, is intended to look "timeless," according to Millar who, with Niemi, went so far as to devise a theoretical, high-rise version of the piggyback units called "Muchohouse." To avoid the innocuous image usually associated with low-cost housing, the partners decorated the timber frame and staircase like a steamer trunk, edging the doors, lintels, stair rails, beams, and sills in the same galvanized sheet metal used for the flashing (left). Even this sensitivity to craftsmanship proved cost-effective: the construction of the two units totaled a low \$66,000. Combining the art of custom homebuilding with the economics of spec development, Doublehouse offers a refreshing hybrid of suburban and urban living. Part of its success as a prototype for a new-age suburbia is, no doubt, due to the unorthodox attitudes of its designers, who ignore the traditional boundaries separating not only building types, but professional disciplines. Klein succinctly discriminates between the fine and applied arts: "The difference between art and design is this: art has guts and design has manners." Doublehouse has both. *Deborah K. Dietsch*

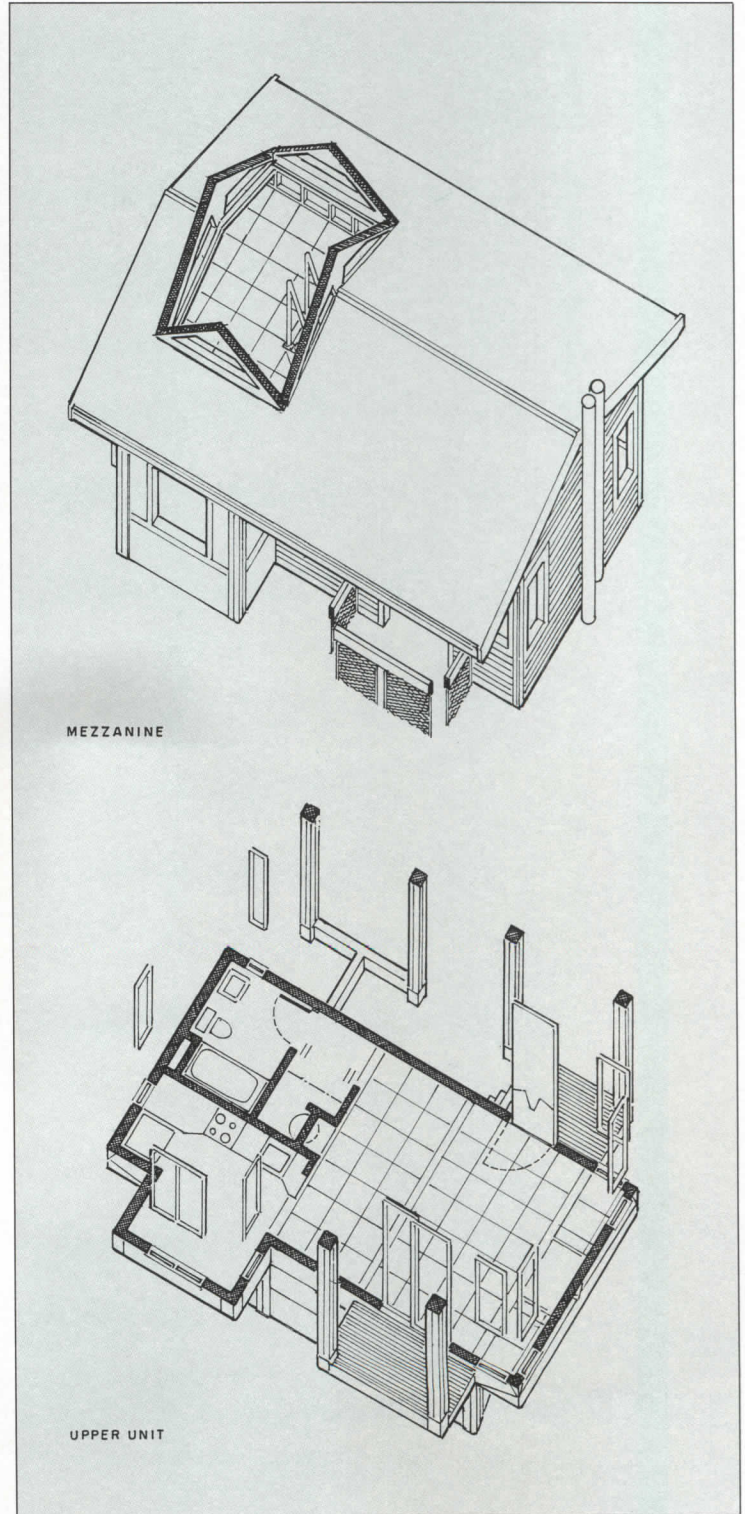

Both Doublehouse units are organized according to the same efficient plan—central living area, dining alcove, kitchen, bathroom, and sleeping loft—but each assumes a distinctive character through changes in section and handcrafted details. The simple, timber-frame construction and pitched roofs that convey the image of two separate houses from the outside are also expressed inside (axonometric drawings). While the upper unit is nestled under the top roof (right) with rafters left exposed (above), the lower unit incorporates the walls above its eaves in order to accommodate a higher, pitched ceiling and to heighten the sleeping loft (left). The lofts are reached from the living rooms by steel ships' ladders with fir-trimmed handrails (above and opposite), designed and fabricated by A₂Z partner Ries Niemi, who also created the galvanized sheet-metal baffles for the units' future wood stoves and kick plates on the doors (bottom left). This sensitive detailing of ordinary finishes is extended to the floors in a pattern of vinyl and Masonite tiles

designed by artist/partner Sheila Klein. To provide light and air in the sleeping lofts, architect Norman Millar crowned the top unit with dormers (above and right) and furnished the lower loft with a pair of clerestories above the roof. Angled to echo its pitch and reminiscent of Northwest Indian art, they look like eyes borrowed from a totem pole (top photo, opposite).

Mahoney Residence
Mattapoisett, Massachusetts
Peter Forbes and Associates,
Architects

Entire of itself

Set well inland on its island plot, the Mahoney house cold-shoulders the north with a near-blank shingled facade (preceding pages) but opens fully to the cedar grove and sea views on the south. Though only the garage/guesthouse is truly a separate element, the house presents itself (photo and drawing below) as a trio of discrete but interlocking volumes—parents' year-round home, vacation quarters for grown

children, and central tower with top-floor eyrie and first-floor tunnel. In the main wing, big square windows expand to a continuous glass wall shielded by massive, independently supported hurricane shutters (photos facing page) that, when open, line the deck with protected private niches. As befits an area renowned for its boatbuilders, the fir-lath shutters are braced by stainless-steel cable tightened with turnbuckles.

Not for Peter Forbes the Modernist cliché of the house as a machine for living, but the mythos that a dwelling should not only embody the quotidian rounds of its occupants but satisfy the atavistic impulse toward possession of one's own special corner of earth. So while his houses are highly individual—even eccentric—in their modes of responding to their owners' spoken desires and unspoken dreams and capitalizing on the particular qualities of the chosen site, they have in common an intimate, knowing relationship with the land as well as a simple, accessible geometry, often based on cubes and pyramids, that dignifies and orders the small ceremonies of daily life.

The setting of the Mahoney house, which is both the year-round residence of the couple and a vacation retreat for their grown children, derives particular resonance from the memories of the *pater familias*, who as a small boy growing up in the nearby village played along the beach and among the cedars and tangled scrub of the low narrow island jutting between Buzzard's Bay and Mattapoisett Harbor. Here he absorbed the harsh beauty of the land and its unbroken prospect south across the bay to the barrier islands and open sea beyond. The successful attorney who much later acquired his childhood playground for a home site also recalled, though, the serpents in his paradise. The open vista to the sea, for example, is also an open passage through which every hurricane striking the New England coast since 1877 has swept to lash the island shore. In addition, the island is bridged on its inland edge, where it joins a saltwater marsh, by a causeway that in summer generates heavy traffic crossing between the town on the east and public beaches on the west. To these practical site constraints, Forbes added the proximity of the village's small 18th-century houses, separated from the eastern edge of the island only by a tidal stream.

In keeping with the dual program, the parents' year-round home and children's vacation quarters occupy discrete wings on either side of a central entrance tower—a donjon pierced by a triangle-arched passage that raises the mundane act of entry to a rite of penetration to a private domain of land and sea. The actual entries to the house, however, are unobtrusive side openings that detract from neither the ceremonial role of the passage nor the differing attitudes with which the wings confront the tower: the parallel main wing with the tentative nudge of a glass-walled vestibule; the splayed summer wing with an abrupt, random-angled collision.

The breach in the tower gains visual impact from the chaste closure of the long low-slung wings, which turn their unbroken faces to summer's traffic noise and winter's cold northern blasts off the wetlands. Inside, the main wing is fortified by a continuous storage wall lining the circulation path. To the houses across the stream on the east, the structure addresses a neat gabled elevation of like modest demeanor; to the broader New England context, the kinship of homely materials and spare, Puritan-plain masses—albeit unconventionally disposed. The watchword for the rigorously simple detailing, Forbes says, was "crisp." But the execution is never rudely curt and, indeed, absent cornerboards or other signals of shifts in vertical plane, the shingle cladding reads as a seamless silvery membrane drawn taut around the connecting volumes. Horizontal lines, however, are decisively scribed to underscore, as in an O'Keefe painting, the continuum of the house with its foreground cedar grove and beach, midground of bay and low-lying islands, and horizon of sea and sky.

On the south side of the house this outer vista merges with rooms strung along the 100-foot length of the main wing and continuously walled with triple-hung windows that, when raised, compose a loggia giving access from every room to the adjoining deck. Here 10-foot-square wooden shutters hung from steel bents march at 20-foot paces. Closed, the shutters form storm barriers across the vulnerable glass facade; open, they define outdoor rooms sheltered from the blazing summer sun and relentless shore breeze—sketching in miniature the embrace of the house around its private island realm. *Margaret Gaskie*

A simple railroad plan centered on a "great room" (photos above and facing page) combining kitchen, dining, and living areas, strings study/office, guest room, and master bedroom at either end of a storage-lined north corridor. Atop the tower is a birds'-nest retreat reached via winding stair from the entry of the summer wing, which houses in addition to bedrooms an outdoor sunning pergola and showers.

Complicated by the need for hurricane protection, the south foundation wall deploys both inner pilasters to support pipe columns and an outer set to support the metal bents, anchored to a grade beam at the other end, that carry the shutters. Flitch beams between the columns substitute for lateral bracing at the curtain wall, while cable-and-turnbuckle rigging acts as tension chords for the gable.

A comfortable house

Hansen House
Wilmette, Illinois
Hammond Beeby and Babka,
Architects

If architecture's current fascination with history too often has produced buildings that are shallow parodies of past styles, it has also led to a welcome re-appreciation of once-neglected modes and building types. Take the residential architecture of the early 20th-century American suburb: scorned by Modernists as hopelessly derivative if not downright vulgar, the suburban house is now emulated assiduously by architects like Robert A. M. Stern and scrutinized by historians like Alan Gowans, whose recently published book *The Comfortable House* celebrates the stylistic diversity and social implications of American suburban architecture from 1890 to 1930.

One of the communities that Gowans might well have visited during his research is the Chicago suburb of Wilmette, a compact residential enclave on Lake Michigan that was developed largely during the first 30 years of the 20th century. Though clothed in a panoply of classical-revival and picturesque modes, the houses that line Wilmette's straight, tree-shaded avenues are essentially stylish variations on what Gowans calls the suburban foursquare—a two-and-one-half-story box that features a short flight of stairs leading to a full-width front veranda, a dormered hip roof occasionally crowned by a cupola or central chimney stack, and an interior floor plan characterized by four nearly equal-size rooms. In upper-middle-class Wilmette the basic foursquare was usually extended into an oblong whose overriding horizontality is quintessentially Midwestern and whose generous proportions seem to embody the American suburban dream.

Although the Wilmette house that Hammond Beeby and Babka recently designed for Eadie and Erik Hansen might at first glance appear to be simply a gracious exercise in stylistic neighborliness, there is a bit more at work here than just contextual sensitivity. True, the clients wanted a house that "looked like Wilmette," according to HBB principal-in-charge Tannys Langdon, and the stucco-clad, hip-roofed result does exhibit some of the outward characteristics of its progenitors. But the Hansens, a couple with two young children, also requested what might be considered a suburban anomaly: an elegant *small* house which, as Eadie Hansen puts it, "we won't have to sell when the children are grown."

The basic premise of a small house would not seem unreasonable, given the Hansens' modest two-bedroom, two-bath requirements and the physical limitations of their 50- by 175-foot lot. (While these dimensions are typical of lots in Wilmette, some local residents, perhaps hoping to retain a bit of open space in the densely settled neighborhood, felt that the narrow street frontage might preclude *any* building on the site.) The architects' real challenge, however, was the need to manipulate the apparent size of the diminutive, 1,500-square-foot structure to harmonize visually with the scale of its bulkier neighbors. Toward that end, they wrapped a broad veranda around either side of the house, extending the 22-foot-wide building almost to the property's borders. They also adhered rigorously to a well-ordered, Palladian symmetry and articulated each facade with a dignified, pedimented temple motif. Finally, by configuring the interior vertically, they raised the house to three full stories, or 28 feet from porch base to ridge line—a height roughly equal to that of adjoining dwellings.

At the same time they were creating an overall illusion of bigness, though, the architects had to work in the opposite direction in their detailing. Porch-rail spindles, for example, measure just 3/4-inch square, and custom-turned posts are so slender that near the end of construction the Hansens' carpenter hesitated to remove temporary supports, fearful that the posts would be unable to bear the roof's weight. The attenuated delicacy of the exterior, moreover, continues inside, where unusually tall windows and the vertical plan seem more akin to an urban town house than to a sprawling suburban villa. The Hansens' delight in these compact interiors underscores something that city dwellers have long known: that the enjoyment of domestic comfort owes as much to style as it does to square footage. *Paul M. Sachner*

Street and side views of the Hansen House (top and facing page) reveal a villa-like monumentality that relates to the ample scale of its neighbors. By contrast, the rear elevation (above), with its asymmetrical juxtaposition of porch and door openings, is meant to address a different context—the frequently haphazard rear alterations and additions on nearly all the adjoining properties.

Handcrafted wood details throughout the house, including a curved built-in bench in the bow-fronted sun room (below) and the newel post and door surround atop the main interior stair (bottom), were constructed by Swedish-born carpenter Ivar Svenson. A central skylight set among chimney quadrants illuminates the Hansens' third-floor master bedroom suite (facing page).

A studied simplicity

O'Herlihy House
Malibu, California
Lorcan O'Herlihy, Architect

There is an unacknowledged, but undeniable stylistic affinity between the pre-16th-century pueblo dwellings built by the Amerinds in New Mexico and the rigorous architecture of such early 20th-century European Modernists as Josef Hoffmann, Adolf Loos, and Walter Gropius. Separated by time and culture but united by a strict adherence to pragmatic concerns, the Indians and the early Modernists created architecture that relied on flat roofs, reduced all geometry to unadorned cubes and rectangles, and emphasized functional aspects of design over surface decoration. The hand-crafted, regional quality of adobe pueblos and the massed-produced esthetic of the early Moderns came together during the 1910s and '20s around Los Angeles, where Richard Neutra, R. M. Schindler, and, most notably, Irving Gill produced hybrid, "proto-modern" houses that successfully bridged the gulf between the arcadian Southern California dream and an emerging machine-age internationalism.

The stucco-clad house in Malibu that 27-year-old architect Lorcan O'Herlihy recently designed for his parents, actor Dan O'Herlihy and his wife Elsie, continues this significant California tradition. Located on a canyonside plateau high above Zuma Beach, the house is a cool exercise in restraint and a deliberate contrast to the dramatic landscape and cacophonous architecture of Malibu, the rich but unkempt stepchild of Los Angeles's tidier western suburbs. The 3,200-square-foot structure reflects not only the architect's stated predilection for the tenets of Modernism—O'Herlihy observes that while his classmates at California Polytechnic State University were drawing Postmodern ornament during the early '80s, he was still under the sway of Mies—but also his parents' request for a well-ordered, light-filled house-on-the-hill to replace the cluttered beachfront cottage that they had previously occupied.

In order to take advantage of intimate canyon views and distant Pacific vistas from the nine-acre site, O'Herlihy organized the house along two axes that intersect in the structure's entrance gallery. The principal, or canyon, axis begins at a low-walled parking area, extends along a 66-foot, vine-covered pergola, and passes through the house before terminating in a backyard swimming pool pressed against the canyon's edge (overleaf). Along the way an irregularly shaped gravel courtyard—loosely enclosed by the house, a separate garage/guest room, and the sloping canyon—catches the afternoon sun. The secondary, or ocean, axis traverses the living room, drawing one irresistibly toward a 10-foot-square window that frames a perfect coastal landscape. The scale of this window is typical of the commodious, even oversized proportions throughout the house: 17-foot-high elevations are generous by any current standard; so are sturdy, 13-inch-deep walls, whose thickness was dictated by a climatic consideration (high wind conditions in the area required 12-inch-wide framing studs) and by the architect's wish to "ornament" his chaste, white-painted facades with deep window and door reveals.

Inside, the O'Herlihy's philosophy regarding rooms and their dimensions might be summed up as "few, but big." Ceilings are all a lofty 13 feet high, and the 35-by-24-foot living/dining room seems downright baronial. Still, despite these ample dimensions, the interior comes across as comfortably, if not exactly cozily, domestic. A coating of plaster over conventional gypsum board softens sharp, rectilinear wall surfaces, and such time-honored details as beamed ceilings and Mexican glazed-tile floors, together with the O'Herlihy's collection of rustic, mainly Spanish furniture, contribute unmistakable regional character. And while the architect prefers to dwell on the almost ascetic minimalism of the exterior, speaking warmly of progenitors like Le Corbusier, Kahn, and Barragán, there is nothing incongruous about the building's Mies-meets-Mission mode. Responsive to local culture, climate, and topography, its studied simplicity is a welcome alternative to the mindless stylishness that characterizes so much of Malibu's recent residential architecture. *P. M. S.*

Shimmering California sunlight and striking Pacific Ocean views dictated the south-facing orientation of the O'Herlihs' impressive living room (right and facing page). Although Lorcan O'Herlihy wished to celebrate a certain visual ambiguity between interior and exterior, he deliberately avoided placing terrace doors directly on axis with the entry, contending that that would have drawn people too quickly through the house and into the landscape. Instead, one first enjoys the view—and the living room—through an enormous 10-foot-square window before exiting via flanking french doors (bottom photo facing page). Thanks to Malibu's relatively smog-free atmosphere, nocturnal star-gazing is definitely encouraged.

The Villa Transformer

Schwartz/Fiekowsky House
West Stockbridge, Massachusetts
Schwartz/Silver Architects

On Friday afternoons, Sheila Fiekowsky and Warren Schwartz strap ten-month-old Julia Meryl into her car seat and head off in the family Honda for their place in the Berkshires. Judging by the cozy picture of domestic bliss that mom, dad, and the baby create, and by the modest builder's Colonial they leave behind in a Boston suburb, one might envision their weekend retreat to be some sleepy clapboard cottage with leaky pipes, gingham curtains, and a sagging front porch. Not so. As the briefest glimpse confirms, the house at the end of the two-hour drive from Newton to West Stockbridge is as alien to such preconceived notions of country life as any house could be (opposite). So alien, in fact, that some area residents think it looks like a UFO that has inexplicably, but permanently, touched down here in the land of Norman Rockwell. Others, naturally, see in its thorny crown of aluminum rain spouts an obvious, if quirky, homage to Lady Liberty. And then there are those who are convinced that the owners took the old saw about a man's home being his "castle" a little too literally.

To explain the mystery of the queer little house on the hill, we must backtrack three years to the owners' honeymoon in Italy. (Where else could they go? He is an architect with Schwartz/Silver; she, a violinist with the Boston Symphony.) After the requisite nights in Venice, the newlyweds took the well-worn road west to pay their respects, predictably enough, to the 16th-century architecture of Vicenza and environs. Though duly impressed with the genius of Andrea Palladio's Villa Rotonda, it was Vincenzo Scamozzi's Villa Pisani at Lonigo that captured the honeymooners' hearts. When Schwartz and Fiekowsky returned home, they carried with them a treasured souvenir: the powerful image of the Villa Pisani's great octagon rising above its massive square base on a grassy knoll. It was then that Fiekowsky decided she had had enough of hit-or-miss summer rentals during the Symphony's annual stint at Tanglewood; not surprisingly, when she suggested a new house to her new husband, the architect jumped at the design opportunity. The search for property that matched, more or less, the couple's memory of the Villa Pisani's site ended on a 16-acre hillside plot, six miles down the road from Tanglewood.

If Schwartz had slavishly copied Scamozzi—doing the best he could with the \$190,000 budget—we would have simply averted our eyes from the surely kitsch result, and pitied the poor architect his delusions of grandeur. But Schwartz prefers to leave pastiche to others, and draw inspiration, not facades, from history. True, the Villa Schwartz/Fiekowsky owes much to the Villa Pisani, but the model has been so thoroughly reworked, so completely redrawn in Schwartz's own, idiosyncratic hand, that we regard the house as an original. Assisting, of course, are the sprightly details and peculiar appurtenances that the architect devised to make Scamozzi's house his and Fiekowsky's own: the massive, aluminum "eyebrows" around the windows and doors; the whimsical, perforated-metal pyramid that sits on the stair tower skylight like some kind of high-tech dunce cap (left); and, of course, the proud, jagged crown that ceremoniously solves that most basic of architectural problems—getting water off the roof. Schwartz's goal in these quirky accouterments was to create a "timeless" building that would speak not only of the past but also of the future. For esthetic clues as to what the future looks like, he turned to those murderous-looking, Japanese toy soldiers-of-tomorrow ("transformers" to the cognoscenti), which arrive in 100 impossible die-cast pieces that only a child and Schwartz (whose collection recently topped the 400 mark) can figure out. One is relieved to note that, like the Scamozzi connection, the "Proton The War Lord" connection is more spiritual than literal.

Though Schwartz loads down his family getaway with a heavy referential package, the house shows no sign of strain. On the contrary, it exudes self-confidence. The key, of course, is control: knowing precisely—as Schwartz does—the point at which charming becomes cloying, serious becomes ponderous, clever becomes silly, proud becomes pompous, and playful becomes frivolous. *Charles K. Gande*

Although the elevations of the Villa Schwartz/Fiekowsky suggest that celluloid super-hero Mad Max had a hand in the design, the plans and sections prove that designer/co-owner Warren Schwartz abdicated his architectural charge to no one. For, despite the house's insouciant flourishes, it is actually a model of taut, rigorous efficiency. If the Boston architect strayed into the outer esthetic limits, he compensated for his foray by establishing a 20-foot dimension that he then used as a governing device to discipline the house. The second-floor conservatory, for example (actually, living/dining/kitchen), is a 20-foot cube whose corners have been carved away to create the faceted octagon rising above the four-square base, which accommodates 10-foot-cube bedrooms in three quadrants, and the stair tower in the fourth.

SECOND FLOOR

Schwartz and Fiekowsky may enter their weekend retreat by the informal ground-floor door, which opens onto an axis bisecting the four-square plan (far left), but visitors are routed to a much grander, ceremonial entry up the great stair (on the cross-axis) to the octagonal second-floor "conservatory" (left). The monumental stair is a vestige of an early—mercifully abandoned—scheme for the house in which Schwartz used an elephant as his model: the stair was the "trunk." (Can you find the tail?) Once they have ascended, visitors are confronted with the altogether pleasant options of remaining outdoors, on one of the roof terraces enveloping the octagon, or proceeding indoors for one of Fiekowsky's impassioned Bach violin solos.

If the exterior bespeaks Warren Schwartz's childlike fascination with such sci-fi film classics as *Forbidden Planet* and *Star Wars* (facing page), the interior bespeaks his and co-owner Sheila Fiekowsky's predilection for plain, of-this-world domestic accommodations (right). To some, this will come as a relief; to others, a disappointment. Despite its modest size (1,200 square feet) and simple amenities, however, the austere interior addresses the owners' first priority. Schwartz and Fiekowsky were intent on creating proper acoustics for her at-home concerts, which the architect achieved by means of skim-coat plaster walls, maple floors, and an exposed spruce ceiling held aloft by umbrella-like, black-painted-steel roof trusses. As a backdrop for the in-house performer, the architect erected a 10-foot-high partition that also shields the galley kitchen from view (below). To celebrate the completion of the house, Schwartz commissioned Harvard composer Robert Kyr to write a string trio based on the villa's structure. Fiekowsky and her two colleagues in the Copley String Trio will debut the piece this summer.

Collage with a view

This is the kind of house that seems possible only in Los Angeles. Floating above an enclave of modest bungalows, it looks hastily constructed, not quite permanently placed, like a great plywood ark unexpectedly washed up on the shore of Elysian Park. Its prosaic form appears to be predicated on the simple rule of building as much space as possible for the least amount of money, to provide the client with a do-it-yourself shell with some land left over for a garden and the dogs. Whether or not it pleases the neighbors, who are still wondering when that house on the hill will ever be finished, is obviously irrelevant. This part of L. A. is, after all, a no-man's land sandwiched between Dodger Stadium and the Golden State Freeway, a frontier of sorts even for the locals.

But don't let the rough exterior fool you—the Herman house is very much designed. If the cheap materials, ad-hoc composition, and unfussy detailing employed by its architect, Frederick Fisher, seem unorthodox to some eyes, others will instantly identify them as the current parlance of Southern California architecture. The master of this idiom, of course, is Frank O. Gehry, with whom Fisher once apprenticed. Like his former employer, Fisher is fond of the wrenched and the raw, and aligns himself with artists—both as collaborators and clients—to achieve the unexpected (an approach that resulted, for example, in a joint project with artist Eric Orr to transform the upper floors of a former factory into an ethereal loft with waterfall for a painter and her husband; *RECORD*, February 1985, pages 134-141).

For his latest project, Fisher was fortunate enough to be commissioned by Roger Herman, an energetic, German-born painter whose expressionistic canvases often depict shadowy buildings. That architect and artist should combine their talents in the design of the house was immediately understood. Their collaboration began with organizing a layout of multifunctional rooms modeled on Herman's former warehouse loft: a ground-floor painting studio; a second-story space comprising the kitchen, living, and dining "rooms"; and a pair of bedrooms that also serve as study/workrooms, linked by a series of decks. A third bedroom, originally developed as a freestanding box on the roof, was extended from the mass of the house to satisfy the artist's preference for the image of a turreted castle. Pleased with the solution, Herman was inspired enough to paint a portrait of the house soon after the first model was completed (left).

Fisher, who humbly characterizes his role in the design of the house as "keeping the facades coherent and creating a way to naturally light the interiors," likens the collaborative process to creating a collage. His method of assemblage is distinguished from that of his L. A. contemporaries by a preference for the graphic over the sculptural, a construction of overlapping planes rather than of disjointed volumes. The elevations of the Herman house, for example, incorporate steel-framed windows scavenged by the client from an industrial building demolished near his previous studio, as well as such custom components as the 10-foot-high front door, proportioned to accommodate large canvases. Punctuated by the roof deck that projects between the living area and bedroom "towers," the rectilinear pattern of openings and plywood panels on the street facade (opposite) exudes a self-contained monumentality that belies the wedge shape of the house and the sequence of distinct rooms contained within. Fisher's skill in composing mundane architectural elements into planar abstractions of tensioned geometries extends to the interiors, where natural illumination is manipulated through skylights and windows to bathe the walls and ceilings with sheets of light. Though the architect claims that the rationale for the Herman house is based on economy—"a tight budget forces you to make decisions that don't depend on the details"—its no-frills, no-gimmicks esthetic has exerted a profound effect on Herman. The artist has not only begun to paint more images of simple, boxy architecture, but has designed a building: a plywood doghouse for his two Great Danes. *D. K. D.*

Following the Los Angeles tradition of rooting buildings in the great outdoors, Fisher has sited the Herman house with views to neighboring Elysian Park and Dodger Stadium from roof decks that surround its plywood-sheathed volumes. At the western end of the house, a sturdy, wooden staircase connects the decks leading from the bedrooms on the second and third floors to the garden below (opposite). Contoured to the wedge-shaped lot, its floor plans (below) are organized with internal circulation relegated to the orthogonal perimeter along the street. The deck between the plywood "towers" that contain the living area and the bedrooms serves as an outdoor dining room shaded by a canvas awning (right). Both outside and inside the house, traditional decoration is shunned in favor of utilitarian elaboration, including the strips of metal flashing that define the four-by-eight-foot plywood panels (opposite and right) and the exposed wood studs, beams, and columns that grace Herman's first-floor studio (overleaf). Illuminated by stud-framed clerestories, it demonstrates the architect's predilection for planar compositions patterned in light and, as indicated by the canvases propped up against the walls, the artist's preoccupation with buildings in his paintings.

Edwardian evocation

Recalling architectural elements as familiar and comfortable as one's favorite easy chair, this country house re-introduces a lot of innovations that beguiled our grandparents—and which were later rejected as irretrievably out-of-date by the next generations. Interestingly, in their reincarnation here, similar design elements have acquired a new, although evocative, freshness.

Obviously, enough time has now passed for more objectivity about late 19th-century, Revivalist styles; and many are finding affinities in motivations between that period and our own: nostalgia and romanticism can ease malaise brought by a big change—whether Machine Age or Computer Age. Architectural historians are currently reveling in new books documenting that Edwardian era—and especially in British houses of the epoch that combined a bit of farmhouse vernacular with a touch of the Italian.

As chance would have it, both architect Stanley Tigerman and the owner of this house, a novelist, became interested in some of those books—and especially in a slightly eccentric, 1897 house called *The Barn*, in Exmouth, England, by architect E. S. Prior. The house was based on a simple version of a then popular “butterfly plan,” which was later elaborated by Prior and many others—including Edwin Lutyens in his well documented (but now demolished) 1903 *Papillon Hall*, in Leicestershire, England. In essence, the butterfly plan angled two or more wings from a central hub, and achieved design force from “a clash of gables.” The general desired effect was to create a new house which “might be old.”

Tigerman has created his butterfly plan by placing two wings, of about 24 by 32 feet each, at right angles, and abutting an eight-foot, octagonal knuckle containing the foyer, with the owner's study above. This disposition, adorned with such Edwardian delights as lots of gabled dormers, tall chimneys, bold gutters and downspouts (all tied visually together by a dark-painted, curving suggestion of a portico), gives an unexpected aura of compressed grandeur to a relatively small house. The two wings were planned so that one, containing general living facilities for the owner and a small daughter, could be closed off in winter, if desired, from the wing housing a two-story living room, porch, and guest room. The angles created by the wings were used to form a motor court in front, and a paved terrace behind to overlook allées cut through trees cascading down to a river.

Tigerman, in creating this evocative house, has possibly found a soul-mate in E. S. Prior—who, it has been said, “never went with the crowd, indeed his instinct was to go the other way.” Amidst Postmodernism, Tigerman seems to have found Premodern. *Herbert L. Smith, Jr.*

The house is only gradually revealed as one approaches down the entrance road (photo opposite). Because of its angled placement on a small, flattened area of the wooded hillside, views are usually foreshortened, emphasizing the verticality of the gables and bold downspouts. The dark, curved portico at the entrance (above) forms a horizontal, unifying element, and integrates various-sized doors and windows.

The full "clash of gables" effected by the butterfly plan is revealed on the terrace front of the house (below). Tigerman augments the clamor by adding two small, gabled porticos supported by Tuscan columns. One, over the kitchen door, houses only a bedroom closet (photos opposite above), while the other, over a door to the living room, is only suggested by a skeleton frame. Those little variations, together with a difference

in the window sizes, on the first floor of the kitchen and living room wings, are the only divergence from absolute symmetry in the stuccoed and slate-roofed facade. This balance is stressed by using a corbeled, dummy chimney (housing another bedroom closet) above the bank of screened-porch openings (opposite below).

The interiors also reflect a number of Edwardian planning and design favorites, such as the gallery serving as a little sitting space and hallway in the two-story living room (below left). The small foyer treats closets as paneled cupboards; the stairways are paneled with latticework, and one has a framed opening into the dining room (top photo below right), with its built-in china cabinets and buffet. All major rooms are entered

at the corners, which Tigerman feels adds a desired sense of "incompleteness" by giving diagonal vistas towards the opposite corner. The kitchen (opposite) is treated as a sort of inglenook—if one can consider the range as a variant of a chimney breast. It is framed by short columns on capped pedestals, handled with the same gusto shown in the cornice moldings and baseboards.

SECOND FLOOR ← N

The Sticks

Pardo House
East Hampton, New York
Smith-Miller + Hawkinson,
Architects

Architects Henry Smith-Miller and Laurie Hawkinson call this frame house “Sticks,” to distinguish it from two other residences, of different materials, that with it compose a trio dubbed “The Three Little Pigs.” The storybook analogy is intentionally loose: the house named “Bricks” is actually concrete block, what ought to be “Straw” is “Stucco,” and one suspects that the unidentified Big Bad Wolf is something fearsomely abstract. The chapters of Smith-Miller + Hawkinson’s three-part tale are, as they recently explained them, “investigations of the idea of an architecture formulated by program rather than style. The single-family house is often seen as a paradigm for contemporary thought regarding design, and as such we present these three theoretical exercises, all commissioned by real clients and designed for real sites.” Ronnie and Bruce Pardo, the clients for Sticks, had themselves grown impatient with style-obsessed New York architects by the time they approached Smith-Miller + Hawkinson. The Pardos were first attracted by a magazine article about an earlier project by the firm, “A House for Three Generations,” because it reflected their own desire for a country home based on the structure of family life—a place to share with their respective parents and two children. This goal was hardly novel, though its very ordinariness made it a fine subject for Smith-Miller + Hawkinson’s research into the impact of real-life requirements on ideal prototypes.

The architects customarily express this interaction through analytic drawings which eliminate solid walls and play up deflection and overlay in order to stress a fluid, temporal response to diverse contingencies. Evidence of this design process persists in the final layout of each of the Three Pigs, where skewed axes and divergent or compressed volumes visibly articulate and serve a family’s sometimes conflicting demands for individual privacy and community. Reconciliation of that dual imperative is especially obvious at Sticks, where the “extended” Pardo family must inhabit the compact 2,000-square-foot space allowed by a relatively modest budget. Within the self-imposed framework of narrow-span, two-by-four construction, chosen for economy’s sake, Smith-Miller + Hawkinson set out to stretch a basic spec builder’s kit of parts as far as it could go. The product of their ingenuity goes so far indeed that one might describe it as several houses joined in one. Conceptually, the parti evolved as the intersection of a centralized plan, supplying a common “public” focus, and a bilevel linear scheme, dividing private areas for different generations. Formally, the project took shape as an irregular cross between a Palladian four-square villa and an American shotgun house (or, as one guest described it, a train colliding with a station). From the classical side of this genealogy, Smith-Miller + Hawkinson took the idea of a pivotal rotunda, but pushed their cylindrical center hall off-center (and slightly outdoors) to acknowledge the oblique, variable orientation of their plan. On the other hand, down-home precedent inspired forthright treatment of the structure as a board-sided shed with standard contractor’s windows—a low-key foil to all the geometric high jinks and a suitable image for the Pardos’ rustic-suburban two-acre site.

On first approaching the house from the north, through the surrounding pine forest, visitors meet a plain if provocative welcome: a long entry facade comes to an abrupt halt at a tall, narrow gable end; tiny windows peer out with self-conscious reserve; barn-red siding shouts its presence amid the green of the pines and the ubiquitous gray-and-white of Hamptons architecture. Closer scrutiny reveals subtly rhythmic fenestration, an intriguing concave cut-out above the front door, and a curious jutting chimney bay that hint at complexity and contradiction lurking in the undecorated shed. Just around the corner, away from the driveway and the neighbors, the house literally expands and figuratively relaxes, thrusting decks and porches into a clearing to catch the sun. Though Sticks stands up solidly enough as a livable weekend home, the practiced eye can still appreciate where the huffs and puffs of theory have left their mark. *D. B.*

The skylit rotunda is at once a hinge and the center of gravity in a multidirectional plan (top left and opposite). This is also one of the few places inside the house where the interplay of centroidal and longitudinal plans is actually perceptible. A pivoting shoji screen at the base of the drum defines a foyer and breakfast room without interrupting the geometry of the cylindrical shaft. Adjacent to a ground-floor grandparents' suite, the breakfast room is a focal meeting place for all three generations. While not the sort of furniture in which to dandle a baby, Rietveld chairs and other modern classics comport with the geometric clarity of their surroundings. The living-room hearth (left center) likewise reflects Smith-Miller + Hawkinson's delight in basic solids and voids: "Everyman architecture," Smith-Miller calls it.

Her life for art

Bjornson House/Studio
Venice, California
Arata Isozaki & Associates,
Architects

I was thankful that I'd worn clean socks the morning I visited Teresa Bjornson's house in Venice, California, because the owner wouldn't let me in until I'd removed my shoes. She made the request in a pleasant but unapologetic tone, then pointed to a sign on the door bearing the signature, faux-naive style of its artist, David Hockney, and reading, sure enough, "No Shoes." After abandoning my alligator loafers, I was allowed to cross the threshold—only to be greeted by a half-filled, cast-iron bathtub on the left and a motorcycle with a train of neon exhaust on the right. In one of my characteristic flashes of insight, I realized that, Mercedes-Benz in the parking court notwithstanding, this was not going to be just another RECORD house call.

"She is a very special person," observes a smiling Arata Isozaki, who met Bjornson in 1981 while he was in Los Angeles to be interviewed for the city's new Museum of Contemporary Art (MOCA). The Japanese architect is referring, of course, to his client's somewhat eccentric habits (such as sleeping on a table rather than in a bed, to name but one), but, more importantly, to her passion for art. A former Merce Cunningham dancer, the now 38-year-old entrepreneur is a seasoned exhibition organizer and an indefatigable collector (the bathtub is actually Robert Rauschenberg's "For Aqua," the motorcycle, Mario Merz's "Accelerazione Motocicletta"). The art maven found a kindred spirit in her architect, whose wife, Aiko Miyawaki, is a sculptor, and whose portfolio brims with poetic accommodations for paintings and sculpture. In addition to the now-completed MOCA, Isozaki has designed the Okanoyama Graphic Art Museum and the Kitakyushu City Museum of Art in Japan. Though Bjornson's project was less grand than these, Isozaki was intrigued with her two-part commission: she wanted a house for herself in Santa Monica and a studio/residence for "visiting artists" in neighboring Venice. Bjornson's priorities being what they were, it is not surprising that she put Isozaki's barrel-vaulted house design on hold until the Venice project could be realized.

Bjornson may be a tireless supporter of the arts, but a Medici (or a deMenil) she is not. Her \$500,000 budget and 3,200-square-foot program suggested restraint, and Isozaki understood. He also understood that the artist end-users would prefer clean, open space, that wouldn't distract from the creative process, over an intrusive esthetic that might. Dubbing his solution a "simple, volumetric study," he, in effect, erected a loft which he then attached to a mini-house. The studio/loft is a luminous double cube—measuring 25 by 50 by 25 feet—whose corners have been sheared off and infilled with glass (opposite, and roofscape from the beach, below). White walls, wood floors, and as much natural light as Southern California has to offer are the great room's only ornament—save, of course, for the art. The minimal residential program was satisfied by another cube-and-a-half to the south (elevation page 142): the full cube houses the garage and a second-story bedroom, bath, and kitchen; the half, the ground-floor entry and lavatory and a second-floor dining room. But as yet, not a single artist has moved into the studio. After poring over Isozaki's plans for her Santa Monica house, Bjornson decided that her site "isn't good enough," and moved to Venice until she finds the perfect property. In the meantime, however, she has purchased 160 acres in the Mojave Desert, and invited, you guessed it, Isozaki to do the honors. *C. K. G.*

Despite its ramshackle appearance, Venice, California, is actually a showcase of avant-garde contemporary architecture. Frank Gehry, Hodgetts and Mangurian, Mayne and Rotondi, and Frederick Fisher have all built houses here, and now Arata Isozaki makes his debut in the funky, beach-side community. If there's a quasi-competitive spirit among the "local" talent, it did not infect the Japanese architect. The artist's studio and residence Isozaki designed for Teresa Bjornson is a model of unassuming modesty (right and below). Quite simply, the program called for as much space as the budget would buy, and Isozaki obliged by erecting an economical, wood-frame-and-stucco box that fills as much of the 30- by 130-foot site as the local building code allowed. Slicing off the box's corners not only satisfied the client's request for natural light, but also created—"accidentally," according to the architect—a traditional gable facade for the north elevation (opposite). Although Bjornson enjoys the anything-goes spirit of Venice, caution, she felt, was nonetheless advised: "There's always somebody around trying to tell you their life story." To ensure that they don't, Isozaki wrapped her site with a protective wall. Visitors are buzzed in through an electronic security door in the parking court wall on the south (plan page 115), and then snake along an unforgivingly narrow passageway to an almost-hidden entrance on the east. The only problem with the oblique entry sequence is that some people can't make it down the slender corridor. For Bjornson's full-figured guests, however, there is the north sculpture court entrance, where Klaus Rinka's stainless-steel water table and galvanized-steel four-legged table stand watch at the "back" door.

SHOES
NO SERVICE

"I wanted one beautiful, spacious room with harmonious proportions and fantastic light," recalls art lover Teresa Bjornson, who got it (left and opposite). The 1,250-square-foot studio with a 25-foot-high ceiling that fulfills Isozaki's client's request is being used at present as a gallery for select pieces from Bjornson's remarkable collection. As soon as she builds her also-Isozaki-designed houses in the Mojave Desert and in Santa Monica, the room with harmonious proportions and fantastic light will be emptied of paintings and sculptures and begin to serve its intended function as a working studio for visiting artists. At present, the great space is a living room (more or less). While its residential amenities are few, the owner does have a beautiful conference table from which to survey Sam Francis's 1967 "Permanent Water" (the large canvas at left in photo opposite), Robert Therrien's silver-plated "Untitled" (the three-tiered snowman in the middle of the room), Robert Rauschenberg's "For Aqua" (the bathtub), Mario Merz's "Accelerazione Motocicletta" (the motorcycle), Ed Ruscha's "90% Devil 10% Angel" (the narrow red canvas in photo opposite) and "SEX" (the blue canvas at left in photo left), and, not incidentally, David Hockney's "No Shoes" sign on the door.

If minimal, the residential portion of Teresa Bjornson's studio/residence in Venice is nonetheless adequate. Like the adjacent studio (plans and photos previous page), the living zone relies on the owner's art for ornament (opposite), and on architect Isozaki's sculptural way with volumes for character. At present, Bjornson sleeps on a high table under Andy Warhol's acrylic-on-canvas-with-silkscreen "Female Torso Triptych" (at right in photo opposite). Not just any table, Bjornson's bed, however. Like the dining and conference tables, it was designed by sculptor Klaus Rinka and crafted by Getty Museum artisan Ronald Bennett.

New products: Kitchens

1. Kitchen tree

For architects facing the problem of how to design the tiny apartment kitchen, Global Furniture may offer the solution. The demountable *Kitchen Tree*, manufactured in West Germany by Tecta, incorporates a granite cooktop, sink, wood chopping board, shelving, utensil holders, and a dishcloth rack that are attached to a 76-in.-high stainless-steel utilities' column. All the accessories can be customized in a variety of finishes, and adjusted in height and direction to suit the user's needs. Global Furniture, New York City.

Write 300 on reader service card

2. Cooker

The legendary British Aga cooker—a favorite of professional cooks and such luminaries as Paul McCartney, John Updike, and Princess Diana—is now available in the U. S.

Designed in the early 1920s by a Swedish Nobel Prize winner, Dr. Gustaf Dalen, it works on the principle of stored heat. Constant heat levels at different temperatures are simultaneously maintained in its roasting, baking, simmering, and warming ovens, which are vented to an outside flue. The custom-assembled cooker is fueled by gas or coal, and is offered in seven baked-enamel colors.

Aga, Stowe, Vt.

Write 301 on reader service card

3. Italian kitchen

The *Gres* kitchen is designed by the Venetian architect, Roberto Pamio, and manufactured in Italy by Arclinea. The sleek components include rounded safety edges on all the cabinet doors, the drawers, and the white ceramic tiles that cover the countertops and shelves. A lighting fixture runs the length of the hanging cabinets to provide direct illumination over the work surfaces. Accessories such as a retracting iron, sliding knife holder, paper towel holder, and spice drawer can be installed on a track system underneath the cabinets. IPI, Long Island City, N. Y.

Write 302 on reader service card

4. Mixer

The *KV1* single-control kitchen/bar mixer (shown with sink *Model 124*) is part of the manufacturer's brass *Sanitary Fittings* series. Designed by the Danish architect, Arne Jacobsen, and selected by the Museum of Modern Art for its design collection, the mixer features a double swivel spout that allows the direction of the water flow to be easily adjusted. It is compatible with American plumbing standards and is available in 10 epoxy finishes, polished brass, and chrome. Kroin, Inc., Cambridge, Mass.

Write 303 on reader service card

5. Tile

Dish Is It specializes in hand-painted, customized ceramic tiles such as *Sahara*, the speckled pattern installed in last year's San Francisco Decorator's Showcase kitchen designed by Dan Phipps (shown). Tile patterns can be specified in any combination of 70 standard colors, and in matte and gloss finishes. Matte floor tiles are also available, and the firm provides consultation for custom designs. Dish Is It, San Francisco.

Write 304 on reader service card

6. Italian tiles

This selection of 18 patterns from 9 manufacturers illustrates the diversity of Italian-made ceramic tiles now offered in the U. S. Included are geometric patterned, mottled, terrazzo-like, and textured tiles from Campeginese, L'Astoria, Gubbio, Artcolor, Gabbianelli, Toscana, Metroquadro, La Faenza, and Sant'Agostino. Italian Tile Center, New York City.

Write 305 on reader service card

7. Laminates

The manufacturer has introduced six new patterned and woodgrained, high-pressure laminates that are designed to coordinate with the manufacturer's *Color Grid* and *Color Trends* collection of solid colors. Included in this new line are *American Granite*, intended to simulate real stone, and *Papercraft*, meant to resemble fine, handmade paper with visible fibers. *Dust* (shown) features a grainy, sandlike surface in both matte and polished finishes. Formica Corp., Wayne, N. J. D. K. D.

New products: Bathrooms

1. Sink

Furniture designer David Zelman intended this bathroom sink to look like a metal sculpture, since it is located on the wall of a New York City apartment that is visible from the living room. The custom-built stainless-steel basin, brass fittings, and copper piping supported by steel brackets evoke a raw, industrial appearance that reflects the designer's approach to furniture and household objects. David Zelman Designs, New York City. Write 307 on reader service card

2. Pedestal sink

This 36-in.-wide, 24-in.-deep, wall-mounted marble counter with sink stands 30 inches off the floor. The pedestal lavatory is part of Kohler's new traditional line called *Console Tables*. A variety of leg styles, fittings, faucets, colors, and finishes are available; marble, vitreous china, or granite-like synthetic tops can be specified. Over 30,000 design combinations are possible, according to the manufacturer. Kohler Co., Kohler, Wis. Write 308 on reader service card

3. Faucet

The *Luxembourg Collection* has been introduced as part of the manufacturer's seven new lines of European-styled faucets. The single-handle, washerless faucet is constructed of brass, and is available in chrome, white, and red finishes. It features a replaceable cartridge system for low maintenance and easy repair. Moen, Elyria, Ohio. Write 309 on reader service card

4. Mirror

Designed by Rodney Kinsman for Bieffeplast, *Specchio Due* is now distributed in the U. S. by Gullans International. The unit's small, 25-in.-dia component features a magnifying glass on one side that rotates 360 deg on itself and swivels to either side of the larger, 55-in.-diameter wall mirror. The frame is available in chrome, black or white. Gullans International, Long Island City, N. Y. Write 310 on reader service card

5. Faucet

The *Coriandoli* series of faucets and fittings from Watercolors is now available in black, beige, blue, and polished gold finishes, in addition to white, red, yellow, and polished chrome. The line includes a single-hole basin mixer with swivel spout and pop-up waste (shown). In addition to this Italian-designed series, the company now offers a reproduction line of solid brass antique fittings and faucets imported from England. Watercolors, Garrison, N. Y. Write 311 on reader service card

6. Bathroom

The manufacturer offers a complete range of ceramic fixtures, tiles, and accessories in coordinated colors and designs for the bathroom. The *Toboga* group (shown) comprises glazed, nonvitreous tiles, a one-piece toilet and a bidet in 12 matte and glossy colors, and accessories, including a toilet paper/brush holder, towel bar, mirror, and shelf. Villeroy & Boch, Pine Brook, N. J. Write 312 on reader service card

7. Accessories

The *Celada* series features pegs for clothes and towels in hand-beveled crystal glass and chrome-plated brass that measure 4 3/4 in.-diameter, 4 in.-high, and 3 1/4 in.-deep. Included in the series are a smaller peg, wall sconce, towel bar, toilet paper holder, and toilet brush holder. Interna Designs, Chicago, Ill. Write 313 on reader service card

8. Bathtub

The Warren Platner-designed *Sensorium* tub with *Ambiance 2500* microprocessor control system boasts a variety of electronic and telecommunications options. A handheld remote automatically controls the water temperature, whirlpool speed, room lights, television, stereo, and security system intercom. American Standard, Inc., Piscataway, N. J. Write 314 on reader service card

9. Fittings

The *Excalibur* line of rectilinear fittings, faucets, and accessories is now offered in a combination of polished brass with satin chrome or completely finished in polished chrome. Bathroom Jewelry, Los Angeles. D. K. D. Write 315 on reader service card

What do you see?

At first, in your mind's eye, you begin to imagine just how a structure might look. Shape. Color. Detail. But, sometimes, traditional building materials inhibit your concept.

Now look again. What you see is really a rice field with contoured levels.

At first glance, many exterior insulation and finish manufacturers may appear to offer the same thing. But look closely. Get the entire picture. You'll soon see why Senergy product quality and service commitment are no illusion. Look again at your concept. Chances are, Senergy wall systems could provide the design freedom you want.

For a new perspective about Senergy Inc. please contact Bob Olson, Vice President, at 1367 Elmwood Avenue, Cranston, Rhode Island 02910, or call 1-800-221-WALL.

Cabinets, accessories, shelving, and storage components for kitchen, bath, and other areas of the house are shown in a 16-page color catalog. Cabinets in several woods and melamine laminate range in style from concealed-hinge European to Country. Merillat Industries, Adrian, Mich.
Write 408 on reader service card

Interior paints
Sample card holds color chips of all basic shades of *Regal AquaPearl* interior paint, higher in luster than eggshell finish, but softer than semigloss paint. Said to have a pearl-like sheen, the latex paint is particularly suited for kitchen and bath walls over any interior substrate. Benjamin Moore & Co., Montvale, N. J.
Write 409 on reader service card

Decorative tiles
Color folder highlights an in-stock and custom-design collection of ceramic and terra cotta tiles and accessories, both imported and domestic. Included are hand-decorated tile products for use on floors, walls, and counter surfaces in many residential and contract applications. Country Floors, Inc., New York City.
Write 410 on reader service card

Window blinds
A color chart displays all 158 colors, wood grains, metallics, and patterns of *Bali* micro- and mini-window blinds. Included are 26 new colors in a collection designed by Jack Lowery & Associates. Carey McFall Corp., Montgomery, Pa.
Write 411 on reader service card

Skylight Insurance

with no fine print
just fine lines and fine design
from Ventarama!!

Type of Coverage

VENTARAMA's unique molded edge outer dome of 1/8" acrylic leaves no seams or flexible sealants exposed to rain and ice. The thermoformed acrylic, longest lasting clear plastic available today, is the seal.

Exclusions

An interior mounted gasket of thermoplastic rubber eliminates the need for thermal breaks that could weaken the external frame. As a one piece gasket it -
1. seals the inner dome -
2. keeps the cold conducting aluminum frame on the outside -
3. seals the dome assembly to the copper flashing.

Underlying Insurance

VENTARAMA's 16 oz. copper flashing is designed with a rain gutter that keeps rain and ice melt out. This one piece flashing system is seamless to help prevent air infiltration. It installs in a fraction of the time it takes to put in a step flash or conventional flange flashing and it lasts — it's copper!

On pitched roofs, on flat roofs, as a roof window or a skylight — VENTARAMA gives you the insurance you need.

Write 423 on reader service card

Can you define a gazebo? Then design a gazebo ...and win a couple of thousand dollars.

At the risk of sounding like Ed McMahon, I'd like to present you with a check for \$2,000. And the promise that Vermont Creations Inc., of Arlington, Vermont, will try to construct your personally designed, award-winning gazebo, if it's buildable.

"This is not a gazebo."

That's right. This is my first-ever Vermont Structural Slate Company "Design a Gazebo Contest." The jury will choose the designs they think are most fun and award the following prizes:

- **1st prize** \$2,000 and Vermont Creations will build your gazebo
- **2nd prize** \$1,000
- **3rd prize** \$500
- **8 runner-up prizes** \$200 each.

Because I'm such a nice guy

"Vermont has only two seasons, winter and July!"

...and I'm anxious to get a lot of entries, you can enter as many times as you want. (\$5.99 fee for each entry.) What's more, your design need not call for slate in the building materials. (This isn't the kind of competition where you have to design a fireplace using plywood.) In fact, the use of slate will get you no brownie points.

I am a stickler for deadlines though, so please remember I must have your entry no earlier than October 1, 1987 and no later than October 26, 1987.

Entries will be juried on October 30, 1987 by, well, I don't know who yet, but they'll be exciting and different, and I'll let you know in my next ad. Watch for it.

So send for your application today.

Contest Rules

1. Open to any person who reads this ad except Vermont Structural Slate Company employees, suppliers, agencies and their families.
2. Design entries may be as simple or complex as you desire.
3. The design need not be an actual project. Existing, future or hypothetical projects are quite acceptable.
4. There are no specific requirements for design entries except that models and plans must be mailable. Any materials or techniques that you prefer will be acceptable.
5. The majority decision of the panel of judges will be final.
6. All entries must be accompanied by a "Vermont Structural Slate Company" Official Entry Blank.
7. All entries must be received between October 1 and October 26, 1987.
8. You may enter as many times as you like. There are no limitations on number of entries.
9. If it isn't fun, don't do it.

To get your application write to me, Bill Markcrow, at:

VERMONT STRUCTURAL SLATE COMPANY

Fair Haven, VT 05743

Or give me a call at: 1-800-343-1900.

Excellence in Concrete Design

Concrete Building Awards

Judges select six concrete buildings in North America

Architects honored for outstanding design

Awards Jury. This year's winning projects were selected by jurors (left to right) Harold Roth, partner of Roth and Moore Architects, New Haven, Conn.; Paul M. Sachner, senior editor of *Architectural Record*, New York City; Susana Torre, partner in charge of design at Wank Adams Slavin Associates, New York City; and William J. LeMessurier, principal structural engineer for LeMessurier Consultants, Cambridge, Mass.

JACK POTTLE/PHOTOGRAPHER

Lee A. Polisano (left), senior designer/project manager; Christopher Keeny, designer; Eugene Kohn, partner in charge, of Kohn Pedersen Fox Associates PC, New York, N.Y., for: the Tabor Center Office Towers, Denver, Colo.

This firm of 200 architects and planners was founded on the philosophy of design excellence, sensitivity to site, context, and the unique concerns of each client. With a growing reputation in the United States and abroad, the firm has expertise in corporate and bank headquarters, office and high rise buildings, mixed use, hotels, master planning, and feasibility studies. Recipient of many awards.

SHARIS PHOTOGRAPHY

Henry D. Hom (left), project architect, and Edward M. Tower, designer, Daniel, Mann, Johnson, & Mendenhall, San Francisco, California, for: Roundhouse Plaza, San Francisco, California.

Daniel, Mann, Johnson, & Mendenhall (DMJM), consistently ranked as one of the nation's leading multidisciplinary architecture, engineering, planning, and construction management consulting firms, is headquartered in Los Angeles with two dozen offices worldwide. Since its founding in 1946, DMJM has completed assignments exceeding \$20 billion in construction value.

GALEN DOLIN

Adi Mistri (left) and Richard Grubbs, project architects; Howard Neumann, project manager; and Philip Shive, director of architecture of J. N. Pease Associates, Charlotte, N.C., for: Charlotte-Mecklenburg Government Center Garage.

Founded in 1938, J. N. Pease Associates is a 120-person architectural-engineering-planning firm with headquarters in Charlotte, North Carolina, and an office in Research Triangle Park, North Carolina. Major projects include Mecklenburg County Criminal Courts Building and Intake Center, the 800,000 sq ft Duke Power Electric Center, North Carolina Center for Public Television, North Carolina Biotechnology Center, new facilities for Underwriters Laboratories, North Carolina Central Prison, and the Charles River Laboratories.

Alan Maples (left), designer and project architect, and Ron Nelson, partner in charge, of Thompson Berwick Pratt & Partners, Vancouver, B.C., for: Pulp and Paper Research Institute of Canada, Vancouver, B.C.

TBP is among Canada's oldest architectural firms, with over 75 years experience in every field of building design and community planning. The firm has designed and built a multitude of projects from one-room schools to resort complexes while spanning the generations between the Age of Steam and the Age of Microchip. TBP architecture balances innovative design with a respect for regional context and tradition.

Theodore Long (left), project architect, and E. San Martin, joint venture project director, New York City, for: North River Water Pollution Control Project, Advanced Preliminary Treatment Plant, New York City.

The North River Plant was designed by the joint venture of Gibbs & Hill, Inc.; Tippetts-Abbett-McCarthy-Stratton; and Feld, Kaminetzky & Cohen, P.C. Principal design functions of each of the joint venture firms were Gibbs & Hill, Inc.—process mechanical and electrical; Tippetts-Abbett-McCarthy-Stratton—architectural, structural, HVAC, and utilities; and Feld, Kaminetzky & Cohen, P.C.—structural.

John A. Coons (left), senior associate, and John R. Orcutt, principal, of Sasaki Associates, Watertown, Mass., for: Charleston Waterfront Garages, Charleston, S.C.

The 275 professional and technical personnel of Sasaki Associates provide planning, architecture, landscape architecture, civil engineering, environmental services, interior design, and graphic design to national and international clients. Projects include office and commercial mixed use facilities, urban and waterfront developments, large-scale resort and residential communities, and college and university campuses.

Write for information about the 1988 Concrete Building Awards competition.

See *Architectural Record*, January 1987, page 44, for a description of the current winning buildings.

Rapidograph® Renderings

by Pennsylvania ar

A keen eye for detail and a deft hand for expression provide Joseph Voelker of Springfield, Pa., with a mastery of pen-and-ink rendering of his subjects — particularly architectural subjects. Artist Voelker's pen is the Rapidograph® technical pen with tubular nibs that allow the artist to stroke in virtually any direction on the drawing surface, much the same way a pencil is used. This is the great advantage of the Rapidograph® pen over conventional

pens, such as the crow quill and fountain pen which, for the most part, cannot be stroked up —against a paper grain.

This versatility of movement in pen-and-ink drawing contributes to faster completion of drawings, which might account for artist Voelker's prolific nature: In addition to his commercial and graphic arts output, he has created a series of fine-art drawings of famous and historical landmarks in and around the environs of Philadelphia, of which

these illustrations are only a few.

Rapidograph® renderings present your architectural designs in the clearest light possible . . . good ideas translated into exciting visuals. These drawings by Voelker are examples of precision-clear interpretations which can be presented for any project — a restoration, a conversion, a modern highrise, a neoclassic structure, and so on. Such drawings can have a free-hand abandon or be developed with minuscule refinement to hold details in photographic blowups.

The tubular nib is available in 13 line widths. Just the weight of the pen itself and the handhold to keep the pen erect provide a consistent ink laydown. The designer, drafter or artist has only to guide the pen with an easy, non-fatiguing hold. The patented dry, double-seal cap keeps ink throughout the balanced ink-flow system ready for instant startup, contributing to optimum drawing time. Refillable ink cartridge also helps keep productivity high. The Rapidograph® pen is designed for use with carbon-black india drawing inks that dry waterproof and smear-proof, allowing the artist to enhance drawings with other media, such as colored drawing ink and watercolor washes, or even pastels and colored pencils.

Look for the *Koh-I-Noor Rapidograph®* on the pen to be sure of the dependability and ease of performance that make the Rapidograph® pen the most widely used technical pen in the United States and Canada.

There's a timeless quality to carpets made with

tron® 3D.

Ultron® 3D is a registered trademark of Monsanto Company.

Circle 70 on inquiry card

ULTRON® 3D
Monsanto
Contract Fibers

Ultron® 3D fiber from Monsanto imparts some special qualities to carpets. Qualities like an unusually lustrous appearance. A remarkable ability to keep soiling minimal, and out of sight. Extra-strong abrasion resistance. And quick bounce-back even under heavy traffic loads.

Carpets made with Ultron 3D fiber retain their color, hand, and luster cleaning after cleaning. Year after year.

No other advanced nylon fiber can outperform Ultron 3D.

You can specify Ultron 3D with confidence. And you can get Ultron 3D in the exact carpet you're looking for. Ultron 3D is available in a wealth of carpet colors and patterns.

For a complete list of carpet makers who weave with Ultron 3D (and for our gift to you of a free designer's scale), please write:

Bob Docherty, Monsanto Company,
320 Interstate North Parkway,
Atlanta, GA 30339.

Steel tables

These small-scale (20-in.-high) occasional tables, fabricated by designer Will Stone of burnished steel, have wavy legs fastened to circular tops by brass acorn-headed bolts. The tables and candlestick shown here are part of a collection of the designer's architectural ironwork that includes gates, grilles, railings, and fireplace screens in steel, iron, and brass. Giles & Lewis, New York City. Write 316 on reader service card

Halogen lighting

The sail-like reflector is the main design element of this wall bracket from *Luceptan*; it may be moved to direct the light from a 300W halogen bulb either onto or away from the wall. The lacquered aluminum screen is available in green, red, black, or white. Model D5 also comes as an adjustable-height standing lamp. Artemide, New York City. Write 319 on reader service card

Streamline revival

The original styles of *Jazz Collection* furniture are based on the elements of the American Art Deco/Streamline Moderne period of the '20s and '30s, according to designers David Lee Meno and Marina McDonald. This *Zephyr Club Chair* includes several elements integral to the line: tubular chromed-steel trim; hardwood frames; and upholstery in leather, stock fabrics, or COM. The *Jazz* line also includes tables, ottomans, daybeds, sofas, and accent pieces such as torchères, magazine racks, and fireplace/radiator screens, all available in custom sizes, colors, and finishes. Jazz, West Hollywood, Calif. Write 317 on reader service card

Architectural fabric

Fabrics designed by Charles Rennie Mackintosh are now available to the contract specifier. Pictured is "Tulips & Checks," a reproduction of an original textile in the collection of the Hunterian Art Gallery, University of Glasgow. Printed using as many as 20 separate screens by Edward Turnbull and Co., these and other Mackintosh patterns are offered in both original and revised colorways. Ian Wall Ltd., New York City. Hartco Pattern-Plus.®

The hardwood floor you design yourself.

Pattern-Plus has four lengths, one width, three colors. Mix or match to create thousands of designs.

Hartco Pattern-Plus offers architects and designers unparalleled freedom in flooring design.

With the Pattern-Plus system of factory-finished hardwood flooring units you can create almost any pattern your mind can conceive. Four modular lengths (9", 18", 27", 36"), one width (4½"), three colors — to mix, match, combine in a dazzling variety of designs. Everything from simple strip or plank effects to parquets, herring-bones, even one-of-a-kind patterns to fit a specific space.

And Pattern-Plus is made tough enough to take it — even in high-traffic commercial installations. In a state-of-the-art process, acrylic and stain are forced under pressure all the way through the oak to make it harder than hardwood. It resists stains, spills, scarring. Color won't wear away.

Pattern-Plus has tongues and grooves engineered and precisely machined to lock together, give you a smooth, even floor every time.

And all this at a price comparable to top quality vinyl or carpet.

Pattern-Plus hardwood flooring. Designed for designing. Custom floors without premium prices.

For samples of Pattern-Plus and a catalog that shows applications of all Hartco flooring products call your Hartco distributor. Or contact Hartco, Inc., P.O. Box 1001, Oneida, TN 37841-1001. (615) 569-8526.

 The Quality Wood Flooring
Hartco® Flooring

Circle 74 on inquiry card

Surprisingly, comfort in this desert setting meant the more windows the better.

And Pella is the better window.

Historically, comfort in desert architecture meant thick adobe walls punctured by small windows. No more. In this Arizona home, walls of Pella Windows and Sliding Glass Doors invite the glorious view indoors and leave the dust and heat outside.

Pella engineering allows this 4200-square-foot home to be oriented around the south pool and courtyard, taking advantage of the sun rather than hiding from it.

This Santa Barbara style home recalls the strong adobe masses, Mission tile roofs, hand-plastered walls and softly curved lines of indigenous Southwest architecture. Yet all is designed for the utmost in modern ease. Including Pella Windows and Sliding Glass Doors. With low maintenance aluminum cladding outside, the substantial look of wood inside, energy performance all around.

Pella's custom clad colors, shapes and sizes

offer unlimited design flexibility. But for this home, Pella's tremendous range of standard fixed, casement and awning windows and eight-foot-tall sliding glass doors easily met the requirements.

The flexible Pella Clad System.

To capture mountain vistas in the nook overlooking the pool, a gentle curve of fixed and sliding door panels is topped with fixed awning windows that reach the ceiling. The flexibility of the Pella Clad System not only makes such a custom design readily available, but gives it the clean, finished look of a single unit.

Pella aluminum cladding with baked enamel finish assures exceptional resistance to fading, chalking, chipping and cracking in the harsh sun. So it needs no painting.

Strategic placement lets in breezes and keeps out dust.

This home employs banks of operable Pella Casement Windows that catch cooling breezes, cutting air conditioning costs for as much as six months of the year. Sliding glass door panels lock open a few inches for added ventilation.

Pella weathertight construction exceeds all industry standards for air infiltration. So dust infiltration is no problem either. What's more, the harder the wind blows against the sliding glass doors, the tighter they seal.

Specify Pella Sunblock™ glass for warm climates or Pella Heatlock™ glass for cool.

You'll be providing a roomful of light and comfort, without glare or faded furnishings. Type E Slimshade® blinds, tucked between the panes of glass, help give the Pella Climate Control Window System™ even more flexibility. And Pella wood construction is a fine natural insulator itself.

So whatever the elements impose on your designs, talk to your Pella distributor. Look for Pella in the Yellow Pages under "Windows", call Sweet's BUYLINE or see Sweet's General Building File. Or send the coupon below.

Please send me the latest literature on Pella for replacement and new construction.

WHAT YOUR MIND CAN CONCEIVE, OUR HANDS CAN CREATE.

Marvin Round Top windows are available in more sizes and shapes than any other arched windows.

If you want a casement window with a Round Top, we'll build you one.

If you want an 18-foot high Round Top with true divided lites, we'll build you one of those.

Or, if you want an Oval Round Top six-feet wide, we'll build that for you, too.

EVEN WE DON'T KNOW HOW MANY KINDS OF ROUND TOP WINDOWS WE OFFER.

That's because our Round Top windows are made to order. And virtually every day, somebody asks us to build one in a new size or shape.

In fact, if we can't build the window you have in mind, it probably can't be built.

NO MATTER HOW DIFFERENT THEY APPEAR, OUR WINDOWS ARE ALL MADE THE SAME WAY.

Carefully. With much of the work done by hand.

Designs, such as Gothic true divided lites or a hub with spokes, are handfitted to ensure proper fit.

And matched pieces of Ponderosa pine are meticulously fitted together to form a sturdy arch that will accept a beautiful stain-and-varnish or

paint finish. A polycron exterior finish is also available. (This finish has been proven to last at least as long as aluminum or vinyl cladding.)

THEY'LL STILL SEEM BEAUTIFUL AFTER THE HEATING BILL ARRIVES.

They're available with either half-inch or one-inch insulated glass. We offer triple glazing for increased energy conservation. Storm sash are also available.

For more information, send us the coupon, or call 1-800-346-5128 toll-free. In Minnesota, 1-800-552-1167.

WOOL

The standard by which all other fibers are judged.

Consider wool. From any viewpoint, wool outperforms all other fibers. Technically, no other fiber provides the resilience, durability, easy maintenance and inherent flame retardance that contract interiors demand. From a physical standpoint, you've always known that wool offers matchless beauty

that endures. And now, from the aspect of versatility, there's more variety in pure wool upholstery, broadloom and carpet tile making possible the integrated wool environment you've always wanted.

In the past it's been hard for other fibers to match the benefits of wool. Now it's even harder.

**Design with FULLSPACE...
And put space in its place.**

When you incorporate Lundia Fullspace mobile storage systems into your interior you gain many advantages. For one, optimal space utilization for the important things...space for people...and productivity. Also, you gain in added user satisfaction with the most efficient filing and storage system available.

Shrink space, slash costs

Fullspace systems save up to 50% in floorspace by eliminating permanent aisles. The space saved leaves more room for a functional, productive work environment. It allows a more compact floorplan too. So, condensed space means lower construction costs, lower future costs for the owner.

Lundia offers specifiers and users complete design assistance and full turnkey service.

EVEN UNDER THE HARSHTEST CONDITIONS DUPONT ANTRON[®] THRIVES.

Whatever the problems your interior environment poses, DuPont Antron can weather them all. DuPont Antron nylon is specifically designed for tough conditions. It gives the best protection against crushing and matting. And it handles soil and stains like no other carpet fiber can.

What's more, Antron handles all your design needs, too. By offering the widest range of colors, textures, and styles, Antron can help you find precisely what you want.

Maybe that's why so many architects and designers put their trust in Antron. And why they've made Antron the number one specified carpet fiber in the country.

Find out more about the Du Pont Antron family of fibers in the Du Pont Antron Specifiers Guide. For your free copy, call 1-800-448-9835.

THE ANSWERS COME EASY WITH ANTRON[®]

Fabric shades

Pleated *Duette* shade fabric is said to be ideal for covering all types of unusual windows such as trapezoids, octagons, and the round-top window shown here. The shade material can be installed in sizes up to 14 1/2-ft wide by 12-ft high, in one seamless expanse with no tapes, visible cords, or cordholes. The fabric's air-trapping honeycomb construction gives it an insulating R-value of 2.2. Hunter Douglas Inc., Upper Saddle River, N. J.

Sitecraft wood designs make it a site to behold.

Nothing warms up a site (and the people who use it) like the natural beauty of wood furnishings. Especially durable, graceful furnishings from Sitecraft.

You can suit virtually any site from our wide selection of standard benches, planters, planter benches, receptacles and other site accents. And should you have special requirements, we can accommodate you with custom site furnishings. For years we've worked closely with architects, landscape architects and designers satisfying their creative concepts.

All Sitecraft furnishings are painstakingly built by craftsmen who have been creating fine

wood products for over four generations. Woods range from clear all heart California redwood to super-tough "Ipe", Purple Heart, Philippine Mahogany and other select woods.

To discover all the choices available to you, send for our full color catalog. Write or call Sitecraft, 40-25 Crescent Street, Long Island City, NY 11101, (718) 729-4900. Outside NY State call toll-free **800-221-1448**.

**NEW SUMMIT SHINGLES, FROM GEORGIA-PACIFIC.
BECAUSE SOME SHADOWLINES ARE
MORE DISTINCTIVE THAN OTHERS.**

Introducing the Summit difference—the rich, textured, three-dimensional shadowline of Summit® and Summit® III laminated architectural shingles, new from Georgia-Pacific.

The look that sells, the look that lasts.

Summit's distinctive profile is naturally-enhanced by darker granules strategically placed along each shingle's shadowline. That means the deep, handsome texture is "built-in." In fact, rugged, 300-lb. Summit III fiberglass shingles carry a 35-year limited warranty¹ (240-lb. Summit, 30 years) and a UL Class "A" fire resistance rating.

Field-engineered for quick installation.

Summit shingles cover with only 72 pieces to the square, and are smaller than metric shingles for easier handling.

Plus, Summit features built-in nailing lines for instant accuracy and seal-down adhesive strips on the bottom side of each shingle that eliminate the need to manually seal the first course to the starter strip.

Summit shingles can be applied directly over wood shakes or shingles, too—with little or no roof leveling or special furring strips required.

¹ See warranty, available from Georgia-Pacific, for its terms, conditions and limitations.

² Limited distribution west of the Rocky Mountains.

**Now appearing across the country,
in five distinctive colors.**

New Summit architectural shingles are available exclusively from your nearby Georgia-Pacific

Why are American architects Specifying Solarroll® more than any other exterior shutter system?

Because Solarroll® is the answer to practically every concern an architect may have regarding the vulnerability of sliding glass doors and windows. Solarroll® provides the functions of security...privacy...shade...insulation...and storm protection. And yet, the appearance of our system is complementary to almost any architectural design.

Another reason is our services to architects, such as assistance at preliminary design time, and at the budget preparation stage, on projects ranging from single-family homes to multi-story structures.

Why are more and more architects specifying Solarroll®?

**Because in product design and service,
Solarroll® is a shade better than the rest.**

Solarroll® can be specified with manual hand crank or Somfy® motorized controls.

Unglazed tile technology breakthrough: Specifiers find Quantum II Stain Shield has no "equal."

"The unglazed tile specified for the Holmes Oldsmobile/Honda showroom floor had to be extremely durable to accept the weight of automobiles," stated Bryan Shiffler, of Shiffler Frey Baldwin Clause Architects PC. "The owner was adamant about low maintenance, stain resistance and long life. It had to be impervious to showroom stains such as motor oil and gasoline and it had to be slip-resistant because of customers tracking in snow and ice. It also had

to give the showroom the sophisticated look the owner wanted."

"We tested literally dozens of unglazed tiles for stain resistance, at one point even using battery acid, which we baked on. We managed to damage virtually every tile except Quantum II Stain Shield. We couldn't believe that we simply could not stain it! With anything. In fact, Quantum II Stain Shield certainly has lived up to our client's expectations since it was installed."

Total particle fusion makes Quantum II Stain Shield virtually impenetrable.

Depending on your viewpoint, the arguments for and against using unglazed tile have been universal. For the specifier... the wearability, through-body color and slip resistance have made unglazed tile an excellent choice for the high traffic areas such as airports or shopping malls. However, unlike glazed tile, virtually all unglazed tile manufactured today proved susceptible to staining, particularly the popular lighter colors. This is because virtually all unglazed ceramic tile manufactured today has small "pores" throughout the tile body which allow stains to penetrate. Even the best unglazed tiles, with as low a water absorption as .1%, can be permanently stained with the tough stains such as motor oil, red wine, grease, shoe polish or felt marker. Owners who like the superior wearability of unglazed tile had to accept the prospect of expensive maintenance. Generally, sealing the tile was the only alternative to the staining problem, and even then, after significant investment in labor and maintenance, the toughest stains could not be eradicated.

Buchtal recognized the advantages as well as the drawbacks of unglazed

ceramic tile and launched project Quantum II Stain Shield, a product research and development project with the objective to produce the first unglazed ceramic tile that could not be penetrated by stains. In order to understand the staining problem, one has to look into the microscopic structure of the tile body. The tile body is made up of numerous minute particles of clay and other materials. Microscopically, these particles form layers similar to layers of tiny balls. During firing, the heat of the kiln starts a process similar to that of spot welding. The particles are partially fused together at points throughout the tile body to form a strong matrix which becomes the durable unglazed tile. These points of fusion or "spot welds" provide great structural strength and rigidity, but as in a spotwelded container,

they cannot prevent liquids from penetrating. Similarly, even the densest unglazed tiles can also be penetrated. Buchtal sought the answer to obtaining "total particle fusion" in all areas of the tile which needed to be impervious to stains. The result was Quantum II Stain Shield. The Buchtal process of "total particle fusion" resulted in an unglazed tile surface with 0.0% water absorption which rendered the tile virtually impervious to even the toughest stains. Since the first production run was tested, Quantum II Stain Shield has met or exceeded the demanding criteria that were established at the onset of the project. Quantum II Stain Shield was challenged with the toughest of stains — dirty motor oil, acid, red wine, lipstick, felt markers, mustard, shoe polish...they were all easily

removed. Its cleanability surpassed all expectations. In the majority of cases, cleaning with a mild detergent was all that was necessary to eradicate the stain. Non-watersoluble stains were easily removed with an organic solvent such as acetone.

Quantum II Stain Shield is available in nine architectural colors, both in neutral and accent tones, and in six modular sizes (4x4, 4x8, 6x6, 8x8, 10x10, 12x12) to complete the program.

Buchtal, who first became known for its large size Keraion® tiles, has maintained a leadership in ceramic tile development. Known for their innovative technology for over 50 years, Buchtal once again listened and responded to the market demands and has added yet one more "first" to their growing list of achievements.

Sample program available to the industry.

Judged to be one of the best ceramic tile sample programs in the industry, the Quantum II sample board is available to industry professionals

upon request. It includes a sample of each of the nine colors and product specifications. Call (404) 442-5500 for requests.

Quantum II meets the food court challenge. And we'll prove it to you.

Because we think you have to try Quantum II Stain Shield to believe it, Buchtal has developed "Quantum II stain kits," which will readily demonstrate its stain resistance properties; we invite your comparison with other unglazed products.

For your free stain kit, please call or write to Buchtal Corporation.

STEEL WINDOWS

REDEFINED BY HOPE'S

For generations we've associated steel windows with narrow sight lines, with near Herculean strength and with durability. We've also associated steel with two types of window construction: heavy intermediate or factory type. Now Hope's has redefined steel window thinking by introducing two additional types of design and fabrication to the line. The Landmark Series gives you all the advantages of heavy intermediate windows with even narrower, more elegant sightlines. The Builder Series offers steel windows for residential and light commercial projects at a truly economical price. For information on the entire custom line that can redefine what steel windows mean to you, call or write:

The message is

The medium is

Winner of the 1986 Gold Nugget Grand Award from the Pacific Coast Builders' Conference, the Villas and Offices at Sweetwater, Sugarland, Texas, present a skyscape of arresting design.

A major unifying element throughout this mixed use development, is the choice of Dryvit exterior insulation and finish system (EIFS) for exterior walls. Towering chimneys of Dryvit EIFS further unify the whole, while making a strong design statement of their own.

Dryvit Outsulation has a unique ability to conform to an architect's concept with cost-effective ease. Design flexibility comes naturally with this System. Contemporary? Shadowing and monolithic sweeps can be startlingly beautiful thanks to the System's joint-free application possibilities. Period detail? You can enjoy the full grandeur of 18th Century quoins and pilasters without the labor-intensive use of brick or stone. When you use Dryvit — rather than precast concrete — rounded corners, recessed arches, and three-dimensional effects shape up fast and economically.

Instead of working with costly metal or wood, create sculptured shapes handsomely for less. This is particularly true when working with logos or graphic designs. They can be incorporated with the wall as the System goes up. With panelized projects, these design elements can be prefabricated, saving valuable on-the-wall labor hours.

design freedom.

Dryvit® Outsulation®

Why Dryvit? Only Dryvit has the experience and proven success behind it. Over 60,000 buildings in North America, alone, show why the pioneer in exterior insulation and finish systems has consistently lead the way in growth, testing

and technical service back-up in the field. Our area representatives and headquarters professional staff are at your call.

You can look to the leader to provide your concepts with the medium to do them justice. For more information, call toll free 800-4-DRYVIT.

Oven/microwave

This built-in double unit contains a full-size microcomputer-controlled microwave on top, with an electric self-cleaning thermal oven underneath. The 30-in.-wide oven features automatic sensors that halt the cooking process when the set level of temperature is reached. Doors are black glass. Whirlpool Corp., Benton Harbor, Mich. Write 374 on reader service card

FIBERMESH

State-of-the-art secondary reinforcement that can't be misplaced in concrete

Today we don't have to settle for the wire mesh method and gamble on it being in the right place. Technology has developed **Fibermesh Fibers**, a far superior system of engineered secondary reinforcement which provides automatic Hi-tech protection in both concrete's plastic and hardened state.

Fibermesh increases concrete's natural ability for lasting integrity.

Plastic shrinkage cracks generally pass through the entire slab and form planes of weakness permanently lowering the integrity of the structure.

Fibermesh provides concrete with necessary protection from plastic shrinkage cracking during its vulnerable early life. It's during this critical period, before concrete

develops its own integrity, that the millions of uniformly distributed "crack inhibitors" produced by the Fibermesh system are so vital.

Concrete should be designed to perform to the high degree of which it is capable. The addition of Fibermesh Fibers with their unique secondary reinforcing capabilities is a necessity for all quality concrete.

Benefits of secondary reinforcement		
Features	Fibermesh	Wire Mesh
Reinforces against plastic shrinkage crack formation	Yes ✓	No
Holds cracks together	Yes ✓	Yes ✓
Reinforces against impact forces	Yes ✓	No
Reinforces against shattering	Yes ✓	No
Reinforces against abrasion	Yes ✓	No
Reinforces against water migration	Yes ✓	No
Rust proof	Yes ✓	No
Corrosion resistant	Yes ✓	No
Minimum required concrete cover	-0-	1"
Tensile strength yield—ksi	80 - 110	65 - 70
Always positioned in compliance with codes	Yes ✓	No
Safe and easy to use	Yes ✓	No

This SICO® Room Maker is a sale maker.

Condominiums, townhomes, conversions—any home that makes better use of space has the competitive edge today. And you can offer prospective buyers two rooms in the space of one with The SICO Room Makers® Modular Wall and Bed System. They'll know you put extra thought and quality into your units. And quality sells itself.

Stack up the components with any bed size to make any room a sophisticated, comfortable bedroom. In the morning, fingertip pressure lifts the bed to conceal it in the wall system for a handsome daytime environment.

You can have delivery on any combination of modular components: shelves, night stand, three-drawer, two-door, glass-door display units and pull-down writing desk. For real comfort, select the queen, double or twin bed with quality mattress and vinyl upholstered box spring or foundation.

The SICO Room Makers Wall System is less costly than built-ins, with all the quality SICO is known for around the world. It just may be your best new salesman. Call or write today for full information.

MIRAFI PRESENTS

MIRADRAIN™

PREFABRICATED DRAINAGE STRUCTURES

Original
Miradrain 4000
2-sided drainage

NEW
Miradrain 6000
1-sided drainage

The proven alternatives to aggregate drains

As the innovative leader in geotextile technology, Mirafi Inc has revolutionized the design, construction, and cost effectiveness of subsurface drainage systems with Miradrain.

Miradrain prefabricated drainage structures consist of a waffle-like plastic drainage core covered on one or both sides with Mirafi filter fabric. The fabric allows water to pass freely to the drain core while preventing soil particles from entering and clogging the drain system. The 3-dimensional fabric-covered core provides effective flow channels for the water in all directions.

MIRADRAIN 4000 The original Miradrain 4000 offers a plastic drain core with two-sided flow channels and a filter fabric cover. This lightweight prefabricated drainage structure is ideally suited for 2-sided drainage applications such as bench cut or trench cut drains and pavement edge drains.

MIRADRAIN 6000 As a result of continuing research and development, and careful attention to the waterproofing requirements of engineers and architects, Mirafi has developed Miradrain 6000. This prefabricated drainage structure is

easy to handle, easy to install, and especially designed for applications where drainage is needed on only one side. In addition, Miradrain 6000 offers higher compressive strength and a higher flow rate than competitive systems. Plus, its single-sided configuration provides maximum compatibility with waterproofing systems.

Both Miradrain systems offer substantial time, labor, and, in many cases, material savings over conventional aggregate drains. For more information, write or call your Mirafi representative. Or, contact: Mirafi Inc, P.O. Box 240967, Charlotte, NC 28224. Phone-toll free: (800) 438-1855. Or, (704) 523-7477. **Circle 108 on inquiry card**

The construction industry McGraw-Hill information.

From the highest high-rise to the humblest home, building projects need McGraw-Hill information to get off the ground. Our Construction Information Group helps lay the foundation for almost every new building in America.

Every business day, for example, our F.W. Dodge Division mails out 1.5 million sales leads to over 60,000 customers. The famous Dodge Reports are the product of over 1,000 reporters and correspondents, the largest news gathering network of its kind.

Contractors and suppliers study DodgeSCAN microfilm reproductions of drawings and specifications. Project estimates are prepared using Dodge publications, software and on-line estimating services.

Construction planners tap into F.W. Dodge/DR the world's largest construction and economic database and the source of the most authoritative building forecasts.

Walk into almost any architect's or builder's office and you'll find Sweet's Catalog Files. Each year up to

Builds on

...volumes and 55,000 pages of bound and indexed product catalogs are compiled to serve the different segments of the construction industry.

Black's Guide is *the* reference, marketing and planning tool of the office space market, published in annual editions.

Four McGraw-Hill construction magazines are considered leaders in their categories: Architectural Record, Electrical Construction & Maintenance, Electrical Wholesaling and ENR.

Every day 167,000 construction-related firms use McGraw-Hill information in some way. That's what we call building on strength.

Look at the environmental impact of a Roto roof window. It extends daylight. Creates and enhances space. And Roto is mostly glass – high efficiency Low-E glass. Lets in lots more sunlight. Holds in more heat than triple-glazed windows. Eliminates over 70% of fabric-fading ultra violet rays. For details on fixed and venting models, plus options, see Sweet's 708 ROT. Roto Frank of America, Inc., 1-800-243-0893.

Use your STAC number!

XXXXXXXXXX5-DIGIT 69699
 6400 009876543-2 FEB90 S07
 TERRY DOE, TD & ASSOCIATES
 128 MAIN STREET
 ANYTOWN IL 69699

Need product information fast? Your Architectural Record Subscriber Telephone Access Card number can help speed information to you about any product or service in these pages.

Architectural Record's exclusive STAC number system enables you to call and key your "more information" requests directly into our computer via touch-tone telephone. If you've previously received a STAC card, it carries your number. However, you may find it easier to just check the mailing address label on each issue—your personal STAC number is conveniently listed above your name. **IMPORTANT:** Your STAC number starts after the first four numbers and is separated from them by a space. If your STAC number starts with one or more 0s, ignore them, as well as the hyphen. (For example, the STAC number on the above label is 98765432.)

Soon after your call, advertisers can access your requests by phone from our computer, and start speeding information to you. So when you need information fast, free help is as close as your STAC number. And STAC service is available to you 24 hours a day, seven days a week.

BEFORE YOU DIAL:

- Write your STAC number in the boxes in Step 4 below. Do not add leading zeros.
- Write the Reader Service numbers for those items about which you want more information in the boxes in Step 6. Do not add leading zeros.

CALL STAC:

- Using a standard touch-tone telephone, call 413/442-2668, and follow the computer-generated instructions.

ENTER YOUR STAC NUMBER AND ISSUE NUMBER:

- When the recording says, "Enter your subscriber number..." enter your STAC number by pushing the numbers and symbols (# or *) on your telephone keypad. Ignore blank boxes. Enter:

#

- When the recording says, "Enter magazine code and issue code..." enter these numbers and symbols:

#

ENTER YOUR INQUIRIES:

- When the recording says, "Enter (next) inquiry number..." enter the first Inquiry Selection

Number, including symbols, from your list below. Ignore blank boxes. Wait for the prompt before entering each subsequent number (maximum 17 numbers).

1.	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	#	#
2.	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	#	#

17.	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	#	#

END STAC SESSION:

- When you have entered all your Inquiry Selection Numbers and the recording prompts, "Enter next inquiry number," End the call by entering:

* 9 1 # #

If you are a subscriber and need assistance, call 212/512-3442. If you are not a subscriber, fill out the subscription card in this issue, or call Architectural Record Subscription Services at 914/628-0821.

Our Beauty Is More Than Skin Deep.

• Virtually impervious to absorption for long life and low maintenance.

• More than skin deep, the beauty goes all the way through.

Porcelain tile with through-body color is beauty that won't grow old.

Genesis™ porcelain tile is available in beautiful monochromatic and granite-like colors. Genesis is offered in unpolished, polished and textured surfaces in a wide array of sizes. Genesis can be used in interior and exterior floor and walls.

Now manufactured for the first time in the United States, Genesis is the "ultimate surface". Technology and premium raw materials combined to create a product that has through-body color that won't wear out. A surface hardness greater than granite and water absorption under .01% make for easy maintenance.

Genesis™, the "ultimate surface" combines form and function to offer the discriminating specifier the best of both.

BEFORE YOU BUILD, YOU SHOULD KNOW EVERY TRICK IN THE BOOKS.

The books are Passive Solar Design and Construction and Living with the Sun. And they tell you all you need to know to build the homes more and more consumers want — passive solar homes.

Best of all, they are free from PPG.

Passive Solar Design and Construction starts at the beginning — why passive solar is an opportunity you shouldn't miss. It discusses design basics, site selection and performance analysis, and concludes 34 pages later with a list of sources for even more information.

Since glass is a major element in passive solar, PPG wants you to know the facts. That's why PPG prepared this brochure. It's complete

and authoritative. And it's yours for the asking.

We'll also send you Living with the Sun, PPG's book for homeowners on passive solar. And we'll tell you how to get copies for your customers. Living with the Sun could help you make passive solar sales, because it explains the significant cost-saving benefits of passive solar, and how easy they are to get.

Passive solar is a trend that will have a big impact on new home building. You owe it to yourself to know every trick in the books. Write us to find out. PPG Industries, Inc., Glass Advertising, PT31, P.O. Box 8727, Harrisburg, PA 17105.

This home, designed by Dominique Gettliffe, Woodland Park, CO. Constructed by Lee Cerioni of Terra-Sol Inc.
